Adaptability: the Secret of Baking Success

Pertinent Facts About the Federal Food Act

3 Times Daily-your Bread MUST FACE THE TEST

The proof of the pudding—or bread, is in the eating. The verdict of those who gather around the meal table three times daily soon shows up in your sales and profits.

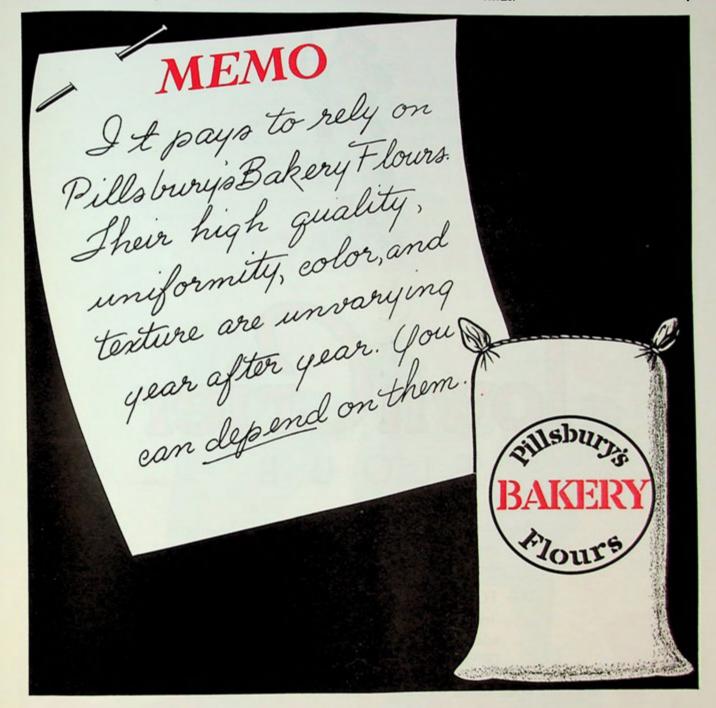

Seal of Minnesota Spring Wheat Flour can help swing any jury of public opinion your way because it produces a better loaf of bread. The excellence Seal of Minnesota Spring Wheat Flour adds to your loaf will add to your volume and your profits.

What better talking point can you stress in your advertising and what better words can you put in the mouths of your sales people than "Our bread is made with Seal of Minnesota Spring Wheat Flour," because Spring Wheat Flour is, and means, in the public Mind, the best bread flour in the world.

Seal of Minnesota Spring Wheat Flour in your shop also means the best in performance and loaf quality. You will find it your lowest cost bread and sales improver.

PILLSBURY FLOUR MILLS COMPANY, MINNEAPOLIS, MINN.

Town Crier FLOUR

Any and every baker is entitled to charge what he pays for TOWN CRIER FLOUR to his production cost.

Then TOWN CRIER FLOUR is entitled to be credited with what the baker gains through improved salability and customer favor by baking TOWN CRIER FLOUR.

What counts isn't what it costs the baker to bake a loaf of bread but what it costs him to bake and sell a loaf of bread at a profit.

And that is where TOWN CRIER FLOUR comes in.

THE MIDLAND FLOUR MILLING CO.

KANSAS CITY

FROM childhood we look up to those who provide leadership... we even place on a pedestal certain products that stand out above others. You can put your bread on a pedestal in your community by using bakery flours milled by "Standard". Their uniform high quality is an ageold tradition of the milling industry.

Not Many Bakers Can "Out-Smart" Millers When It Comes to Quality for Price Paid

Any miller can meet almost any price he wants to meet—even protein-ash requirements—by buying cheaper wheat and milling it differently. Nearly always the buyer gets what he pays for. We simply do not mill that way. The quality of "KELLY'S FAMOUS FLOUR" is standardized,—not "price-ized."

We have followed this same policy for forty years.

ARNOLD OF STERLING

THORO-BREAD

The Perfect Flour

(Diastatically Balanced)

A baker customer wrote us:

"We are anticipating extra fine results from this flour. We don't know who writes your advertisements but they are certainly effective. Our congratulations."

For which, our best thanks.

The only kind of advertisements we know about are those which straightforwardly tell the merits of the things advertised—

Backed up by products which make the "anticipated extra fine results" certain.

That is all we try to do in promoting the sale of "Thoro-Bread Flour."

Just tell about its fine baking quality—

And then put that fine baking quality into the flour when we mill it.

Our "congratulations" to you, friendly baker customer.

PERTINENT FACTS ABOUT THE

The following brief and easily understood presentation of the salient features of the New Federal Food, Drug and Cosmetic Act are reprinted from a booklet published by the Laucks Laboratories, Inc., analytical and consulting chemists of Seattle, Wash. The information listed is interpretive of the act, but is not to be construed as official.

The effective date of the provisions relating to labeling requirements has been extended to Jan. 1, 1940. However, regulations against adulterated products and deceptive fill of containers are being enforced immediately.

Nomenclature:

a room is: an article used for food or drink for man or other animals; chewing gum; or an article used for components of such articles.

AN ARTIFICIAL COLORING IS: a coloring containing any synthetic dye or pigment, or a coloring manufactured by extracting a natural dye or natural pigment from a plant or other material in which such dye or pigment was naturally produced.

an artificial flavoring is: a flavoring containing any sapid or aromatic constituent, produced synthetically.

A CHEMICAL PRESERVATIVE IS: any chemical which tends to prevent or retard deterioration of food, not including common salt, sugars, vinegars, spices or oils extracted from spices, or substances added by direct exposure of food to wood smoke.

AN OPEN CONTAINER IS: a rigid or semi-rigid construction not closed by lid, wrapper or otherwise.

AN OPTIONAL INGREDIENT IS: one which is allowed but not required in a product officially designated as standard.

Adulteration:

A FOOD IS DEEMED TO BE ADULTERATED IF:

it contains any poisonous or deleterious substance;

it contains any filthy, putrid or de-

it has been prepared, packed or held under insanitary conditions which would render it injurious to health;

would render it injurious to health; it is in whole or in part the product of a diseased animal or of an animal which has died otherwise than by

slaughter; its container is composed in whole or in part of any poisonous or deleteri-

ous substance which may render its contents injurious to health; any valuable constituent has been in

whole or in part omitted or abstracted therefrom;

any substance has been substituted wholly or in part for a valuable constituent omitted;

damage or inferiority has been concealed in any manner;

bulk or weight of product is increased by addition or inclusion of a substance reducing the quality or strength of the product and making such product appear better or of greater value than it is: it bears or contains a conl-tar color other than one from a batch that has been certified under regulations promulgated by the Secretary of Agriculture;

it is a confectionery and it bears or contains any alcohol or non-nutritive article or substance except harmless coloring, harmless flavoring, harmless resinous glaze not in excess of .4%, natural gum, and pectin.

CERTAIN EXEMPTIONS

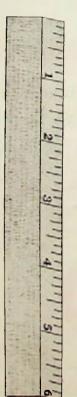

product is a citrus fruit bearing or containing a coal-tar color, if application for listing of such color has been made under the act and not acted on by the secretary, and if such as was commonly used prior to the ensetment of this act for the purpose of coloring citrus fruit;

it is an alcohol-containing confectionery bearing less than .5% by volume of alcohol derived solely from the use of flavoring extracts, or a chewing

Bakers Adopt Formula "D" because of its "CRIPPLE-PROOF" Quality

For the first time a rich layer can stand rough handling!

Formula "D"—The New Quik-Blend
Basic Yellow Layer Mix Made With
Quik-Blend 51, Combines The Six
Qualities All Bakers Need

No cripples — A rich, delicious cake that can stand rough handling in production without breaks or splits.

A low INCH-COST using top-grade ingredients.

A basic mix that can be varied for individuality or local conditions.

Faster production—Less mixing time and a sure-fire method.

Uniform layers with smooth, even grain—a minimum of icing and a minimum of icing labor.

Longer freshness — Greater moisture content.

BY telephone, letter and personal request, bakers throughout the country have been calling for the new Quik-Blend basic yellow layer mix since it was announced last month. And with good reason - the most important feature of this new basic Formula "D" is its guarantee of a rich, tender cake which will not break or split in production under average shop conditions. Whether you make 1 or 1000 layers a day, Quik-Blend Formula "D" is so constructed that you can practically eliminate all cripple losses. So, Shortening Headquarters again urges bakers who've not yet tried it to give Formula "D" a test in their own shop - in their own interest!

But the "cripple-proof" quality of this basic formula is only one of its many advantages. Consider, in addition, these other desirable factors—

Low Inch-Cost*

Using only top-grade ingredients, this formula delivers so many more INCHES of finished cake, that it is actually cheaper than many formulas costing one to two cents less per pound of batter! Remember, it's not the batter cost per pound that determines the cake cost—it's the number of finished cake INCHES a batch produces that gives the true cost figure. That's why Shortening Headquar-

*INCH-COST based on average market-quotations on ingredients, as of October 10th.

FEDERAL FOOD AND DRUG ACT

gum containing harmless non-nutritive masticatory substances.

Misbranding:

A FOOD IS DEEMED TO BE MISBRANDED DE

its labeling is false or misleading in any particular;

it is offered for sale under the name of another food:

it is an imitation, unless its label bears in type of uniform size and prominence the word "imitation" and immediately thereafter, the name of the food imitated;

its container is so made, formed or filled as to be misleading:

it is in package form and does not hear a label containing: (1) name and place of business of the manu-facturer, packer or distributor; (2) an statement of the quantity of the contents in terms of weight, measure or numerical count:

required information on label or labeling does not have prominence and conspicuousness rendering it readable by ordinary individual under customary conditions of purchase;

purports to be a food as defined under regulations promulgated by the Secretary of Agriculture, and does not conform to such definition and standand on its label does not hear the name of the food specified in the definition and in so far as is required by regulations, the common names of ontional ingredients (other than spices, flavoring and coloring) present in

it is subject to official definition and falls below the standard set for such food, and its label does not so state; it is subject to official standards of container fill and falls below the standard applicable thereto, and its label does not so state:

it is not a food defined under regulations promulgated by the Secretary of Agriculture, and does not hear the common or usual name of the food; or if it is fabricated from two or more ingredients and it does not bear the common or usual name of each such ingredient, except that spices, flavorings, and colorings, other than those sold as such, may be designated as spices, flavorings, and colorings with out naming each;

it purports to be for special dietary uses, and its label does not hear such information concerning the vitamin, mineral, and other dietary properties officially deemed necessary to fully inform purchasers as to its value for such uses:

it bears or contains any artificial flavoring, artificail coloring, or chemical preservatives, unless it hears labeling stating such fact.

CERTAIN EXEMPTIONS

any variations in statements on labels of quantity of contents are within reasonable limits prescribed by the Secretary of Agriculture;

any omissions on labels of small packages come within exemptions allowed by Secretary of Agriculture:

inclusion of common name of two or more ingredients of a product is impracticable, or is conducive to deception or unfair competition. Exemptions shall be established by regulations promulgated by Secretary of Agriculture;

inclusion of statement of artificial flavoring, artificial coloring or chemical preservatives, is impracticable; exemptions shall be established by regulations promulgated by Secretary of Agriculture; butter, cheese, and ice cream do not come under the requirements relating to labeling of artificial coloring, since specific federal regulations under other laws apply to them.

Labeling:

A LABRE IS: a display of written, printed, or graphic matter upon the immediate container (not including package liners) of any article, and on the outside container, if any, of the retail puckage of such article if the matter on the immediate container is not plainly visible through such outside covering.

LABELING IS: all labels and other writ-

ters has been saving - forget your old ideas about figuring ingredient costs alone. To get your true cost, figure cake costs by the INCH

Formula "D" Can Be Varied To Fit a Baker's Individuality or His Local Conditions

So scientifically balanced is the new Quik-Blend Formula "D"-not too high in moisture or sugar - nor too lowthat many different kinds of cakes can be made by such additions as nuts, cocoa, honey, etc., without materially affecting the INCH-COST or delicious cating qualities.

Quik-Blend 51 Production Savings

Quik-Blend batters save 3313% mixing time . . . by a method that fits any type of shop.

Quik-Blend layers are smooth and uniform, making for a minimum of icing and a minimum of icing labor.

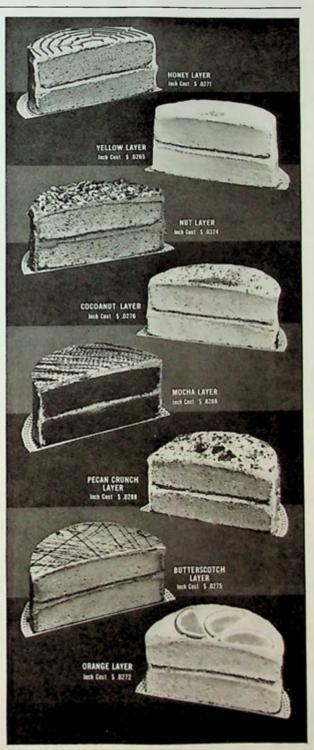

Quik-Blend cakes are first-quality cakes - customer-pullers. What's more-they stay fresh and moist, good to cat after fire days!

Thus, with Quik-Blend Formula "D". you can produce a variety of deliciouseating, top-quality layers on an economical basis. All of the cakes pictured at the right were made through variations of this basic mix. A baker's own ingenuity with flavors and icings will make possible many other variations which are completely individual and different from those of competitors. From every angle -- INCH-COST -- "cripple-proof" quality - variety - time - texture freshness - Formula "D" provides the six qualities every baker needs in a basic layer mix. Test this new Quik-Blend Formula with Quik-Blend 51 and get your own proof. Ask the Shortening Headquarters man for further information or write to our nearest office for formula details.

ten, printed, or graphic matter (1) upon any article or any of its containers or wrappers, or (2) accompanying such articles.

GENERAL INFORMATION ON LABELING:

All labeling must be in the English If, in addition, labeling contains any information in a foreign language, all information required by act must also be in that language. Statement of quantity of contents must reveal quantity in package ex clusive of wrappers and other material packed with product.

Statements of weight, measure, count. or combination of such, shall be expressed in terms of general consumer usage, except in cases where there is no general consumer usage, when statement shall be in terms of liquid measure, if product is liquid; weight, if product is solid, semi-solid or viscous. In export, the statement of weight or measure may be in terms of a system commonly used in the country to which product is shipped Statement of weight or measure of a food or a cosmetic may be supplemented by a statement in terms of the metric system.

If an unqualified statement of numerical count does not give accurate information as to quantity of product in package, it must be accompanied by statement of weight, measure, or size of individual units in such pack-

Statements shall contain only generally used fractions; a common fraction shall be reduced to its lowest terms; in case of a food or cosmetic, a decunal fraction shall not be carried out to more than two places; in case of a drug, a decimal fraction shall not be carried out to more than three places, except in an instance of statement of the quantity of an active ingredient in a unit of the drug

If quantity of product in package equals or exceeds the smallest unit of weight or measure set forth by the act as applicable to such product, statement of contents shall the number of largest of such units in the package: i.e., statement must be "I quart" not "2 pints" or "32 fluid ounces"; except with reference to the metric system supplementary statements. A fraction with a whole numher: i.e., "1% quarts" may be expressed in its largest units commonly used: i "I quart, 11/2 pints," but shall not be expressed in terms of its smallest units: i.e., "I quart, 16 fluid ounces."

In cases of quantity of contents of a product customarily stated as a fraction of a unit, which unit may be larger than the quantity in the package, or as units smaller than the largest unit contained therein, statement may be made in accordance with such custom, if it is informative to consumer.

Certain exemptions from labeling requirements are allowed by regulation of the Secretary of Agriculture on:

a. Small open containers of fresh fruits and fresh vegetables;

h. Food which in accordance with the practice of the trade is to be processed, labeled or repacked in substantial quantities at establishments other than those where originally processed or packed.

LABELING FOR A FOOD MUST CONTAIN:

Name of product.

Name and place of business of the manufacturer, packer or distributor Statement of content by weight, measure, or numerical count, or a combination of these, in accordance with official specifications.

If the product consists of two or more ingredients, each ingredient must be designated by its common name, unless otherwise officially designated.

Spices, flavorings and colorings which are inherent modifying ingredients and not commonly sold as spices, flavorings and colorings, may be stated as such without the use of their specific names. An ingredient which is both a spice and a coloring or both a flavoring and a coloring, shall be so designated, unless a specific name is

Declaration of artificial flavoring, artificial coloring or chemical preservative with adequate conspicuousness on label, or on food if not in package form. Certain exemptions permitted by regulation of Secretary of Agriculture for small packages with inadequate space for including such matter.

Treasurer's Authority

A haking corporation was exonerated from liability on an alleged contract to buy real estate for want of proof that its treasurer, whose acts were claimed to be binding upon the company, was empowered by the corporation to make the contract. (Levy vs. Parkway Baking Co., 200 Atl. 584.)

"THE RETAILER RESEARCHES"

EDITOR'S NOTE: This paper by Walter Jesse, Jesse Bakery and president of the Associated Retail Bakers of America, Kansas City, Mo., was presented at the annual convention of the American Bakers Association, held in New York, Oct. 15-19.

TTS a pleasure to be here, especially as it gives me the opportunity to renew many of the acquaintanceships made when the bakers of my home city were the hosts to the A.B.A. convention two years ago. We enjoyed that opportunity and from the remarks of many I have met since arriving in New York City, I am sure everyone who attended it enjoyed their visit as much as we did having them with us.

And now to the subject assigned to me—The Retailer Researches"—and I might say it is one that has been the first and foremost in the thoughts and plans of the officers and directors of the Associated Retail Bakers of America for the past five years.

Although our organization has more than 20 years of history back of it, and has accomplished quite a bit during this span of time, still our efforts were not recognized with the same interest and attention that we are receiving since we started "researching." That dates back four years specifically, as far as the industry is concerned, because it was on Sept. 9, 1935, that we created what we chose to call our research and merchandising department. We have a display in the ballroom foyer which tells the story of its progress better than I can portray in words.

This department was established with some definite ideas in mind. To find ways in connection with retail production and merchandising that would help to carry our branch of the industry along in the job we all have—the job of making the consuming public realize that we as bakers are better equipped to handle baking for them than the housewife is able to do it in the kitchen. We needed ammunition to do this and during the past four years our research and merchandising department has furnished this. Under the able direction of Frank Jungewaelter, a retail bakery operator, a seasoned official and a man adept at the art of finding out why things should be done in a different way, we have made good strides.

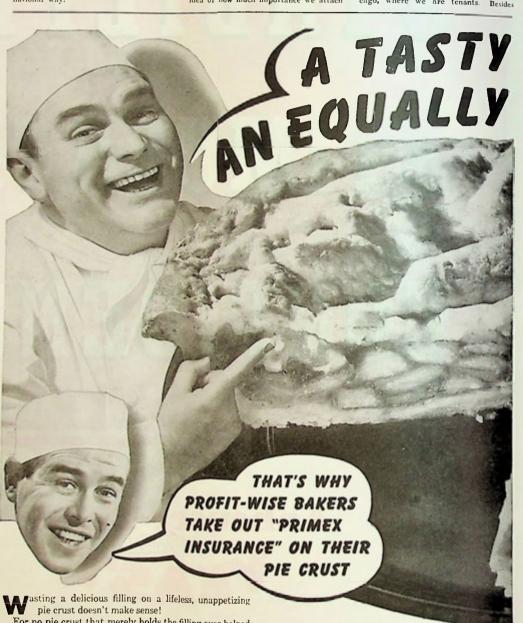

We had some things to find out. There was equipment to study and developments in connection with its application to the needs of our branch of the industry that had been overlooked even by the manufacturers of the equipment. Since the establishment of our research and merchandising department we have found out much about the use of the mechanical refrigerator for retarding and refrigerating doughs. That was Production Job No. 1 for our department, and through bulletins and the conduct of a number of short courses the retail bakers of the country have been informed how vitally important this development is to the future progress of the retail bakers and secured information never before avail-

Merchandising Job No. 1 was the successful inauguration of National Retail Bakers Week in 1938. Repeated again this year it was another success—so much so that our plans include its repetition in 1910. Through this undertaking we have been able to make the retail bakers of the country conscious of the merchandising possibilities they have and made them realize the advantages of acquainting the public with baked foods in a national way.

Time does not permit a detailed explanation of all of the activities of our research and merchandising department, such as conversion of home type formulas, formula costs, whipped cream research, our part in the joint committee on food protection. I hope, however, that my remarks will at least give you all a good idea of how much importance we attach

to "researching," and how we like the members of your association, feel—that a lot of credit is due this researching for our progress.

While on this subject of credit I meet give some of it where it is due. Our department is located in the building of the American Institute of Buking in CEIcago, where we are tenants. Besides.

For no pie crust that merely holds the filling ever helped boost a baker's pie sales. Not for a minute! Pie crust is meant to be caten—enjoyed! It's the combination of tender, flaky crust and luscious filling that makes a pie really good.

For bigger pie sales take out "Primex insurance"

Many a baker has seen his pie sales climb surprisingly after changing to Primex. And that's not hard to explain. Using this pure, digestible, all-hydrogenated shortening is like taking out insurance on pie crust quality. For Primex helps produce tender, flaky crust that brings customers back for more.

You'll like its easy working qualities

You'll like the way Primex behaves in the dough. You'll like its smooth working qualities... the easy way it blends with the flour... the uniformly excellent crust it helps to produce because of its uniformly high quality.

And Primex is made to resist rancidity and the development of off-flavors at high baking temperatures. That's one

An address at the national convention of the AMERICAN BAKERS ASSOCIATION

having space in this well-known building for our headquarters, our researching has benefited by the assistance we have received from William Walmsley and his staff and our sincere thanks are extended for this help.

Throughout the year there are many times when the problems of our branch of the industry are similar to the prob-

lems of yours. When this happens we do not hesitate to call on your officers and staff members, and it is with grateful appreciation that I acknowledge the fine co-operation received from President 1.

J. Schumaker and Secretary Tom Smith and General Counsel William A. Quinlan, and in order that we could continue our researching we recently prevailed

upon the trustees of the American Institute of Baking to give us larger quarters where our research bakery and offices could be located adjacent to one another. If you have seen the recent trade paper announcement you know our wishes were granted—thanks to the trustees—and we now have a neat and very efficient arrangement. Therefore, researching for the retailer will go on and as it helps our progress we hope—quoting from the creed of the American Society of Bakery Engineers—"that it creates in the public esteem a greater appreciation of the ancient and honorable profession of baking."

Air Pressure Studied in Baking Tests

E. PYKE, of the Colorado State College Experiment Station, is rendering aid to the baking industry. He spends many of his working hours in a chamber like those used to prevent deep-sea divers from suffering the "bends." In this chamber cakes and other pastries are baked under atmospheric pressure conditions which vary from sea level to 12,000 feet allitude—it's the only one used for this purpose that Mr. Pyke knows of in the entire world.

By changing the proportions of egg, milk and sugar in a cake, Pyke and the college staff have evolved formulas which produce delicious pastries at various altitudes.

Air pressure in the chamber is changed at will through use of a compressor, and an air conditioner maintains ordinary temperature and humidity. Inside the chamber it is possible to "climb" from air pressure conditions at sea level to those at 12,000 feet above sea level more quickly than the pilot of the fastest airplane. In experiments, baking has been done at the extreme of air pressure from 1,000 feet below sea level to 18,000 feet altitude.

Pyke explained the reasons for varying cake recipes at different altitudes as follows:

"The Internal temperature attained in a cake batter during baking never exceeds, except slightly, the boiling point of water at the prevailing atmospheric pressure. Since water boils at different temperatures as the atmospheric pressure varies with the altitude, it is apparent that the temperature at which the ingredients of the cake are cooked varies with the altitude.

"For instance, at sea level, where the temperature within a baking cake attains 212° F, the egg in the cake suon becomes hard and leathery. At 10,000 feet above sea level the cake seldom gets hotter than 194° and the egg content remains much more tender after cooking.

"Until recently 'sea-level' recipes were corrected for high-altitude haking only by reducing the amount of sugar and leavening agent used. This method results in a cake which looks good but which at very high altitudes ceases to be sweet enough to deserve the name of cake. In some instances thick frostings were recommended to make up for the lack of sugar in the cake proper.

"The purpose of experiments in pressure chamber, or altitude laboratory, is to balance the recipe so that the resulting pastry will have proper texture and still be sweet and nutritious. This objective has been accomplished in many formulas and future experiments will bring about satisfactory high-altitude recipes for all types of cakes."

THE NEW CHAMPION IN THE SHORTENING FIELD heavy-duty MFB

New champion by right of performance - with a champion's lasting power when the going gets tough - and a champion's ability to "take it" under all conditions. That's heavy-duty MFB!

Think what this means right now for the big doughnut season — when you need a frying medium that will have to withstand continuous high temperatures. Heavy-duty MFB is made to order for that tough and important job!

The doughnut season begins in October but it runs through April! 7 months! 7 big doughnut months!

So, now is the time to fill your kettle with heavy-duty MFB and you are fixed for the whole season. Simply freshen up the kettle with the amount absorbed, and use normal care to keep heavy-duty MFB clean. No waste - and guaranteed performance. And the many shops already using heavy-duty MFB offer proof of results.

Test heavy-duty MFB. Get to know this dependable economical shortening. And see just what it means to back a champion - at no extra cost!

Nicholas Semotiuk, owner of the Home Bakery in Minneapolis, 351 Thirteenth Avenue N.E., is building a \$5,000 addition to his store building.

At a recent meeting of the Minneapolis

WHAT PART CAN A WRAPPER PLAY IN SALES?

Your wrap has a bearing on sales, of course — but if too many bakers try to rely on the same type of package to sell their cake, none really achieves distinction and sales are largely controlled by quality and value instead.

It's like a fellow who wears a high hat to attract attention — while if everybody wore one, a neat fedora would really stand out.

By all means keep your package good, but don't

splurge on wrapping costs, and hope the wrap alone will sell the cake. A change to Riegelite may save enough to help you boost sales in many ways - and you'll still have a package with good transparency and a maximum of moisture-protection. Check the list of "salesbuilders" at the right, and consider how the money Riegelite might save could spread your sales building efforts over a broader front for greater sales and better profits.

In markets everywhere...

WITH DEXTROSE RANK HIGH AMONG BEST SELLERS

denied—that bakers of hundreds of the finest loaves on the market have "swung over" to dextrose as the ideal sugar for bread and other yeast doughs.

These bakers in many cases have far too large a business to take chances. Their choice of materials rests on thorough tests and constant checking to maintain a uniformly high quality

standard. They have standardized on Dextrose only after they were more than satisfied on every point of flavor, color, volume and texture.

Dextrose is available to bakers under the trade name, CERELOSE. Try this directly fermentable sugar in your regular formula. You'll like the results as have so many of the country's leading bread bakers.

Not sweetness...but fermentation energy

A good point to remember in selecting sugar for bread doughs is that sweetness as such is relatively unimportant, since most of the sugar is consumed by the action of the yeast. What counts is the ENERGY produced by the sugar in fermentation—so vitally essential to good baking results. Dextrose, ideal source of energy in the human diet, is also the ideal source of fermentation energy. Use it in all yeast dough formulas.

CERELOSE PURE DEXTROSE SUGAR

CORN PRODUCTS SALES COMPANY, 17 Battery Pl., New York, N. Y.

SURPLUS FOODS AND THE FOOD

By virtue of the authority vested in the Secretary of Agriculture by law, Henry A. Wallace, secretary of the United States Department of Agriculture, has transferred funds to be used to purchase certain surplus agricultural commodities and donate them to the several states, cities and relief agencies to distribute for relief purposes. This department of the government has been attempting since 1933, first through the Federal Surplus Relief Corp. and now through the Federal Surplus Commodities Corp., to bring surplus agricultural products to needy consumers.

During the last 5½ years the government has purchased 2,500,000 tons of potatoes, wheat, apples and other foods and gave them, through relief agencies, to families victimized by the depression.

There are billions of pounds of farm supplies produced for consumption, but are not getting into the hands of millions of consumers who are on short rations. This year, with the surplus farm products mounting higher than ever, the need for opening up the way to get these products to the consumer has become an acute problem.

MOVING SURPLUS FOODS

Along about March of this year, the Secretary of Agriculture proposed that a new method be developed for coping with this great problem. The secretary called upon the Federal Surplus Commodities Corp. to evolve a system which would use the normal channels of wholesale and retail trade to move more food to needy city consumers. To that end, the food order stamp plan came into existence and it is now in operation in the cities of Rochester, N. Y., Dayton, Ohio, Scattle, Wash., Des Moines, Iowa, Shawnce, Okla., and Pottawatomie County; Springfield, Ill. The program will probably be extended very soon on a nation-wide basis.

The proposed plan aims directly at increasing the domestic consumption of surplus food commodities. Issuance of the food order stamps will create purchasing power for commodities which are surplus now, not because the need for them does not exist, but because the persons who need them most cannot buy them, and through the normal channels of retail trade, the surplus foods will be made available to the needy and undernourished persons, where otherwise these farm products would be permitted to go to waste.

HOW FAMILIES RECEIVE STAMPS

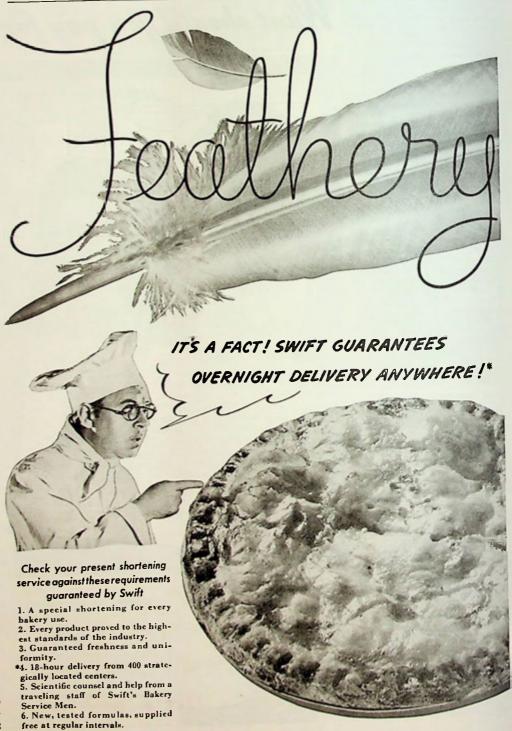

The family certified for public aid will be offered the chance to buy orange colored stamps. Any person certified by a duly authorized agency as eligible for public assistance may purchase or obtain in lieu of money payment, orange food order stamps, which are in denominations of 25c each. These persons can buy books containing enough orange stamps to equal \$1 for each member of their family, and for every dollar's worth of orange stamps purchased the recipients will receive 50c worth of blue surplus food stamps free. Families eligible to participate in this food stamp plan include WPA workers, mothers receiving

pension, folks receiving old age pensions, unemployed who are getting public aid—and there is a possibility that it will not only include the relief groups but the families with low incomes as well. The Secretary of Agriculture believes that there will be more people on the low income basis brought into the plan because of the increased prices of food since the outbreak of the war. Another group of

certified eligible families, unable to buy orange stamps, will receive the blue surplus food stamps free. The blue surplus food stamp is also in 25c denominations.

ITEMS OBTAINABLE WITH STAMPS

Purchases can be made with the orange stamps for any food or household supplies sold in a food store, but not tobacco, beer, wine or liquor; nor will these stamps pay for foods eaten on the premises. The blue surplus food stamps will be good for purchases of foods listed as surplus foods. The Secretary of Agriculture can designate the foods to be listed as surplus foods and at the present time the FSCC is distributing such surplus foods as dried beans, oranges, grape fruit, butter, dried prunes, corn meal,

STAMP PLAN

By J. NEWTON DAVIES

shell eggs, wheat flour and whole wheat like dollars spent, start goods moving

STAMPS USED AS MONEY

The chief argument for the new food order stamp plan is that it works just the way any other purchase works. The recipient takes the stamps to the retall food store (bakeries included) and spends them like money. Stamps spent,

through the arteries of business.

The stamps will be taken by the families to the food stores where they ordinarily shop or to any other store joining in the food stamp plan. Purchases will be made at the prices that prevail in the

Retail bakers can redeem the orange

colored stamp for any bakery product. In those bakery stores where they have refrigerators or refrigerated counter cases, the baker can merchandise surplus foods, such as fresh eggs and butter, for which he can redeem the blue surplus food stamp.

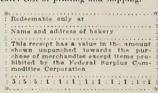

As the families do their shopping, they will tear stamps out of their book in the presence of the retailer, and stamps cannot be accepted otherwise. The stamps are not to be sold or exchanged-they must be used by the family to whom they have been issued. To buy new books of stamps, families will have to turn in covers of their used books.

Purchases made in amounts less than the value of one stamp are permissible under the following conditions:

FSCC Regulations-Section 201-"CHANGE: No retail food store merchant, and no manager, clerk, assistant or other person acting for him, shall give change in currency or otherwise in connection with food delivered for food order stamps; provided, however, that if such merchant or person so desires, he may extend credit for future delivery of food or surplus foods, as the case may be, for the balance of the face value of the orange colored or blue colored surplus food order stamp, if food delivered is of a value less than either a single stamp or a multiple thereof."

Giving this section of the regulations considerable study, the Associated Retail Bakers of America has prepared a coupon in colors of orange and blue. The orange coupon will be given as a credit for the orange stamp and the blue coupon will be given as a credit for the blue surplus food stamp. This credit coupon will be issued by the merchant who redeems the stamps and all subsequent purchases for the amount shown unpunched on the card of 24c or less must be made in the retail establishment where the coupon was originally issued.

These eards can be obtained from the Associated Retail Bakers of America, either with your name printed on the eard or the space for your name and address left in blank in order that the retail baker may stamp his name and address with a rubber stamp. There will be a nominal charge for these cards to cover cost of printing and shipping.

Card for Bine Stamps

FULL MONEY VALUE

Once the retail haker or other merchant takes the stamps in exchange for his products or for items of the surplus food list, he will receive his money for the stamps when he will paste the stamps on a card (the card used for this purpose is furnished by the FSCC and comes in orange and blue colors, each for their respective color of stamp) and then turn this eard in to his hank, or a United States post office, or to his wholesaler,

EXTRA TENDER PIE CRUSTS COME EASY WITH SWIFT'S "SILVERLEAF"...THEY'RE RICHER, MORE FLAVORFUL, TOO ...

• Actual shortometer tests prove that Swift's "Silverleaf" brand Lard makes pic crusts from 15 to 30 per cent more tender than bland vegetable shortenings. And you know what a reputation for tender, flaky pie crusts can do for a baker's sales!

That's one reason why so many bakers are using "Silverleaf" today. Another, is the way the pleasing, nutty flavor of "Silverleaf" carries through as that of bland shortenings cannot do. Its texture, too, makes it particularly fine for pies. It forms "long strands" when worked into the flour, is never brittle or lumpy at icebox temperature. It is extremely plastic.

But let "Silverleaf" speak for itself! Try it once, and it'll be a steady in your bakeshop. Call your Swift salesman or the nearest Swift branch house today.

SWIFT RECOMMENDS -

"SILVERLEAF" BRAND PURE LARD-for pies and breads. Tests prove that it makes pie crusts and pastries far more tender. FREAM-specially effective for general bakeshop use. Bland . . . use it for cakes, baking, frying and cooking.

VREAMAY-for richer, moister

cakes. High butter and moisture tolerance.

SWIFT'S BAKERS PASTRYfor puff paste goods. Specially blended for light, flaky things. MELLOCRUST-for pan greasing. For flavor; and to prevent gumming, sticking, tearing. FROZEN EGGS

THE NORTHWESTERN MILLER AND AMERICAN BAKER

who will act as agent for the retailer in getting his money from the federal treasury. The orange stamp will already have heen paid for by the recipients, so their redemption will cost the government nothing. Since the blue surplus food stamp will be given away, the government will have to pay eash out of the pocket to redeem them.

HELP OF BUSINESS NEEDED

The aggressive help of husiness is needed to increase the domestic consumption of surplus agricultural commodities and it is assumed that there will be fair play in this plan. Penalties, nevertheless, are provided for the failure to play square. There may be a few chiselers and these few will be subject to the fines and punishment as provided in the United States Criminal Code, and shall be denied the right to further participation in any manner or respect concerning the food order stamp plan.

Bakeries and bakery stores, having fixed retail establishments, which are engaged in retail business, may participate in the food order stamp plan with respect to the across-counter sales in their stores, They may also participate in the program with respect to house-to-house business provided such business is not solicited. Every retail baker or bakery should know the persons in his locality who are receiving public aid and advise them that he redeems the food order stamps in his place of business. It will be wise to place a small neat sign in the display window or on the counter to the effect that the bakery will redeem the stamps. The retail baker should learn all he can about this program and should discuss its possibilities with his sales people.

SUMMARY

- (1) The purpose of the government's food order stamp plan is to encourage wider consumption of surplus food products by increasing the purchasing power of low income families. The government has been assured that the plan can be most effectively carried out by the retailers and other distributors of food products in the course of their regular business. The success of the plan, therefore, will largely depend upon the retailer's co-operation with the government in demonstrating the efficiency of this method of food distribution to the public.
- (2) The term "the retail food store" means a merchandising establishment where a food retailer carries on the business of selling food, grocery or bakery products to the consumer, not for the purpose of resale in any form and not consumed in the usual course of business on the premises.
- (3) Identification: Be sure that the person presenting stamps for food is the person or a representative of the person whose name appears on the front cover of the stamp book. If necessary, the person should be required to identify himself
- (4) Removing stamps from books: All stamps must be taken from the stamp book in the presence of the retailer or in the presence of one of his employees only at the time delivery of the "food" or "surplus food" is made.
- (5) Orange stamps: Orange stamps have a value of 25c each and may be taken in by the retailer in exchange for all foods for human consumption, and for household articles which are usually sold in his store. Orange stamps may not be used for products which are in the usual

course of husiness consumed on the premises and may not be used for tobacco. beer, wine, liquor or other alcoholic heverages

(6) Blue stamps: Blue stamps have a value of 25c each and may be taken in by the retailer only in exchange for foods listed as "surplus foods" in bulletins which will be sent to you for posting in your store.

(7) Making change: Do not give money in change for stamps. You may, how-ever, give back to the consumer the credit card for the food or surplus food which is exchangeable for the partly used stamp.

(8) Do not accept stamps for the payment of bills previously incurred. Stamps should be accepted by the retailer only in exchange for food delivered to the consumer after receipt of the stamp.

(9) Violation of regulations: If occasion arises, inform persons that you cannot deviate from the regulations, as it would subject you to the fines and imprisonment provided by the U. S. Crim-

(10) Both the orange stamp and the blue surplus food stamps are the same as money and can be deposited in the bank as such

MENU CONTEST

THE Sheboygan (Wis.) Baking Co. created profitable interest through an international menu contest. Many new customers were achieved. The requirements of the contest were very simple. Women were requested to send in some menu of a national dinner, German, Italian, Danish, or even New England, including some item which could be purchased from the Sheboygan Baking Co. The winner each week got \$1 worth of free bakery goods and the winning recipe was published.

Breddo is a scientifically cultivated, de. When a large percentage of breads in your present bakery your customers want real old-

vated, dehydrated real rye (ferment). It is the heart of true rye breads, it improves the gluten, giving more volume, clastic crumb, softer, moisture and a tangy taste that is so essential in rye breads, pumpernickel, whole wheat, cracked wheat and other specialty

Ryddo centrated, pure tye extract in

is a highly conpowder form. It

gives that true flavor, taste and natural color so essential in good rye breads. No caraway or artificial flavors used. One pound of Ryddo is equal in flavor to five pounds of rye flour, which enables you to use more clear flour and still get full rye flavor and more volume.

fashioned rve and pumpernickel bread, why not be the wise baker to offer these much desired loaves. If you are under the impression that these types of bread cannot be produced in the modern plant, let us show you that real rye bread is just as easy to produce as white bread and does not require a specialist. Let us prove that with Breddo and Ryddo you can make rye ment, and at the same time develop very profitable and fast selling items.

Do not hesitate to get in touch with our service department, which is composed of practical bakers who can help you build a rye bread business on a permanent basis. They will give you new ideas that will increase your volume and reduce your overhead in a short time.

"PROGRESS THROUGH RESEARCH"

E are told that when mankind was created, the Creator said, "Replenish the earth and subdue it. Take dominion over the sea, the air, over all the earth and every

The human race has been very slow in following these instructions, and throughout the centuries man's efforts to con quer Nature have been upset and offset by man's effort to conquer his fellow-

Early supremacy in the human family as established by physical prowess. Our first rulers were those physically mightier than their fellow-men. Then came prog-ress through use of materials-wood, stone and metal. Kingdoms were established and governments formed by leaders who developed weapons for human

them. These rulers rose to positions of power, but their kingdoms did not last. It has always been true and always will be true that "those who live by the sword shall die by the sword." Nevertheless history still glorifies leaders like Alexander and Caesar, though little remains of the glories they sought to create.

The United States of America is a

It arose from a war for liberty and when the time came to form a government, there were fortunately students of history among our leaders who said, "Before we determine what form of government these colonies shall have, let us delve into history and try to avoid the mistakes and failures of previous forms of government. Let us study acts which have been tried by others, and seek to avoid governmental principles which have failed in the past." As a result, the Constitution of the United States was written and accepted as the basis of our form of government.

Ours is the only governmental authority in the world developed through research. In that day, as in this, there were men who had their own theories and their own ideas about what might or could be done. But the men who signed the Constitution of the United States east aside their theories, their personal prejudice, yes, even their own feelings, to give this country a form of government based on a study of human experience throughout the ages.

This is not the place to discuss the policies our country has followed during the past several years in local, state and notional affairs. Without research and without study we have committed the same mistakes and pursued the same foolish theories that are written in history as pitiful failures. We have just bluedered along.

But through the clouds the sun is shin ing, the sun of research. It is probable that more research is being conducted in this country today than in all other countries in the world combined. We are told there are 16,000 research laboratories in the United States today, compared with 8,000 10 years ago, and we are just beginning. There came to my desk the other day a sales letter from a textile company in Rhode Island, which said, "Research is not confined to the laboratory. Salesmen today are pushing the laboratory men hard in their search for new ideas."

Research implies searching again and again; its motto is, "If at first you don't succeed, try, try again." In fact there are products used today that are named from the number of attempts made to find the right combination before success appeared. And sometimes the result comes when and where least expected.

Do you recall the old farm story of the lost calf? When the cows were brought from pasture in the evening a calf was missing. As the farmer and his son began their search, the father said, "Now look in all the unlikely places as well as the likely places." They separated and began to bunt. The father was unsuccessful, and on returning to the barn be saw his son climbing down a ladder from the hay mow. The father said, "What are you doing up in the hay mow?" The reply was, "You told me to hunt in the unlikely places and this was the most unlikely one I could think of."

Accomplishment through research is generally measured by its objective use. This, however, may be of far less immediate importance than its resulting cultivation of habits of accuracy, eareful judgment and intelligent appraisal of facts and the development of a purpose

* THE KEEN TASTERS WANT WYTASE BREADS

Half of all the consumers in your market have a keener sense of taste than other people and detect slight differences in food flavors. They are the people who choose the WYTASE breads from among all other breads in that market as having better, "more satisfying" taste.

In one large market in Ohio these Keen Tasters picked WYTASE-made breads over other leading loaves with. out WYTASE, by margins of 18 to 27%. But other consumers too, with tastes not so keen, also showed a majority preference for breads made by the WYTASE

When a majority of 1079° consumers in one market pick WYTASE breads for flavor, that should be sufficient proof of their buying preference!

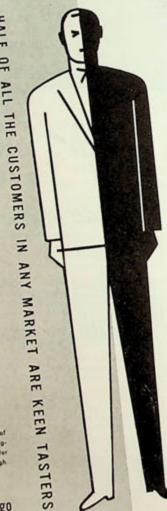

The same sort of results are obtained by scientific, unbiased taste tests with WYTASE breads in other markets over the country. If you would prove it to your own satisfaction, write for complete information.

to base decisions and plans on knowledge rather than on impressions and feelings. Research teaches us that the things we want to do or feel like doing should be judged by facts, not feelings.

Vice President Kettering, who has charge of research for General Motors, has frequently said that "Research is a state of mind." He is the man who invented the self-starter, thus promptly advancing women from the back seat to the front seat of the modern automobile. He is the man who said to the workman who claimed a certain piece of steel could not be drilled because it was too hard, "Have you tried a diamond pointed drill?" The workman had not. When he got one, he found the diamond-pointed drill was harder than the steel. Mr. Kettering's only rebuke was, "You see, the steel wasn't too hard but your drill was too soft."

Yes, research is a state of mind.

As you see children around you today, in your own family or in the families of others, does it ever occur to you that at one time you talked and acted just as these children do?

Or do you regard yourself as a grownup and forget all about childhood days? If so, then you do not have a mind intended for or capable of successful research.

If, after accommodating ourselves to conditions and surroundings, and reaching the stage which we call "grown up," we forget that we knew nothing when we came into the world and that we had a lot to learn before we could walk or talk, and a lot more to learn before we could feed and clothe ourselves, and that our progress was possible only through experience; if we forget the struggles we had in "growing up" and feel that we are now entitled to settle down and that the "world owes us a living"—then we have grown too old for research.

A child constantly asks questions; that is the only way it can learn. When you meet a man or woman who ask you a lot of questions, instead of telling you a lot of things, you have met someone who will never grow old—someone who is continually progressing in one kind of accomplishment or another.

Progress of the human race is measured not by power nor by might but by the state of mind of the people. The comforts and conveniences which you enjoy at home did not spring from the flaming mouth of a cannon, the scepter of a king or reform polities; neither did the appointments of this hotel; they have been made possible through the contributions of millions of peace-loving men and women, each one of whom has been able to add something to the world's knowledge.

I am happy indeed that our industry, which James F. Bell has referred to as "the ancient and honorable," is evidencing the vitality of youth in choosing for its guidance and proclaiming to all its members the theme, "Progress through research." I hope that the proceedings of this convention will impress us to such a degree that we will go back home feeling that each one of us can have a part in research that will be helpful to the industry.

EDITOR'S NOTE.—This article by L. J. Schumaker, president of the American

Bakers Association, was presented as an address at the national convention held in New York, Oct. 15-19.

DESCRIBE PRODUCT

I OUSEWIVES who know what goes into the baked goods they want are better prospects than those who lack such knowledge, according to the results An Address at the national convention of the AMERICAN BAKERS ASSOCIATION

of an exhibit and sale held by the Buffalo Zonta, Oct. 7, at which the baked goods of A. G. Stegmeier, director of the Associated Retail Bakers, were entered in the baking classification.

A radio announcer described each article which was on view for the members. In the case of baked goods, he went to some length to tell something about the ingredients and the importance of each in producing the finished item. All the baked goods were wrapped in cellophane. When the talk was over, the extensive display of baked goods by Mr. Stegmeier was not only sold out at once but there were also enough telephone calls from radio listeners to sell ten times the volume of baked goods available. These orders were filled as far as possible from Mr. Stegmeier's three stores.

SIDELIGHTS ON THE BALTIC STATES

By C. F. G. RAIKES

European Manager of THE NORTHWESTERN MILLER

FOR the time being Russia has assumed the leading role in the great drama that is being played by Germany and Russia in the Baltic countries. It would seem as if the former leading star has been completely played off the stage into the wings by the Russian villain of the piece.

I have come to know intimately in my travels for THE NORTHWESTERN MILLER, during the last 30 years and more, the various Scandinavian and Baltic countries that are so much in the limelight in the present phase of the war. I knew Finland when it was under Russia, as the Finland when it was under Russin, as the Grand Duchy of Finland. Its interests always have been closely allied with Sweden, which country largely was responsible for the development of Finland while it was under Russian rule. When Finland became a republic, after having heroically driven out the Russian Bolsheviks at the close of the last war, a great nationalistic campaign was in-augurated to eliminate the Swedish element in favor of Finnish nationalism. Swedish names of cities and towns were Swedish names of closes and towns were changed to Finnish names "Helsing-fors" became "Helsinki," "Abö" became "Turku," "Wiborg" was changed to "Viipuri" and "Finland" to "Suomi." The titles of commercial companies and firms, formerly rendered in the Swedish language, had to be changed into Finnish, with the Swedish name in parenthesis.

It is understood that Russia wants to have a part control of the Aaland (pronounced Oland) Islands, situated in the Gulf of Bothnia half way between the coast of Finland and Stockholm. principal port in the islands is Mariehaum, which is a stopping place for the passenger steamers that ply between Finland and Sweden. Undoubtedly these islands are of the greatest strategic value for commanding the entrance to the Bal-tic from the Gulf of Bothnia, on whose shores are located the coasts of Finland and Sweden. For this reason, both these countries are interested vitally in the control of the islands and the last thing they would want to happen is to have them occupied by such a dangerous power as Russia.

The occupation of Esthonia by Russian troops and the use of Reval and other Esthonian ports, together with the Latvian port of Windau and Libau, mean complete control of the Baltic by Russia. In addition, the islands of Dago and Oesel, off the coast of Esthonia, and commanding the entrance to the Bay of Riga, are to be developed as Russian air bases.

When these changes all go into effect Russia will have complete command of the Baltic, and Germany will never be able to control what was formerly known as a German lake, as her navy will be bottled up at one end by Russia and at the North Sea end by the British navy. Under these circumstances it is not surprising to read current press reports that great friction exists between German naval authorities and von Ribbentrop, who is blamed for being responsible for such a situation having arisen, especially as Russia has made no military concession in return. Many people are of the opinion that the Russian pact with Germany will result in the downfall of von Ribbertrop and ultimately lead to fric-tion between Hitler and his military and naval leaders.

If Finland becomes involved it looks as if Sweden will also be drawn into the vortex, especially if the Russians insist on occupying part of the Aaland Islands. In this event, what will become of Denmark, which, through sheer fear of Germany marching into Schleswig, signed a pact of nonaggression with that country some months ago? Will the Russians respect Germany's pact or will they continue the trail of Communism into Denmark and, eventually, perhaps to Norway? Germany would then find herself surrounded by Bolshevism and will truly be justified in claiming "encirclement," and, probably, will heartily wish that it was the type of encirclement she complained about so bitterly in months gone by. This outlook, of course, is mere supposition, for, as yet, there is no definite proof that Russia intends to become so aggressive as indicated above. Possibly, she will be content to get back the Baltic provinces, which were under Russian rule for so many years.

When I used to visit the Baltic States—such places as Riga, Libau and Reval—I always felt, and on several occasions was told by well informed people, that the newly formed states of Esthonia, Latvia and Lithuania could never exist for any great length of time without having Russia as a hinterland for commercial purposes. Before the World War Riga was a great Russian manufacturing center, and held a position similar to Manchester, England. Enormous industries flourished there. I remember seeing a rubber factory that reminded one of the Ford works at Detroit. It turned out enormous quantities of rubber boots, shoes and rubber articles of every description. After the Russians left, such factories all became derelict

and most of them have remained so ever since. The feeling against Russla was so intense that even if trade had been possible the Latvlans would not have considered it. However, it was apparent to any one familiar with the country that Russia was the only logical territory for trading purposes. The manufacturers could not possibly compete with manufacturers in other countries, such as England, France and Germany. Consequently, existence as individual nations was exceedingly precarious.

The population of Latvia is roughly 2,000,000, Riga, the capital, claiming 385,000, and Liban, the next largest port, 57,000. Libuania has an estimated population of 2,400,000, of which Kaunassknown as Kovno during the Russian regime—has 125,000. Metael, the principal port, already has been taken over by the German Reich and its population is only 38,000. Esthonia, which is the smallest of the Baltic States, has a population of only 1,132,000. Its capital, Reval (Tallin) has a population of 116,000.

A large percentage of the German population that is now being evacuated from Esthemia and Latvia consists of people of German descent, known as the "Balts." Centuries ago a wealthy class of German aristocrats, who became known as the "Baltic Barons," settled in the Baltic territory and acquired enormous estates, over which they ruled. When the country was under the rule of Czarist Russia the Balts were the leading landlords of the country and rented out their estates to the peasants for agricultural purposes. Eventually, they acquired large holdings in various industrial undertakings. When

the Baltic States were formed under the Treaty of Versailles, the wings of the Balts were somewhat clipped but, nevertheless, they continued to be a power in their respective regions. Now that they have received orders to leave the country immediately and to return to Germany their wrath against Hitler Is not surprising and it is said they are accusing Hitler of having betrayed them to Soviet Russia. However, if they remain where they are they would soon suffer the fate of other large landowners in Russia and Poland, so perhaps they are fortunate to escape with their lives even if they must live under Nazi rule and bave their property contiscated. The evacuation orders were carried out so rapidly that all personal property, except that which could be carried, had to be left behind.

After the World War these countries, owing to their inability to obtain their flour from Russia, became important mar-kets for American, Canadian and English mills and for some time a lucrative business in flour and cereals was done. In due course they developed their home production of foodstuffs to such an extent that they not only became self-supporting but, to a limited extent, exporters of farm produce such as butter, bacon and eggs. However, it does not take much imagination to realize how uneconomic It was for three states, with such small populations, each to maintain the expense of running a separate government. An additional handicap was that each little state set up a high tariff wall, thus mak ing it practically impossible to trade with each other. Had there been some way of creating a union of the three states, so that there could have been interstate commerce under one federal government, there would have been a better chance for their continued existence.

From all appearances, it is only a matter of time before the present states will all revert entirely to Russia. Rus-sian troops already have entered Esthonia and once having obtained a foothold the present Baltic States are doomed. After the last war the Russian Bolsheviks were driven out of Esthonia with the help of British naval and military forces, and Germany, in the same way, helped land, although Finland, with her White Army, was principally responsible for expelling the Bolsheviks in 1918-19. The manner in which this army was raised by the Finns while the Bolsheviks were still in power was remarkable. When its organization was completed although the army was almost devoid of arms-the Bolsheviks were attacked with the crudist form of weapons, consisting of sticks, spades, pitchforks, etc., and were overcome by sheer courage and heroism. All those who sided with the Communists were ruthlessly hunted down and put to death after summary trials.

In Abo there was a sub-agent for a Helsingfors flour agent, who represented one of the large Minneapolis milling companies, who, with his two sons, met a tragic death in this way. He was a man of considerable culture and education but, unfortunately, favored Communism and imbued his sons with the same political tenets. In spite of his political leanings he was an excellent business man and to be trusted in every way. When I heard of the manner of his death I remembered that he had once written to me, asking me to send him a copy of a well-known Socialist magazine, published in London, which made me first aware of his political views.

FSCC PURCHASES MORE CORN MEAL AND GRITS

Awards Are Made to 27 Milling Companies
—Deliveries Scheduled in Period Urom
Nov. 16 to Jun. 6

Washington, D. C.—Additional purchases of corn meal and corn grits for relief distribution were announced by the FSCC on Oct. 30 from 27 milling companies. The purchases were on offers filled by the companies on Oct. 21. Deliveries are to be during the period beginning Nov. 16 and ending Jan. 6.

Total purchases of corn meal amounted to 10.160 bbbs. and of write 10.600 bbbs.

Total purchases of corn meal amounted to 194,600 bbls and of grits 10,600 bbls Awards were made to the following

LARGER OPERATING PROFIT BY UNITED GRAIN GROWERS

WINNIPEG. MAN.—An operating profit of \$646,602.95 for the fiscal year ended July 31, is shown in the financial statement of the United Grain Growers, Ltd. This compares with \$251,613.40 for the previous year and \$137,846.51 for 1937.

Out of this amount provision was made for interest on bonds, \$141,216.45; directors' fees, \$7,131; executive salaries and legal fees, \$28,291.67; annual meeting expense, \$15,555.72; and for provision for depreciation of capital assets \$433,643.41. Bond discounts and expenses written off amounted to \$19.878, while a profit arising from redemption of company's bonds during the year gave a credit of \$14,075.80. After provision of \$9,000 for dominion and provincial income and corporation taxes a net profit for the year of \$5,662.30 was left. This, added to the amount already at credit of the earned surplus account, left to be carried forward as earned surplus, \$306,051.51.

The balance sheet shows working capital of the company at \$1,159,764.38, up \$146,209.11 from last year. After deduction of depreciation reserve which now stands at \$4,696,475.01, the capital assets of the company are carried on the balance sheet at \$6,305,139.15. Paid up capital of the company is \$3,189,401.51. Total of general reserve and surplus is \$1,975,437.54.

HERMAN STEEN AMONG GUESTS AT MEAT PACKERS' BANQUET

Chicago, Ill.—Herman Steen, vice president of the Millers National Federation, Chicago, was among special guests at the annual hanquet of the Institute of American Ment Packers, held at the Palmer House, here, the evening of Oct. 24. Seated at the speakers' table he hob-nobbed with such industrial leaders as:

W. S. Knudsen, president, General Motors Corp; Charles H. Swift, chairman of the heard, Swift & Co; C. C. Conway, board chairman, Continental Can Co; Sewell Avery, president, Montgomery Ward & Co; George A. Eastwood, president of Armour & Co., and many other prominent men in business and financial circles.

Mr. Knudsen was the guest speaker. This was the thirty-fourth annual convention of the Institute of American Ment Packers.

INDIANA WATER MILL AUCTIONED

JASPER, IND.—The deed to the Dubois (Ind.) Milling Co. has been turned over to L. G. Bohnert of this city, whose hid of \$1,500 was the highest at a recent auction sale. The flour mill, one of the few operated by water power in the state, is on the bank of the Patoka River at Dubois.

NONMEMBERS MAY OBTAIN COST ACCOUNTING MANUAL

There is widespread interest among millers in the cost accounting manual for small mills, according to the Millers National Federation, which recently revised and republished the manual and distributed copies to its members. The manual was originally brought out in 1929, but was out of print for several years until last month.

"While the small mill manual is primarily designed for the use of the smaller units of the industry, as its name indicates, many medium sized and larger companies are putting it to use," writes a federation officer. "This is probably due, in part at least, to the fact that no other mill accounting manual is now available. At any rate, this office has had a good number of requests from mills which do not classify as 'small' for extra copies of the manual, also calls from public accountants who do the auditing for milling companies here and there.

"As a rule federation publications are not made available to nonnember companies, but in the case of the small mill manual this is not true. The federation is offering the manual for sale to nonnember mills, public accountants and others who may be interested."

It has also been announced that the federation is beginning work on a revision of the Uniform Cost and Accounting Manual (sometimes called the large mill manual), which was first published in 1926. In this undertaking, which may require a year or more, it has been assured of the co-operation of the various regional mill accounting associations.

SPACE GUARANTIES NECESSARY AT FORT WILLIAM, MONTREAL

Buffalo, N. Y.—The grain situation has reached the stage where a "space guaranty" is practically in effect because of congested conditions at Montreal and Fort William. According to reports reaching this city, Montreal is refusing charters unless there is an absolute asact analysis. It was suggested that a move should be made to adopt a standard, such as 13.5% or 15% moisture for all laboratories, and a committee was appointed to investigate the problem before the next meeting. On the committee are G. Moen, Washburn Crosby Company, chairman, Marjorie Howe, Russell-Miller Milling Co., and A. D. Wilhoit, A. D. Wilhoit Laboratories.

BREAD IN THE STAFF OF LIFE-

ALLIED MEN COMPLIMENTED AT ATLANTA STAG DINNER

ATLANTA, GA.—At the recent stag dinner meeting of the Atlanta Bakers Club in the Piedmont Hotel, Charles R. Roberts, vice president of American Bakeries and president of the club, complimented allied men on their contribution to the stability of the idnustry in the South.

Winners of attendance prizes at the

meeting were Alton King, King's Bakery; Jack Lanum, Anheuser-Busch, Inc., Atlanta, George Grant, purchasing agent, American Bakeries Co., Atlanta; Frank Rowsey, editor, New South Baker, Atlanta; C. M. McMillan, secretary of the Southern Bakers Association, Atlanta; J. N. Mahanay, railroad representative; James Stroupe, Anheuser-Busch, Inc., Atlanta, and George Wentz, Rogers Bak-

Club plans for the rest of the year were worked out and the next meeting will be held Nov. 6 as a Thanksglving party for the ladies. At this time election of officers for the 1910 term will be held. On the nominating committee are George Wentz, Rogers Bakery, Atlanta; Horace Small, Small & Estes Bakery, Gainesville, Ga; Roy Caudle, the J. H. Day Co., Atlanta, and E. J. Cox, American Machine & Foundry Co., Atlanta.

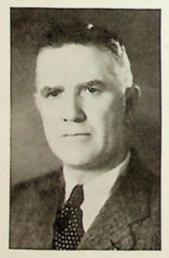

OHIO CO-OP BAKERY SOLD

The Mahoning Co-operative Bakery, Inc., 2324 South Street, Youngstown, operated as a wholesale and retail plant by a company headed by Stanley Greggo, was sold to Myron Wagner, of Cleveland. He was formerly with the Cleveland Grocers Baking Co. His new purchase at Youngstown will be known as the Monarch Baking Co.

C. S. JACOBSEN, ALLIED REPRESENTATIVE, DIES

CHICAGO, ILL.—Chris S. Jacobsen, one of the old time and well known allied men in the Middle West, died Oct. 28 at his home in Oak Park, Ill. He had been in ill health for the past few years.

Mr. Jacobsen was born in Stavanger, Norway, immigrating to this country at the age of 15 and settling in Kookuk, Iowa. One of his first connections with the baking industry was as a flour salesman in Iowa. Later he moved to Chicago and was with J. W. Allen & Co., bakery supply house, for 22 years. He was a sales representative and later western manager for the Malt-Dinstase Co. for many years. When Stuart Lee Jaffray, Inc., Brooklyn, was formed a

The Late C. S. Jacobsen

few years ago, Mr. Jacobsen became its western manager, and was with that company until his death.

Mr. Jacobsen was a founder of the Chicago Bakers Courtesy Chub, and served as its vice president for several years

He is survived by his widow, Inga Jacobsen, two daughters, Jeanette Crowell and Lucyle Tollkuchn, a brother, Harvey, of Omaha, Neb., and two brothers and a sister in Norway.

CAMPBELL- TAGGART TO MOVE HEADQUARTERS

Executive and Managerial Organization, W.: Move Soon From Kansas City to Indi —Buying Office to Stay

Huying Office to Stay

KANSAS CITY, Mo.—While no official
announcement has yet been made it is
possible to state that plans are substactially completed for the removal at an
early date of the entire executive and
managerial organization of the Campbell.
Taggart Associated Bukeries, Inc., frat.
Kansas City to Dallas, Texas.

The proposed move does not include the Campbell-Taggart Research Cornwhich under the direction of C. J. Patterson will remain at Kansas City, occupying the handsome building recently provided for its use.

It is understood that formal announcement of the company's plan will be made within a week or 10 days.

BREAD IS THE STAFF OF LIFE

LAKE FREIGHT RATES UP

WINNIPEG, MAN.—Lake freight rates for the movement of Canadian grain from lakehead ports, particularly to Buffalo, tightened considerably last week with space for wheat to the United States lake port trading at equal to 4½ bu, Canadian funds. Vessel brokers were asking 4c to 4½ to Port Colborne for wheat, and the space to Montreal was firm at 7c, with owners of the grain to guarantee to unload or pay demurage charges.

HARRY REINSHAGEN IN THE EAST Harry L. Reinshagen, Minneapolis manager for the Cereal By-Products Co. is in the East.

NATIONAL BISCUIT TO BUILD \$1,000,000 DENVER PLANT

Denver, Colo.—Within a year the National Biscuit Co. expects to complete a \$1,000,000 "straight-line production" plant at Fortieth Avenue and Steele Street here. The new factory will supplant the bakery now in use at Nineteenth and Blake Streets.

The new one-story structure will be constructed on a site measuring 1.200.664 feet, adjoining a siding of the Burlington railroad. The plant will serve the entire Rocky Mountain area, since the nearest of the company's plants are at Kansa City, Oklahoma City and San Francisca.

Louis Wirsching, manager of the firm's building department, will arrive from New York City within a few weeks to arrange for the construction, which is expected to get under way by January, C. K. Brace, sales manager in Denver for the firm, has announced.

The old plant which will be abandoned was erected in 1888 by Frank W. Crocker and housed the Crocker Bakery, which later consolidated under the name of the American Biscuit & Mfg. Co. It was later known as the American Co, which was included in the original organization of the National Biscuit Co. in 1898.

RALPH PICKELL, CHICAGO MARKET ANALYST, DIES

CITICAGO, ILE.—J. Ralph Pickell, commodity market analyst, died Oct. 23 in the Oak Park (Ill.) Hospital at the age of 58 after a brief illness. Mr. Pickell had been editor of The Roundup, a commodity forecasting magazine, for 25 years. He also published a daily grain market and stock news service. Mr. Pickell was recognized as an authority in estimating the total production of both spring and winter wheat crops and frequently was a consultant on crops for the government. He is survived by his widow, a son, his mother, two sisters and five brothers.

MILLERS DISCUSS SALES AND OPERATING PROBLEMS

"The Three-legged Stool" was the subject of an address by Howard W. Files, vice president in charge of sales, Pillsbury Flour Mills Co., Minneapolis, at the fall meeting of District No. 4, Association of Operative Millers, held at the Nicollet Hotel, Minneapolis, on Oct. 28. To say that the address was well received would scarcely be adequate, for it was talked about freely in that "after-adjoirnment" period when millers feel at liberty to speak their minds, unhampered by conventional politeness; and although the metaphors involved may seem a little incongruent, the opinion voiced by one member of a group, that the talk "hit the bulls-eye," was as high a compliment as any ever offered anyone.

It would be impossible to convey in type the full significance of Mr. Files' address, and the reason for this is also the reason for conventions and meetings of men whose work and interests are interdependent. Every word said indicated a depth of sympathetic understanding of the operative miller's importance in the milling industry, but the speaker dismissed at once the prenitive of super-importance. The "three-legged stool" was likened to a base upon which management stood or fell. The three legs the stool cannot stand, and with any one longer than the others, the base goes awry and management is disadvantaged.

Mr. Files did not place blame on any particular one of the three legs, but his talk was a strong and sensible plea for genuine co-operation. He stressed the proposition that the sales department must have assurance that the products delivered will meet the customers' demands, emphasizing the necessity for uniformity. The sales department, he said, had no right to expect this unless the raw material was suitable and means were provided for achieving uniformity and quality through the collaboration of the operative miller and the cereal chemist.

Robert T. Beatty, of THE NORTHWEST-ERS MILLER and MILLER PRODUCTION, introduced Mr. Files, but before the latter could begin his address a bit of fun was interjected by the appearance, first at one door and then another, of a man with an extremely serious and excited mein who said he was expected to make a speech for the Community Fund committee. Upon being convinced that the committee must be meeting elsewhere, if at all, he decided to give a little talk, anyway. As may have been surmised already, he said practically nothing but did a good job of it.

Following the address by Mr. Files, the meeting was given over to discussions of many and varied problems suggested by questions sent in by members and others at the request of R. R. Brotherton, superintendent for the Bay State Milling Co., Winona, and chairman of the district.

There was strong interest in moisture testing, but the consensus of those who spoke in answer to a question submitted seemed to indicate that even fair allround satisfaction in most of the equipment available today is lacking. sponse to a question stated directly, "What difference is there in the operation of break rolls running 500 or 360 r.p.m?" [the speeds mentioned referring to the fast rolls involved], several millers and milling engineers who spoke at the request of Chairman Brotherton expressed varying opinions. Mere opinions were not always considered adequate answers. however, and before the subject was finally dropped, energy, heat, work and static and dynamic balance came up for consideration. Generally speaking, present speeds of rolls in American mills re-

ceived the approval of a number of the leading milling superintendents.

Other subjects discussed related to the relative merits of sifters and centrifugal reels as bolting mediums. Centrifugals had few if any friends, and there was a disposition to consider the matter a book that had been closed for many years. The percanial question relating to insect infestation came up with the direct query as to the most important source. Second-hand bags received a liberal amount of blame, but a goodly number of millers offered the opinion that the most prolific source is the wheat entering the mill. It was contended that even though the mill-nix might be free from adult insects at the time of grinding, there was plentiful evidence that it was seldom if ever free from insect life in the form of eggs.

About 70 were present at the luncheon.

About 70 were present at the luncheon. Among those from outside the district were Herman Trapp, Buffalo; C. W. Partridge, Kansas City; C. P. May, Crete, Neb; S. H. Stoltzfus, Kansas City; Stewart White, Rapid City, S. D; and H. H. Arendall, Kansas City, Mo.—E.S.M.

GROUP TO HEAR LMPLOYEE EXPERT

CHICAGO, ILL.—Alfred P. Eitzel, director of employee and public relations for the city of Chicago, will be the featured speaker at the regular monthly meeting of the Society of Grain Superintendents, which will be held the evening of Nov. 7 at the Atlantic Hotel. Those elected to offices the previous meeting were: president, C. J. Alger, Corn Products Refining Co; first vice president, Fred A. Rech, Aready Farms Milling Co; second vice president, Ralph A. Wilson, Swift & Co., and secretary, H. A. Keir, Arcady Farms Milling Co.

TWIN CITIES SELECTED FOR FOOD STAMP PLAN

The selection of Minneapolis and St. Paul, Minnesota, as centers for the operation of the food stamp plan has been announced by officials of the Federal Surplus Commodities Corp. Under the plan, surplus foods are distributed to persons on relief lists. The actual operation of the plan is expected to get under way in about three weeks. Officials are now checking names of persons eligible to receive stamps.

ADOLPH ELSAS, EXECUTIVE OF FULTON BAG CO., DIES

Adolph Elsas, vice president of the Fulton Bag & Cotton Mills, died Oct. 29, at his home in New York City. He had been in ill-health for some time. A son of the founder of the Fulton business, he joined the company after leaving college, and had been actively identified with it all through his business life. He was in his early sixties, and is survived by his widow and three children. Burial was at Atlanta, Ga., Nov. 1.

CHEMISTS' TOPIC ANNOUNCED

Dr. E. Elion, of The Hague, will address the Cincinnati Section American Association of Cereal Chemists, on "Gas Production and Retention in Dough" at a meeting to be held in Columbus, Ohio, Nov. 4. Dinner will be served in the Blue Room of the Fort Hayes Hotel.

\$300 PRIZE SAIETY CAMPAIGN

The Cole Baking Co, of Bluefield, W. Vn., has launched a safety contest which will be run for eight weeks. Over \$300 in awards will be given to winners chosen by impartial judges. A series of weekly advertisements is being run in the two local newspapers by the campaign sponsors.

Consignment of Specially Packed King Midas Flour Ready for the Byrd Antaretic Expedition

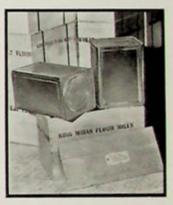

King Midas Again Goes With Byrd to the Antarctic

TOR the third time King Midas flour has been chosen to accompany Admiral Richard E. Byrd on an antaretic expedition. It was among the supplies taken on the first and second voyages to Little America, and now figures in the commissary arrangements of the United States government's colonization expedition that is about to sail for new explorations which are expected to add several hundred thousand square miles of territory to the domain of the United States.

The consignment of flour from King Midas Flour Mils, Minneapolis, to the United States Antarctic Service, Building 28, Navy Yard, Boston, Mass., the point from which the expedition will sail, comprises 25,800 lbs of hard wheat flour, 800 lbs of graham flour and 500 lbs of rye flour. It is all packed in 5-gal double friction top tins, each containing about 25 lbs of flour. The cans are packed two to a case in wire-bound wooden boxes, specially designed for the exigencies of antarctic transportation and storage.

While the purchasing department of the Department of the Interior has not yet provided complete details on some of the foods that will be used on the ex pedition, Colonel Albanus Phillips, who is acting as food counsellor of the project, states that in addition to the King Midas consignment, which provides for the bulk of the expedition's flour needs, there will be mixes from Doughnut Corp. of America, Eugenia Mills and the Seidel company. Kellogg and Cerevina breakfast cereals will be used. Colonel Phillips is president of the Phillips Pack ing Co., Cambridge, Mass., and large orders have been placed with his firm for a two-year supply of canned soups, vegetables, tomato juice, spaghetti and meat and fish products. These foods have been crated in water-proofed cases.

The expedition is the first major government experiment in actual colonization to establish undisputed claim to a vast and possibly valuable new territory, the total area of which is larger than the United States and Mexico. For nearly two years 100 men will live on the barren Antarctic continent, their only contact with civiliration by short wave radio, and dependent for food supplies upon their cargo of canned, dehydrated, packaged and barreled provisions. Admiral Byrd will undertake to map and stake out for the United States Antarctic lands on which the Byrd and Ellsworth expeditions of recent years planted the American flag. In official Washington circles the Antarctic Continent is re-

Hour Tins and Wooden Crates Designed for the Antarctic Trade

garded as important because of its possible value to future air travel and its availability as the southernmost air base. Great Britain, Germany and Norway, among others, also have evinced interest in securing claims based on Antaretic explorations of their nationals.

Congress already has provided \$340,000 for the expedition and authorized Dr. Ernest H. Gruenin of the Department of the Interior to claim for the United States approximately 675,000 square miles

Three ships will be used to transport the explorer-scientists to the wind-swept wastes that largely comprise the Antaretic Continent.

PACKAGE DIFFFRENTIAL SCHEDULE REVISED

A revised package differential schedule effective Nov. 6, 1939, has been announced by the Millers National Federation. This is the first change which has taken place in the schedule since May 9, 1938.

The principal changes have to do with jute differentials, due to the recent continued advances in burlap prices. The 140-1b jute is now listed the same as basis instead of 5c under basis. The 98-1h jute is now listed 5c over basis instead of the same as basis. The only other change is a 5c reduction in the differential on the 98-1b paper container.

WAR, DROUTH, HIGHER WHEAT PRICES BRING SCANT FLOUR SALES

Southwestern Mills' New Business Amounts Only to 18% of Capacity—Export Trade Stagnant, With Philippines Out—Clears Holding Firm

The war, the drouth in the Southwest and the slightly higher price of wheat all these influences were ineffectual as stimuli to buying during the week, and flour sales dropped to new lovels. Winter wheat mills of the Southwest

were able to average only 18% of capacity in new husiness, compared with 19% a week ago and 36% the corresponding period last year; while major spring wheat mills made a somewhat better showing in relation to

ter showing in relation to their capacity—27%, compared with 38% the week before and 44% a year ago. It is reported that bakers are rather certain, in spite of the present low flour prices, that the market will not advance as long as there is a large Canadian carry-over.

The large supplies in bakers' and distributors' hands that were contracted for during the frenzied buying of early September are lasting longer than millers had hoped or expected, but some enthusiastically believe that buying interest will pick up very soon. It is said that buyers are heginning to echo low quotations which, they say, were made to them earlier. Many millers regard this as a usual preliminary to buying. Directions are almost at a standstill.

PRICES AND CLEARS

Prices on both spring and winter wheat grades were mostly unchanged, with clears showing typical strength. Mills in the Northwest are reported fairly well oversold on clears, while mills and the trade alike were hunting for small quantities of the winter wheat variety.

EXPORTS

Trade oversea is pretty stagmant; even business with the Philippines has dried up. Chinese buyers' ideas are, to the American miller's way of thinking, entirely out of line. Trade with Central and South America has slackened up, although regular bits have been going from the Southwest to the West Indies. European buying has almost disappeared, for the Holland government seems uninterested at the present time. The government subsidy is unchanged.

FINAL DATE FOR FLOUR EXPORTS EXTENDED

WASHINGTON, D. C.—The final date for export shipment under the 1938-39 wheat flour export program has been extended from Oct. 31, 1939, to Dec. 15, 1939, the division of marketing and marketing agreements of the Department of Agriculture announced Oct. 27. Sales for export were made under this program from Oct. 28, 1938, through June 30, 1939.

Extension of time has been granted to permit exporters to complete the shipment of flour sold for export. The exporters have found it impossible to complete exportation by the Oct. 31 date because of the European situation which has disrupted ocean shipping schedules and has caused the withdrawal of many vessels from their usual trade routes.

The final date on which exporters can make application for export payment under the program has been extended from Jan. 2, 1940, to Feb. 15, 1940.

MILLETERS

Demand for millfeed has increased sharply during the week, with the continued drouth in the Southwest. Lighter production is holding offerings back and giving the eash market a firmer undertone than for some time. The advent of really cold weather over the "snow helt" of the United States is expected to enhance the demand for millstuffs even further. Eastern and southern interest has quickened with the deterioration of pasturage, and trading became very active in mountain sections of the West, where heavy snows have made an increase in feeding activities necessary.

PRODUCTION

Mills which account for approximately 61% of the total production of the United States reported to The North-Western Miller an output of 1,360,624 bbls for the week ending Oct. 28, compared with 1,446,937 bbls the previous period. The corresponding week a year ago, production was 1,452,753 bbls, two and three years ago it was 1,421,778 and 1,312,168 bbls, respectively. Mills in the larger producting sections reported decreases in production from the previous week—spring wheat mills of the Northwest, about 46,040 bbls, southwestern winter wheat mills, 18,000 bbls, and Buffalo mills, 9,520 bbls.

Details on the week's production may be found, in tabular form by producing sections, on page 37.

ENTOMOLOGIST ADDRESSES NORTHWEST SECTION, A.A.C.C.

The broadness of the term "infestation" was brought out at a meeting of the Northwest Section, American Association of Cereal Chemists, in Minneapolis, Oct 27, when Dr. Harold H. Shepard, professor of entomology at the University of Minnesota, gave a talk on insects of primary interest to those engaged in the grain trades. The two principal types of bugs found in mills and elevators are moths and beetles, he said. Weevils are a part of the beetle family, but their activities are centered on grain, rather than ground cereal products.

The difference between the flour beetle and the weevil is that the latter has a snout on the end of which are jaws designed to bore into a grain. Flour beetles, on the other hand, are not capable of gnawing into a whole grain, their feeding being done on dust and ground material.

Flour moths, the speaker brought out, inflict most of their damage by the webbing they leave in spouts and on bolting cloths. This particular moth, he said, does no cating at all during its adult stage, devoting its entire time to the spinning of webs and laying of eggs. Its adult life is comparatively short—probably about two weeks—while a beetle sometimes lives as long as three years. A good share of that time is spent in reproduction, a single beetle being capable of laying from 50 to 200 eggs.

A point of interest brought out in Dr. Shepard's talk was concerned with ways in which the origin of infestation in cereal products might be ascertained. If infestation is found only several weeks after the flour was packed, and if the insects are found in the center of a sack, the probability that they were in the flour at the time of packing is strong. This is because beetles prefer to be near the surface of flour, and would not penetrate to

the center in such a short length of time. The speaker pointed out that infestation probably comes from the car in which flour is shipped if the beetles are found only on the sacks near the floor or next to the sides of the car, while if they are on the surface of all bags, the trouble may have started with the bags themselves.

BAKERY TRUSTEESHIP CONTINUED

Judge John P. Egan in the Court of Common Pleas at a hearing on Oct. 26 in the matter of the trustceship of the 7 Bakers Brothers, wholesate bakers, of Pittsburgh, after hearing the report of the receivers granted the firm power to continue business until Jan. 10, 1910, when the matter of a further extension will be considered.

\$200,000,000 for PESTS

Yet Crop Destroying Insects Inflict Damage Representing 10 Times as Much

Probably \$200,000,000 is spent annually to kill insects whose damage to crops is estimated to cost 10 times as much. Indoors, the annual services of pest control operators in the United States cost \$17,-500,000, not including the sale of exterminating products.

These figures were cited by H. G. Irving Sameth, retiring president of the National Pest Control Association, during its seventh annual convention in New York City, Oct 23-25. Pest control operators attended convention clinics on such important aspects of their business as fumigation, termites, rats and mice, chemicals and formulas and safety measures.

Among educational booth exhibits were those of the American Cynnamid & Chemical Corp., E. I. du Pont de Nemours & Co. (R. & H. Chemicals Division), Innis, Speiden & Co. and S. B. Penick & Co. Government and other authorities on entomology attended the convention.

DROUTH PUSHES FEED FUTURES INTO RISE

Slow Corn Movement and Improved Demand Also Strengthening Factors in the Near-by

After a sharp gain in both hran and shorts the last part of last week, millfeed leveled off early this week as mills offered more plentifully and operators took profits. Drouth conditions in the west and central states, together with the slow-

ness of the corn movement and increasing demand from the east, broke the even movement of the market the middle of last week. Buying of feed for near-by months was brisk. Considerable support was received

from the eash feed situation, which was strong and sharply higher in price. Improvement in other commodities was also a stimulating factor.

Closing prices of millfeed futures on the St. Louis Merchants Exchange in dollars per ton, Monday, Oct. 30:

									shorts	Bran	Midds.
November									24.90	21 7	22.00
December										22.50 ·	22.00
January										22.85	22,99

LOOSE-WILES PROFITS UP

New York, N. Y.—The Loose-Wiles Biscuit Co. and subsidiaries for the nine months ended Sept. 30 show not profit of \$691,206, after federal income taxes, depreciation and interest, compared with \$690,039 in the corresponding period of 1938. Third quarter indicated net profit is placed at \$311,566, compared with \$432,939 the previous year.

FEED PRICES HOLD ABOUT STEADY; OFFERINGS NOT PRESSING

Millfeeds Average Slightly Higher as S. W. Drouth Is Felt— Distributors' Stocks Diminish, But Buying Generally Determined by Current Needs—Linseed Meal a Little Lower

Feed markets showed little change during the week, since offerings of most feeds were not particularly pressing and demand was not urgent. The index number of wholesale feedstuff prices was down only slightly to 110.2, compared with 110.5 a week

Prices About the Same

with 110.5 a week earlier and 92.7 a year ago. Production of wheat millfeeds dropped sharply, but output of soy-

bean and linseed meals was reported to be somewhat larger.

Millfeed offerings dropped off further at Minneapolis as production decreased, and buying quickened. Storage stocks of bran and middlings are reported moderate, and day-to-day offerings by mills were being taken by distributors and dealers at slightly higher prices. The drouth in the Southwest finally had its effect in increasing demand.

effect in increasing demand.

Pacific Coast millfeed markets fluctuated with local supply and demand conditions. Unsatisfactory feeding ratios tended to limit supplementary feeding. Relatively low prices for barley and alfalfa hay resulted in considerable substitution of these feeds for concentrates.

Oil seed cakes and meals averaged slightly higher, with a slight decline in

linseed meal more than offset by a moderate advance in soybean meal and a slight gain in cottonseed meal Advances in prices of soybeans as a result of increased export inquiry were a strengthening factor in the soybean meal market. Linseed meal was in ample supply at most markets and prices were lower. Some selling pressure as a result of increased offerings was apparent at Buffalo, where two mills were operating at about 50% of capacity. Meal was in only moderate request in California, but recent price advances were well maintained since mills were applying the hulk of current production on previous orders. New crop production of peanut meal has not yet started since shellers were paying higher prices for peanuts than crushers were offering.

Corn by-products feed markets were somewhat unsettled. Gluten feed and meal prices held unchanged at the leading markets but hominy feed advanced slightly at Buffalo, Kansas City and Chicago. Distillers' dried grains, on the other hand, declined sharply at Buffalo and Chicago, where offerings exceeded current trade needs. Brewers' dried grains were somewhat down at leading markets. Little change occurred in the market for other feeds.

DROUTH IN SOUTHWEST **BOOSTS WHEAT PRICES**

Markets Pay More Attention to Domestic News Than to War Developments— Rains Insufficient in Southwest

Wheat traders are apparently paying more attention to domestic news and crop reports than to political and war developments in Europe, according to the actions of the wheat market during the past week. Although actual armed

conflict seems to be rather restricted. numerous speeches indicate that the war will be of long duration. Wheat

prices, however, were guided by weather reports from the Southwest rather than the possible effect of the war on the market

Although rains were reported in many sections of the winter wheat area, the total precipitation received was believed to be far short of needs. In Oklahoma, rainfall was reported only in the relatively unimportant producing areas, while in Texas and Kansas, the moisture did little to alleviate a very serious situation.

Largely as a result of drouth in the Southwest, the December option at Kansas City gained 11/sc, with Minneapolis up the same amount and Chicago Ic higher.

For the second successive week Winnipeg wheat futures prices failed to make headway despite further good export sales and strength in southern markets owing to Southwest drouth conditions. Buying, while good at times, was mostly spasmodic and again there appeared to be sufficient wheat on tap to satisfy buyers of futures.

Exporters were credited with purchases of about 7,000,000 bus of wheat, but a little less than half of this total appeared to represent new sales, with the balance the covering of old business. New business included at least three full cargoes to United Kingdom and one cargo to Norway. The remainder of the trade was made up of varying amounts to Belgium and Denmark.

Mills covered flour sales from time to time, while inter-market spreading between Winnipeg and Chicago was again in evidence, chiefly involving purchases of Winnipeg May against sales of the same position at Chicago.

Export trade in this country has failed to materialize, and although a fair amount of wheat from Canada has been sold, the total has been disappointing to shippers.

Wheat markets of the Pacific Northwest are lifeless. Beyond three cargoes sold a couple of weeks ago to Siberia, two of which have been shipped already, nothing further has been heard. Space is very scarce and high at \$9.50 ton. The government has shown little tendency to get into the market. Mills are not interested in buying because flour bookings are small. They take special types of wheat which they want, but are not actively in the market.

Crop conditions were still unfavorable in a number of important areas. Heavy rains continued to delay seeding in several European countries, including Hungary, France and Germany. Heavy rains in Argentina were eausing rank growth and lodging of the wheat crop which is now approaching harvest. The Australian crop was reported mostly in satisfactory condition but moisture was still needed in some sections. Fall rains in Canada were well above last season in Manitoba and Alberta but were considerably below in Saskatchewan.

Domestic cash wheat markets advanced slightly, influenced principally by relatively light receipts since milling demand remained dull and export trade continued

Minneapolis the cash wheat market situation held very firm, more be-cause of limited offerings than any activ-ity in the demand. Although Minneapois receipts of all classes of wheat totaled 881 cars for the week, less than one half of this quantity was placed on the market for open sale.

At Kansas City final prices were %cpremiums offset by the firmness in the futures, and cash wheat closed about unchanged from a week ago. Receipts were moderate, totaling 320 cars at Kansas City and 1,075 cars at nine winter wheat terminals.

COTTON INTEREST REVIVES: SLIPS LATER IN PERIOD

Bemis Bro. Bag Co.'s cotton goods index, a composite figure reflecting wholesale prices of principal cotton cloth used in bag making expressed in cents per yard of cloth, is 4.93 as compared with 3.83 a year ago. Bemis composite figure reflecting duty paid early shipment prices of heavy and lightweight Calcutta burlap expressed in cents per lb of cloth is 14,40 as compared with 7,69 a year

NEW YORK, N. Y .-- Although cotton prices made gains during the week, these were lost later on falling of interest. Better new buying from trade and speculative quarters was apparent, the first revival of interest since the September boom. Picking was practically finished in most sections of the cotton belt, and weather there was showery. Export interest declined and shipments were poor. England was reported negotiating for Egyptian cotton, which advanced in price.

Burlap prices for the first time in several weeks were lower, although spot and near-by goods continue scarce. The abnormal difference between forward and near-by shipments was narrowed for the first time since declaration of war. Demand continued light.

BROOKLYN DIAMOND JUBILEE

NEW YORK, N. Y .- The seventy-fifth anniversary Diamond Jubilee banquet and ball of the Merchant Bakers Association of Brooklyn and Queens, held at the Hotel St. George, in Brooklyn, Oct 24, drew together a group of 887 members and guests, the largest in the history of the organization. Walter G. Bauer, president, headed the banquet committee, nd George Fiedler was toastmaster. Gifts were presented to the president, Otto Schimmel, the secretary, Michael Scheblein, and the treasurer, Fred Jahn. Certificates of honorary membership were given to John Schmid, Charles Anders and Hermann Von Thun.

IMPROVED FACILITIES AND EQUIPMENT at the AMERICAN INSTITUTE OF BAKING

UT of a mare of WPA street widening and improvement without, and A.I.B. construction and alteration within, an extensively renovated and recquipped American Institute of Baking has just emerged. Two months ago Chicago's Fullerton Avenue, site of the baking industry's technical and educational headquarters, was an impassable line of men, machines and excavations—and the institute itself was undergoing change from foundation to roof. The changes are now completed, and all three bakeries of the institute school, through the cooperation of allied firms farsighted enough to see the value of training the industry's personnel, have the advantage of the leavest mend it consumers.

of the last word in equipment.

In Bakery No. 1--largest of the institute's three bakeries, designed for training on a wholesale bread scale—the Petersen Oven Co. has installed a new Ec-Tri-Flex Tray Traveler, and Anetsberger Bros. a new Anets oil-fired Oven-Steamer, which the Petro-Nokol Co. has equipped

with a new Petro Burner.

Old proof boxes have been replaced by the Union Steel Products Co. with a new three-rack air-proofing system proof box, with air conditioning unit.

Complete new flooring (product of the

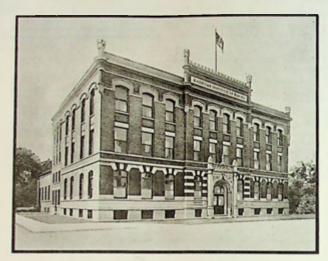

Complete new flooring (product of the Holt Hardwood Co.), as well as new equipment, has been installed by the Cincinnati Floor Co. in Bakery No. 1—maple strip-on-edge flooring in the oven room, and maple herringhone pattern shop block in the make-up room. To keep these fine floors in condition the G. H. Tennant Co. has consigned a Tennant Buffing Machine.

The large Duhrkop brick peel oven already a part of the equipment of Bakery No. 1 remains to give students valuable training in using this type of oven.

Bakery No. 2—for experimental baking

Bakery No. 2—for experimental baking and cake and variety products training—has been equipped by the Fish Oven & Equipment Co. with two new revolving tray ovens, by Anetsberger Bros. with a new Anets streamlined air-conditioned Rol-a-Way Cabinet Proof Box, by Anheuser-Busch, Inc., with a new three-section Dough Control Refrigerator, by the Coolerator Co. with a Coolerator Bakery Refrigerator.

ery Refrigerator.
Drehmann De-Aird Brick Flooring has been installed. It extends along the

The American Institute of Baking

corridor into Bakery No. 3, where students receive instruction on a retail production scale. Anetsberger Bros. have equipped this bakery with a streamlined, air-conditioned Cabinet Proof Box. An oven steamer was added for the Hubburd double-deck gas-fired hearth oven, the Fish ovens and proof boxes of Bakeries No. 2 and No. 3.

The Service Caster & Truck Co., Bond Foundry & Machine Co., Robert W. Kerber & Co. and the Faultless Caster Corphave provided new wheels and casters for racks and other shop equipment, and the Bond Foundry & Machine Co. a caster allignment unit.

The Union Steel Products Co. has reconditioned and regalvanized its racks consigned to the institute.

Likewise interested in the institute's work, the Chicago District Ice Association is furnishing ice for the Coolerator in Bakery No. 2.

The largest classroom of the institute

has been sound proofed and equipped with filter ventilation, and this, along with other classrooms and the student chemical laboratory, has been fitted with modern lighting fixtures.

The research laboratories, service laboratories and students' clubroom of the institute also have been reconditioned, so that students and staff will have the best possible facilities under the intensive working conditions which are necessary.

Because many A.I.B. students are on leave from bakery or allied firms, the Army Quartermaster Corps or other organizations, and all of them attend with the businesslike purpose of obtaining the greatest possible training in the shortest possible time, the institute must pack into its 16 weeks' course as much training as the student at an ordinary educational institution would obtain in a year. Though there is a waiting list, each of the two classes a year is limited to 48, so that students may have the henceit

of "personalized" instruction. The class of 48 is divided into groups of 16 and this division is carefully planned on that men strong on science and theory will be grouped with men strong on practical baking, and in other respects so that students can be mutually helpful.

The well-rounded course is planned to give the fundamental scientific as well as the practical aspects of baking. While it is primarily a production course, merchandising and management fundamentals aid those who already have or may be assigned to responsible sales or management positions when they enter or return to the industry.

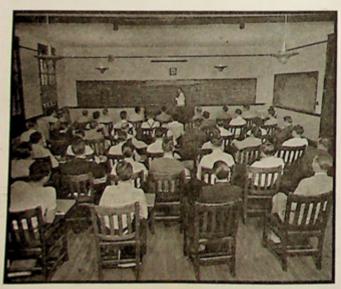

The Louis Livingston Library of Baking, founded by Milton and Julian M. Livingston in memory of their father, is the best and most complete in the world, and is used by students throughout the course.

Since the institute was founded in 1919 more than 1,200 graduates in the United States and 15 foreign countries have had the advantage of A.I.B. training. The tuition fee for the 16 weeks' course

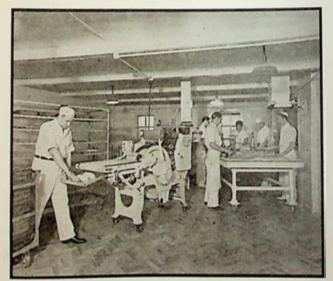

The tuition fee for the 16 weeks' course is \$350, and this, plus the annual continutions of the American Bakers Association and the aid of allied firms which contribute funds and materials and consign equipment, enables the institute to operate as a nonprofit institution.

The institute school is under the leadership of William Walmsley, principal, assisted by Dr. William H. Catheart, Edward Killen, Steve Luber, Ben Norton and William Prouty as instructors. L. J. Schumaker is president of the institute, Tom Smith secretary, F. L. Greenhill controller and librarian, Dr. William H. Catheart director of laboratories, Richard E. Ryberg research assistant, Marguerite Schoener assistant librarian and Celia Block school registrar.

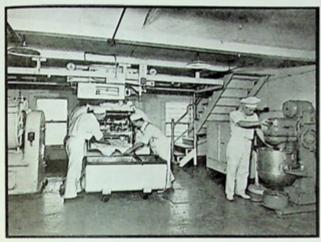

The policies and program of the institute school are reviewed by the practical operators composing the school committee of the institute's hoard of directors. Members of the committee are L. E. Caster, Keig-Stevens Baking Co., chairman; H. S. Mitchell, Swift & Co; E. B. Nicolait, Anheuser-Busch, Inc; Grover C. Patton, Purity Baking Co., Inc., and L. J. Schumaker, president of the American Institute of Baking.

Bad Year Ahead Predicted for Winter Wheat Growers

Dodge Crry, Kansas,-Winter wheat in the Southwest is off to the poorest start in 22 years.

It would probably be more accurate to say that not since the Mennonites in-troduced the hard winter wheat has the Nov. I outlook been so unpromising. October was unseasonably warm with more than normal wind and practically no rain. There are a few moist areas and wet streaks, but the total area is badly off and wheat growers have been hesitating about sowing wheat. Some losses are reported due to the wire worm, which now should be burrowing deeper and letting the wheat alone.

It is not only the dry weather but the condition of the fields that is alarming. A dry July, August and September means that no rotting vegetation has been added to the soil and now the slightest wind sets it in motion. What can be done about it is a most serious question.

The dry period of the year is at hand. Little moisture can be expected until February or March, if normals are to be taken into account. Unless much better than normal weather ensues the crop can already be put down as not better than a half crop over the four hard winter wheat states

Farmers, however, believe that nature compensates for her deficiencies. Raincompensates for her deficiencies. Rainfall since March has been markedly subnormal It should take a turn soon, and there have been years when there were heavy snows in December and January that could happen again. If rains and snows should come, there could be a lot of wheat, but that is just one chance in a hundred. It looks like a bad year shead for the wheat men .- C. C. Isely.

FCIC STORES RESERVE WHEAT IN 68 CITIES

WASHINGTON, D. C .- The Federal Crop Insurance Corp. has announced that up to Oct 20 it had 10,458,501 bus of wheat in storage to cover premiums paid by wheat growers who have insured their 1940 crops against all unavoidable hazards. This reserve, which represents premium payments from nearly winter wheat growers, is stored in 68 cities in 16 states.

Wheat for the corporation's insurance reserve is acquired through its branch offices at Chicago, Ill., Kansas City, Mo., Minneapolis, Minn., and Spokane, Wash. Of the total bushels in storage the Chicago office has handled 1,110,000, Kansas City 5,911,491, Minneapolis 3,281,652, and Spokane 152,358.

It is the policy of the corporation to store its reserves as near as possible to wheat acreages on which "all-risk" insurance premiums have been paid.

WESSON OIL COMPANY REPORTS LOSS

NEW YORK, N. Y .- The Wesson Oil & Snowdrift Sales Co., Inc., and its subsidiaries, for the fiscal year ended Sept.

2, reported net loss of \$524,974, after depreciation, amortization, interest, federal and state income taxes and other charges. The preceding fiscal year a net profit of \$3,066,672 was shown. President A. D. Geologan said in a letter to stockholders that the decline in cottonseed oil prices had caused the first loss in the company's history, but that the new fiscal year was starting with company operations on a profitable basis. During the past six weeks prices have stiffened and the volume of business improved.

DESPITE DROUTH SOME WHEAT NEAR NORMAL

Edge Taken Off Earlier Fear That Winter Wheat Crop Would Bo

KANSAS CITY, Mo .- Although the fall drouth which has plagued the Southwest this year is still unrelieved, enough good reports about wheat that is making almost normal progress in the face dry topsoil are coming in to take the edge off the growing alarm that spread through the grain and milling trades the last few weeks.

Wheat obviously is too short to make

fall pasturage, and too thin to give promise of proper stooling, but it is none the less coming through in many heavy wheat raising sections in satisfactory manner. With no rain from now until freeze-up, grain men and farmers would expect a very light crop next year, regardless of spring moisture, but in the face of amazing winter wheat come-backs of previous years no one as yet can count the crop out.

Oklahoma wheat fields in the central

sections which ordinarily at this time of the year are lush green have only a faint green color, but enough to give hope that the plants will survive the winter. Kansas wheat throughout central and eastern sections is struggling through, but faces deficient subsoil moisture if rains do not come soon. Western sections of the Southwest are in bad condition

Subsoil moisture averages so light that long range crop prognosticators can do nothing but set the prospective yield very low, but the moisture reserve still can partially be supplied if copious rains should come soon.

The following is the Weather Bureau's summary of conditions over the country:

Another week of extremely dry weather, augmented by abnormally high temperatures, has intensified drouth conditions in most sections of the country. The drouth is unusually widespread, extending during the last few weeks into the southeastern states.

At the present time surface soil moisture is fairly favorable in Michigan, most Atlantic Coast sections north of the Potomac Valley, and in Florida. Also, conditions have not become acute as yet in Alabama, Texas and a few other local areas, but otherwise there is urgent need of moisture everywhere from the Rocky Mountains to the Atlantic Coast. Some interior sections report less than one inch of rainfall during the last nine weeks.

In the great basin of the West, especially Utah, conditions are favorable, while recent moisture has been helpful in the north Pacific coastal areas. Farm work made good progress, except it is too dry for plowing and fall seeding over large sections. In northern states there has been no material frost damage this autumn, as staple crops had matured before frost.

> BREAD IS THE STAFF OF LIFE DIONNE BREAD TECHNICIAN

Bakers Research Bureau, division of Bud Fox Enterprises, Inc., 250 Park Avenue, New York City, announces the appointment of Dr. Ijeau Fried as technical director. This organization is li-

ARGENTINE CROP CABLE

BUENOS AIRES, ARGENTINA.—The week opened wet which is unfavorable. There were general rains last week, heavy in some parts. Rainfall since the beginning of the year averages 61/2 to 71/2 inches over normal. Clear, warm weather during the next three weeks is desirable over most of the grain belt. Grains north of Rosario need no more rain this season.

Cutting of wheat in the far north will begin in a fortnight. Northern yields will he less than expected earlier owing to damage from frosts early in the season and exceptionally heavy rains recently which have caused considerable "lodging." In the center and south, prospects are good, although reduced on account of excess moisture. Insect damage to date is probably below normal.

Those who were estimating the crop at 270,000,000 bus two weeks ago have reduced their figures to 250,000,000 bus. Some think the crop is about 210,000,000

censed by the Dionne Quintuplet Guardianship to furnish advertising campaigns featuring Dionne Quintuplet Bread to independent bakers. The bread is made with a special ingredient and formula and it will be Dr. Fried's province to super-vise the handling of all scientific research and technical matters pertaining thereto.

DREAD IN THE STAFF OF LIFE OKLAHOMA BAKERS ORGANIZE

ENID, OKLA-More than 30 bakers from northwestern Oklahoma attended a district meeting at the Hotel Young-blood here presided over by Ferd Den-ner, Enid, district chairman of the Oklahoma State Bakers Association.

Delegates expressed a decision to revive the district organization and set Dec 5 as the date for a re-organization meeting and banquet here. At that time, they will elect officers and formulate a report to the state hoard.

RAIN, SNOW IN PACIFIC NORTHWEST

PORTLAND, OREGON.-Rain and snow have visited the wheat growing sections of the Pacific Northwest, providing relief to growers. Seeding had been widespread with only a slight amount of moisture in the soil. Seeding operations have been progressing and some of the earlier sown wheat is coming above the ground.

-DREAD IS THE STAFF OF LIFE-

TOLEDO WHEAT LOOKS EXCELLENT

Toleno, Onto.-Growing wheat in this area has an excellent appearance following a recent heavy rain. The plant is very green, with good top growth and healthy, thick and even stems, indicating good quality throughout the section. No estimate on seeded acreage has been made.

DROUTH IN MIDDLE SOUTH BROKES

Louisville, Ky.-Excellent rains during the week, representing rain badly needed following a long period of dry weather, should be beneficial to fall sown soft winter wheat seed, making for better general stock and agricultural conditions.

NO CUTWORM DAMAGE EXPECTED

WINNIPEG, MAN.-The pale western cutworm, which has caused extensive damage to crops in Alberta each year since 1923, is not expected to severely infest any part of the province this coming year, according to H. L. Seamans, Dominion Entomological Laboratory.

NEW ENGLAND BAKERS PLAN FEATURES FOR CONVENTION

The convention committee planning the annual fall event for the New England Bakers Association has several innovations lined up. One of these will be the selection of New England's "Miss Energy." The convention will be held this year on Dec. 10-12, at the Hotel Statler, Boston. The committee consists of William F. Goodale, Berwick Cake Co., as general chairman, with entertainment in charge of Philip A. Eaton, Washburn Crosby Co. eastern division of General Mills, Inc., publicity in charge of Guy Maynard, Standard Brands, Inc., and the program in charge of R. Mayo Crawford, American Machine & Foundry Co., New Haven. Three meetings are scheduled for Monday, one in the morning, one at luncheon, and two in the evening, one of which will be E. C. Johnson's Round Table, and the other for retail bakery saleswomen. It will be at the last-named meeting that Miss Energy will be selected, some one of the sales girls present. Meetings are also slated for Tuesday morning and afternoon, with the annual banquet that evening.

WHEAT IN SHEAF FOR GOTHAM CHILDREN

At the close of the National Convention of the American Bakers Association, President L. J. Schumaker presented for exhibition purposes lifty sheaves of specially grown Tenmarq wheat from the plains of Kansas to the public school children of New York, many of whom have never seen wheat in the sheaf and cannot identify it. Mr. Schumaker is shown handing a sheaf to Anita Arnold and other students of the Food Trades Vocational High School, who are studying baking.

CANADIAN FARMERS BEGIN DIGGING IN FOR WINTER

WINNIEG, MAN.—Farmers in western Canada are digging in for the winter. All field operations were brought to an abrupt halt last week as snow swept across the prairies and temperatures dropped several degrees below zero at numerous points. Red Deer, Alta, recorded a reading of 14° below zero. A little threshing remains to be done in a portion of north-central Alberta, but when this will be completed is now difficult to determine.

The cold weather materially slowed up the movement of wheat and coarse grains from farms. However, to date deliveries to country points have been execedingly heavy and for the period from Aug. 1 to Oct. 27, inclusive, wheat deliveries alone totaled 310,000,000 bus as compared with 222,000,000 for the same period last year. Based on the Dominion government estimate and allowing for seed and feed requirements, approximately 77% of the deliverable western wheat crop has been moved from farins. Despite this heavy movement, however, reports are still coming in of wheat and coarse grains piled on the ground at a few points due to the lack of storage space. Elevator companies and farmers are constructing temporary bins to take care of this overflow.

The heavy grain movement continues to tax transportation facilities and the embargo placed on the movement of wheat from prairie points to the Canadian lakehead by the two Canadian transcontinental railways now applies to coarse grains. All country and eastern terminal elevators are full and until space is made available in eastern Canada by the movement of grain overseas, very little wheat or coarse grains is likely to move castward from the three prairie provinces. To relieve the congestion at country elevators the Canadian wheat board last week issued instructions to the trade to ship all Board wheat on No. 1 hard, No. 1 northern, No. 2 northern, and Nos. 1 and 2 garnet without delay to Vancouver from all stations having a 6c per cwt or higher freight differential in favor of the Pacific Coast

Canada's wheat visible total us at Oct. 20, stood at a new all-time record high of 336,000,000 bus and tentative figures suggest a further increase for the week just concluded. Approximately one third of the total visible is in store at western country elevators.

Western Canada's 1939 wheat crop is placed at 465,644,200 hus, including 10,-361,000 hus of durum wheat, according to a Northwest Grain Dealers' Association estimate. This is more than 23,-00,000 hus larger than the Deminion government's preliminary estimate.

MILWAUKEE CAKE DEMONSTRATION

MILWAUKEE, Wis — Several hundred Wisconsin bakers and their employees attended a "Tortes and Cakes" demonstration by Cleve Carney at the Ph. Orth Co. showrooms here recently. Following the demonstration and lecture, guests were presented with formula sheets for numerous baked goods, the baking of which was described by Mr. Carney. Refreshments were served.

PARKING SPACE BRINGS NEW TRADE TO INDIANA BAKER

Indianapolis, Ind.—The first "Drive-In" bakery east of the Mississippi River has been opened in Indianapolis by George O. Brunson. It has facilities for parking 25 cars.

Mr. Brunson operated a bakery two blocks north of the present location for six years, but had no purking facilities.

He gradually lost much of his trade because there was no place for motorists to leave their cars while shopping. The new bakery has doubled his trade.

A special service offered by Mr. Brunson is what is known as a hot baked goods period from 5 p.m. until midnight each day, including Sunday. All bakery products are wrapped in celloplane and machine sealed. A complete line of baked goods and tasty-flake doughnuts that can be closely compared to the product of the housewife are featured daily.

Mr. Brunson enjoys a fairly good wholesale husiness that requires the services of three trucks. He personally supervises his bakeshop and is assisted by several master bakers.

FOOD INDUSTRY LEADERS TO HONOR RESEARCHERS

Leaders in the food industry and alhed lines are among the members of the National Pioneers Committee which has been appointed by Howard Coonley, chairman of the Walworth Co. and president of the National Association of Manufacturers, to sponsor a search for outstanding inventors and research workers who will be honored in connection with the observance of the 150th anniversary of the American patent system.

Among the members of the committee of more than 80 leading industrialists are: C. M. Chester, chairman of the board, General Foods Corp., New York; Clarence Francis, president, General Foods Corp., New York; R. A. Hayward, president, Kalumazoo Vegetable Parchment Co., Kalamazoo, Mich., and Joseph Wilshire, chairman of the board, Standard Brands, Inc., New York, and F. Goodwin Smith, president, Hartford-Empire Co., Hartford, Conn.

Manufacturers, members of trade associations and professional engineering and scientific societies have been invited to nominate inventors and research workers for modern pioneer awards. A committee of eminent scientists, headed by Dr. Karl T. Compton, president of the Massachusetts Institute of Technology, will judge the nominees on the basis of the contributions of their inventions and discoveries to the creation of new jobs, new industries and new goods and services which have raised the American standard of living.

SURVEY OF DEPRECIATION RATES FOR BAKERIES READY

Bulletin 121 of the American Society of Bakery Engineers is a report by the standardization committee headed by W. W. Reece, W. E. Long Co., Chicago, on standards for depreciation rate of bakery building and equipment. The standardization committee has studied this problem over a period of four years and has now issued figures covering the major pieces of equipment in the bakery showing its effective life in years and the per cent yearly depreciation, based on the experience of the committee. Copy of this two-page bulletin may be procured on request to the secretary, Victor E. Marx, 1511 Birchwood Ave., Chicago, if a 3e stamped addressed envelope is enclosed.

BOWLING GIVEN "OFFICIAL" START

MILWAUKEE, Wis. — Sixteen five-man teams have been entered in the Neighborhood Bakers' Bowling League, with J. P. Woolsey, Heileman Baking Co., Madison, Wis., recently elected president of the Wisconsin Bakers Association, bowling the first ball to inaugurate the season. Other state officials present at the inaugural roll were A. Walton Lane, Bennison & Lane, Janesville, vice president; Grant C. Van Ness, treasurer, and Fred Laufenburg, secretary.

FIRST AMERICAN MILLSTONES

Declared to be the first millstones used for grinding grain in America, these ancient relies, once owned and operated by Peter Minuit, who bought Manhattan from the Indians for \$24, were discovered in the basement of the Collegiate Church of St. Nicholas at 48th Street and 5th Avenue, New York City. They were inspected, during the recent annual convention of the American Bakers Association, by Herman Steen (left), vice president of the Millers National Federation: L. J. Schumaker (next), president of the American Bakers Association, and Dr. James A. Tobey (right), director of the department of nutrition of the American Institute of Baking. With them is the rector of the Church of St. Nicholas, Dr. Joseph R. Sizeo.

Increase in Danubian Wheat Exports Seen as War Possibility

Washington, D. C.—Because of the abnormal economic, military and publical situation in Europe, it is believed that the wheat surplus producing countries of the Danube Basin may find themselves in a position to export as high as 100,000,000 bus of wheat during the 1939-10 exporting season, the American Embassy in London reported recently to the Office of Foreign Agricultural Relations.

The 1939-40 crop in the Danube Basin is placed unofficially at 128,000,000 bus by the report. This compares with 466,000,000 bus produced in 1935-39 and with 361,000,000 bus produced in 1937-38. The average Danubian crop for the five-year period ending with 1936-37 was 302,000,000 bus.

At the beginning of the 1939-10 season the visible supply of old crop wheat still available for export from the Danube Basin amounted to around 40,000,000 bus. The new crop (1939-10) wheat export surplus has been estimated unofficially at 60,000,000 bus. This would indicate a total exportable supply of approximately 100,000,000 bus for the 1939-40 season.

However, that surplus may be reduced somewhat by increased consumption and by the establishment and maintenance of reserve stocks. The net exports of the Danuhe Basin in 1938-39 amounted to \$1,000,000 bus, compared with 54,000,000 bus in 1937-38. In recent years a large part of the Danuhian wheat surplus has been exported to Germany, Italy and Switzerland under special trade and price agreements.

In former years the actual wheat exports from the Danube Basin often fell far short of the potential surplus. This was due largely to the inability of the Danube Basin countries to meet foreign market requirements on a competitive price and quality basis.

In present circumstances, however, such factors as relative prices and qual-

ities are no longer as potent as before. It is believed that Germany and Italy may make special efforts to expand their purchases of Danube Basin wheat. Moreover, most other European defleit producing countries may find it expedient in 1939-40, because of war conditions, to obtain a larger share of their wheat requirements from nearby European sources.

With the outbreak of war, wheat trade in all of the belligerent countries of Europe passed under rigid government Even in neutral countries the wheat trade has become so involved in shipping problems and general govern-ment policy that it is only nominally in private hands. Governments may arbitrarily increase wheat stocks by importing without any relation to normal requirements. Moreover, norm d requirements may be affected by orders changing milling practices, substituting other grains, and even by rationing of consumption. Former sources of supply may be ignored and wheat obtained from new sources as shipping conditions, trade alliances and political expediency may

STUDINIS VISIT BAKESHOPS

An integral part of the training of the students in the baking class at the Dunwoody Institute, Minneapolls, is the study of hop practices in commercial shops. To get this, the students are taken at regular intervals to various types of bakeries. During October, they visited the Purity Baking Co.'s plant in St. Paul, where bread, sweet rolls and cake is produced on a large scale. Afterward, they stopped at Bakemasters, owned and managed by Lloyd Colby. This is a multiple unit type, doing the baking for several retail outlets. Another interesting trip made by the students was to the American Crystal Sugar Cal's plant at Chaska, Minn, where the manufacture of beet sugar was witnessed.

Today & Yesterday

A BAKER PLAYS GOLF

I went out to play a game of Cow Pasture Pool, The bright sun was shining, but the

weather was cool; There was strength in my arms and

strength in my legs, In one pocket new balls, in another

new pegs.

I cracked down on the ball, I thought it was nice.

But lo and behold! 'twas only a slice, It rolled and rolled and rolled to the

And the lie that I had, believe me, was tough.

But I bravely approached and hit it a rap, To the green, I thought; but, no, to

the trap:

I aimed at it carefully and hit it so true, But it lay in a hole made by some

duffer's shoe.

So. I made a six instead of a four. And that put a crimp in my chances to score;

Don't let that worry you, maybe

can do Very much better on Number two.

But why lengthen this very, very sad story,

For a poor golfer seldom ends up in He hooks and he slices, the best he

can do

Is stagger around until he is through. After paying all losses there remains

but a dime, Two nickels to play the machine for

a time; The odds come up good-My ain't

it fun When it rolls in the pocket for thirty to one?

THE MACARONI BOOMLET

The macaroni manufacturing industry of this country, like most other lines of business, is enjoying a little boomlet that should help to pull many operators out of the red this year. Most plants are running overtime to fill unexpected orders and executives are so busy filling the increased demand that they have little time for anything else. The only matter that seems to worry them at present is the question, "Is this but a flash or has it the permanency that means the realization of the prosperity for which all have been looking for years?"

After many lean years, this little boomlet in business and particularly in the

macaroni-noodle trade is most welcome. It places many manufacturers in a position to recuperate some of the heavy tion to recuperate some of the neavy losses sustained year in and year out since Depression No. I engulfed them in 1929 and from which they were slowly emerging only to be endangered by De-pression No. 2 that threatened the entire collapse of business. True, occasional and seasonal spurts in business encouraged many to hold on in the hope that the improvement now promised would

Many are inclined to believe that the more than ordinary demand may be due to foolish food hoarding about which so much has been said and very little done. But, irrespective of the reason for it, change from hand methods to machine change from and increases to machine methods and from wood to metal. This trend is aptly illustrated by the history of the wheat drill, which was invented by Jethro Tull in England about 1730. In his book, "The Setting of Corne," he tells first how a "silly wench," employed

sowing carrots and radishes, by accident dropped grains of wheat into some of the holes. Because these separate clumps of wheat showed such a remarkable growth, men thereafter began to plant in rows in order to give the roots more room.

Mr. Tull's drill sowed three rows at a time. About a century passed before the drill came into general use.

Today, several disc harrows, strung to-

gether, can be pulled by one tractor to

Asked to explain the reasons for his own relative indifference in contrast to the corn husking flame which was sweeping the whole Douglas County community, Mr. Goodrich unbent and admitted that it dated from Halloween nearest his twelfth birthday. On the preceding prankish festival, he continued, he and his brother had carried their prowlings and tippings of things over further than their father had approved, so that the next year he forbade them to leave the house after supper. In the interest of accuracy, we continue the story in para-phrase of Mr. Goodrich's own narrative:

"That worried us only until the house was quiet, when my brother and I went out over the kitchen roof, down over the shed and away, by appointment, to meet the rest of the gang in the shadows near by where lived the chairman of the board of selectmen of the school-the bird we did not like. He ran the town milk route and we knew, of course, where he kept his wagon. So we took the wagon apart and then we took all of the pieces and secreted them here and there about town. The wheels we saved on account that we had a different plan for them. That plan was to put each of them on top of a telephone pole on the road leading south of town, spacing them on poles about a mile apart. Worrying wagon wheels to the tops of telephone poles is no slight task, but we did it so that the job was completed just before dawn.

"Then my brother and I eased our-selves up over the shed, across the kitch-en roof and I just had got my leg over the window sill of our room when there was Paw lighting the oil lamp and bidding us welcome home. He first said he did not know his boys had so much enterprise and energy but he was glad to know it and now that he did know it and it was right around sun-up anyway, we might as well start out to do the chores and after that we could do a little corn husking.

"And when Paw said 'a little corn husking' he did not mean just to practice it for an hour or so. What he meant was to start in right away and keep going every day for all of that week. Besides, he rode herd on the results, too, and made us turn in a good load every day, quitting when it got too dark for anything but finishing up the chores.

"These champions," said Mr. Goodrich, "are no doubt pretty good shuckers and worth seeing, but for a good many years when I see corn husking going on I just simply don't feel so well. As like as not I'll go to the show, but I'd about as soon stay at the office and try to get rid of a little flour on a dull market."

2 2 2

Speak no slander, no-nor listen to it.—Tennyson.

the results are enjoyable to the macaroni men who hope to find themselves out of the "red" this year-end. The general thinking is that the manu-facturers should keep their feet on the

ground, that they should take improved conditions calmly, manufacture the hest quality products possible and sell them reasonably and profitably. It would be foolhardy to get out of the business "all that the traffic will bear" as some are inclined to do, because there will be a day of reckoning that all should heed.

It should be remembered that Italy, the world's largest producer of macaroni products, is not at war, yet. It would like nothing better than to regain the lucrative macaroni market in this country, lost during the World War. Italian manufacturers and those in other macaroni producing countries, will be eager to win this market if the domestic manufacturers make either of two mistakesunduly increase prices or unfairly reduce qualities for longer profits .- Macaroni Journal.

INSTRUMENT OF REVOLUTION

The story of the revolution in agriculture, as in industry, is the story of

cover a vast area which one farmer alone could not possibly have cultivated in former times. With a large modern power drill which seeds as many as 57 rows at one time, one man can plant as much as 100 acres in one day. Today an are of wheat may be grown, harvested and threshed with 2 hours and 24 minutes of labor. One hundred years ago a total of 61 hours and 15 minutes was required. The great improvement in machinery is the chief reason why man today has plenty of wheat for his bread .- Food

Kindness is the oil that takes the friction out of life .- J. L. Newland.

2 2 2

WHEN BOYS WERE BOYS

Fred E. Goodrich, vice president of the Bowersock Mills & Power Co., Lawrence, Kansas, stated in an authorized interview with our special field correspondent, as of Oct. 26, that while he probably would attend the National Cornhusking Contest, being held near Lawrence this week, he felt that his corn shucking interest would be at the lowest ebb of any of the 150,000 spectators expected to witness the event.

CONJECTURE

W E recently have discussed with grain merchants V and others more practically experienced than ourselves the extent of the pressure on the general wheat price level of the large quantities of flour constantly sold at prices less than millers' costs of ma-terial and manufacture. Such discussions are, of course, in large degree speculative and any conclusions reached little more than conjectural. Yet, there must be such a pressure and, for the causes here suggested, it may have a much more important effect than is generally believed.

We know that under the wholly free market conditions in the years before the growth of nationalistic controls in many places in the world and of our own futile efforts to defend wheat prices by pools and such set-ups as the Federal Farm Board, the influence of American price on the world price was very great and often dominating. The world watched Chicago, and the Chicago market was supported by the specia lative interest of the most buoyant and optimistic thinking and investing-for-profit people in the world. But when increasing restraints on speculation and interferences by government reduced speculation, Chieago price influence gradually declined. Liverpool took over as the world's measure of the price of wheat, and what long had been a characteristically sellers' market became and has continued to he a buyers' market. Obviously all of this would not have happened but for recurring over-production many places in the world and a gradually increasing surplus bur-den,—considering surplus as wheat that is not used, rather than as wheat for which there is no use because of misdirected world economics.

With the years through which this ill situation continued and increased, we have come to our present state of dwelling on what, so far as price is concerned, may be described as a wheat island. Not only are we quite independent of world price influences but that independence is emphasized by the fact that our government stands at all times ready with unlimited funds to protect the established price isolation through direct subsidies. Supplementing our successful effort to maintain our position on an isolated price peak, we have created a surrounding of price foothills through loans, direct payments to growers and other devices, the economic merits of which have nothing to do with these speculations.

We have, also, the fundamentals of a certain degree of price stability. On the one hand we have a known and more than ample supply of wheat as related to our current needs and safety reserve, with virtually no element of uncertainty save the action of government in releasing or indefinitely holding the wheat to which it has virtual title by reason of grower loans. On the other hand, we have a known requirement, not only fixed within the limits of a few millions of bushels from year to year but also from month to month, the rate of consumption of wheat both as to mill grind and actual distribution among consumers being less variable through the year than in the case of virtually any other staple.

Supplementing these elements contributing to thearetical stability of price, we have nowadays a relatively small speculative interest in wheat. Almost nothing other than weather-crop conditions now affects the price and, even among those, situations which formerly would have created wide price swings now move the market hesitatingly a cent or two. Neither "bull" markets nor "bear" recessions ever gain much of a following; and only recently we witnessed the astonishing spectacle of the whole world shaken by the outbreak of a probably unprecedented war with the wheat market stirred to price activity for searcely more than a week and then only to settle back into its former lethargy.

Thus, we come back to our first wholly speculative question: how much is this relatively flat wheat price line depressed by the downward pull of pressure flour buying which forces millers, in their turn, to put every possible ounce of their own buying pressure on the market price of wheat? We ourselves, along with everyone else in the industry, repeatedly have

seen very large sales of flour to chain bakers-which normally should strengthen the wheat price-so echoed in release of hedges or "cagey" covering in cash or futures as to be, save for a small momentary flurry, more of a bearish than a bullish influence on price.

We saw this, also, last week, when the government made large purchases of flour at a level which squeezed the last possible fraction of normal commercial profit out of the transaction. It is not in point that a large number of millers found it desirable to bid on this business and that, for reasons sufficient to themselves, a few secured it and many others failed to do so. The interesting thing is that, considered as an influence on wheat prices, the sale was depressing. In one instance, an interior mill buyer, covering his sales with each wheat, had so many owners of elevator stocks bidding on the sale that he broke the current cash premium a good two cents per bushel. Precisely the same competitive struggle, amounting to fear, that enabled the government agency to buy flour at a price below the wheat market level, enabled the miller to cover his sale with wheat at a price substantially below the former basis.

Here was an instance as authentic and convincing as ever shown on a news reel of buying pressure on flour directly reflected in a similar pressure on wheat which resulted in a reduction in cash premiums, while futures meanwhile remained unaffected by a growing crop situation rarely equaled in recent years in its portent of possible disaster. To what degree the price paid for flour by the government may or may not have affected the wheat price level is anybody's guess. We are not even going to file our own.

NO TIME FOR TIMIDITY

T is gratifying to observe that there is no present evidence of lack of determination among all of the elements of the bread industries in opposition to the proposed bread tax,-trickily disguised as the "eertificate wheat plan."

The situation is sharply different from the abject lack of courage in opposition widely current while the processing tax was pending in Congress and even after it was enacted into law. We ourselves very well recall the counsel that came to us from many quarters that we would better serve the interests of millers and bakers if we "toned down" our criticism of the processing tax or "laid off" it entirely. Indeed, we were on occasion rather pointedly told that our opposition was getting these industries "in bad" with the New Deal inasmuch as our comments were construed among political big shots as the voice of these industries. This was, of course, absurd, since we have no commission as the voice of or for anything other than our own quite independent and oftentimes doubtless erroneous views.

In any case, it is a matter of record that these trades and industries took the processing tax scheme lying down because of nothing in the world but timidity lest they antagonize the arbitrary powers then being so rapidly seized and exercised by the administration in its "make America over" program. The result was the imposition of inordinate direct excises on the first needs of all people, bearing most heavily on the poor, a reckless waste of the money so exacted and the ultimate debacle by action of the Supreme Court with evidences of approval everywhere save among the administration economic inventors who had

counted on the tax-handitry millions to provide for more absurd experimentation in "programs

But that timidity is today quite obviously over the dam. Millers have set their course; the widespread grain trade,-in closer touch with grain growers than either members of Congress or the big shot farm lobbyists,-is disposed to join hands; and the baking industry is displaying ample evidence of joining up for hattle rather than, as in the case of the processing tax, joining up to "work things out" and being chiefly concerned about floor stocks taxes and fussing with millers about who would pay which, what and when.

Indications are that Congress will adjourn immediately it completes its job of drawing an imaginary line between courage and national honor and national isolated timidity. This means that there will be no new farm relief tricks to be played with until next year. Meanwhile the administration and the farm leader boys are jockeying for position, somewhat in the interest of agriculture itself but very much more with an eye to the approaching political campaign.

And all of them, high and low, even as high as the all highest, are afraid of nothing so much as new uprisings of tax resentment. All that these affected industries, who will not themselves pay any of the tax, need to do is to emphasize with every means at their command that this trick "certificate plan" proposes a direct and inordinate tax on the people's food, that its burden will be greatest upon the poor, that it is inequitable and unfair and that use of the money so collected on more foolish and futile farm "programs" will accomplish nothing for the long time benefit of agriculture Itself.

"BLAZING THE WAY WEST"

TATE are proud to claim as a member of the staff of this publication the author of so delightful an historical narrative as "Blazing the Way West" from the pen of Mr. Bliss Isely, just published in a beautiful volume by Scribner's. While Mr. Isely's connection with THE NORTHWESTERN MILLER is only that of news correspondent at Wichita, Kansas, and contributor of occasional but always interesting special articles, we confess to the common weakness of liking to know the great and the near great and all of those others who modestly do a workmanlike job.

Mr. Isely's story is of French exploration, French rule and the continuing French influence on the North American continent. Beginning with the earliest visit to Belle Isle in the St. Lawrence, he tells, with much apparently new material and enlivening incident, of the progress of French exploration up the St. Lawrence, across the Great Lakes and into the Northwest. All of the well-known names and characters of those great days of penetration of the wilderness, Cartier, Champlain, Frontenac, LaSalle, Hennepin and the rest, appear in the straightforward narrative.

There follows, of course, the conquest of the Mississippi River, the stories of New Orleans and Mobile, of the Indian wars and, as the years march, of the French return up the Mississippi, the beginnings of St. Louis, with the pioneer undertakings of LaClede and the Chouteaus and, as the narrative nears its close, the brave adventures of Lewis and Clark to the headwaters of the Missouri and across the divide to the great valley of the Columbia. Those who have fairly generous stock of schoolday recollections of this great epic of discovery and settlement will be delighted with these pages, while those less familiar with the tale will be absorbed in Mr. Isely's telling.

Kansas-born. Mr. Isely has spent his whole life in the West and contributed much to its literature, chiefly as feature writer for many years for the St. Louis Globe-Democrat and the Kansas City Star. His brother, Charles C. Isely, of Dodge City, Kansas, has, incidentally, long been another valued contributor to these pages, and we hope sometime to present something from the pen of Mrs. Bliss Isely, whose penname is Kunigunde Duncan, and who just now is in Wishington making one of her recent books of poetas into phonograph records for the blind.

New Zealand Embargo Shuts Out Wheat and Flour Imports

Commercial Intelligence Journal, a publication of the Dominion government, ing with the wheat and flour trade of New Zealand, the Canadian trade commissioner at Auckland states that New Zealand, with a population of 1.500,000 people, requires about 9.000,000 bus of wheat per year. Some 7,000,000 bus are ground to produce 150,000 tons of flour. Feed absorbs 1,500,000 hus and seed requires 500,000 bus. New Zealand is an importer of wheat, although in two years out of the past 10 production exceeded consumption and exports of limited quan-tities were made. In 1938 total imports were 3.444,869 bus as against 1,582,951 in 1917. Australia is the chief supplier and 1938 purchases from that country taled 3,373,556, while 71,314 bus were imported from Canada. These are the only two countries supplying wheat to New Zealand. Farmers are given every en-couragement to produce wheat and this policy has been in effect for many years

Prior to 1936 Canadian millers sold substantial quantities of top grade bak-ers flour in New Zealand. Imports from Canada and the United States averaged 10,000 tons annually. In the year named, however, the New Zealand government prohibited the importation of flour and took control of wheat imports. All flour consumed in New Zealand is now milled in this Dominion. There are 45 flour mills in operation, ranging in capacity

from 500 to 30,000 tons per year and having a total annual production of 150,000 tons. The flour mills are all privately owned, mostly by small limited liability companies.

The embargo on the importation of wheat and flour leaves the whole of the domestic market to the New Zealand wheat grower and flour miller. When local production falls short of demand the government imports wheat and dis-tributes it among the mills. The mills have a sales quota based on the average of the volume of flour milled in 1933, 1931 and 1935. Both the buying of wheat for the miller and selling of flour to the baker is done through the government organization. The price the miller pays for his wheat and the price he gets for his flour is fixed, so his only chance of increasing profits is to increase his effi-ciency. Profits in the milling business are not large but most mills are able to make a fair return on their investment and pay dividends.

-DREAD IS THE STAFF OF LIFT. BARON NEUMAN IN CANADA

WINNIPEG, MAN .- Baron Charles Neuman, millionaire Rumanian industrialist, owner of flour mills, cotton mills and distilleries as well as thousands of acres of land, has taken shares in the Manitoba Sugar Co. Mr. Neuman was in Winnipeg last week on an inspection tour of industrial and agricultural activities.

GOOD SEPTEMBER BUSINESS CANADIAN FLOUR EXPORTS REPORTED BY MILL HEAD SHOW LARGE INCREASES

TORONTO, ONT .- At the annual meeting of Lake of the Woods Milling Co., Ltd., Montreal, held here on Oct. 25, Frank S. Meighen, president of the company, informed shareholders that with preferred dividend arrears out of the way directors are prepared to give early attention to the question of dividend action on the common stock. Mr. Meighen said that September business had turned in a very good profit. The management, he added, did not expect anything in the nature of a war boom, but the present year was expected to be good, although prospects over a period are difficult to determine. The company's position is satisfactory. Inter-City Baking Co., Ltd., is contributing better than in the past to the parent company. Alphonse Raymond was added to the board of directors.

BREAD IS THE STAFF OF LIFE RICHARDSON PROBATE BEGUN

WINNIPEG, MAN .- Application has been made to the surrogate court of the eastern judicial district for probate of the will of James A. Richardson, prominent Canadian and internationally known grain man, who died in Winnipeg on June 26. His wife, Mrs. James A. Richardson, and G. W. Hutchins, Winnipeg, are the executors of the will. The gross value of the estate is \$3,123,112.87 In addition to the assets shown in the application for probate there was approximately \$1,600,000 of life insurance. The entire estate was left to Mrs. Richardson and the four children.

TORONTO, ONT .- The following table shows flour exports from Canada in September by principal countries of destination with comparison for September, 1939, in harrels:

	1939	1938
United Kingdom	197,741	148,941
British West Indies	71,720	46,184
Newfoundland	65,124	29,087
United States	27,604	5,002
Philippine Islands	11,075	3,512
British Guiana	8,729	5,976
Hongkong	7,198	11,965
Japan	5,010	17
Norway	4,291	15,423
Dutch West Indles	2,520	641
Venezuela	2,401	3,389
Sierra Leone	2,221	1,012
Others	20,919	30,046
	416,553	319,739

Only three markets, namely, Hongkong, Norway and Venezuela, showed reductions in the quantities of Canadian flour imported as compared with September last year. Norway has since made heavy purchases according to reports of mills All other markets listed above substantially increased purchases.

Particulars of imports into the various markets of British West Indies for the seven months of calendar year ending with July last have been compiled by the Canadian National Millers Association, Montreal. Canada is the chief supplier, although a few of the smaller markets have been taking more flour from the United Kingdom than from this country. Trinidad and Jamaica are the more important markets and these take their supplies largely from Canada, although they also buy smaller amounts from Australia and the United Kingdom. A table showing the various markets with quantities of flour imported and sources of simply follows:

January - Jul				M .				
		——F'r		-				
	Canada	U. K.	Australia	U				
Trimdad	142,422	30,357	45,993	1,344				
Br. Gulana .	55,991	59,552	150	650				
Harbados	23,413	27,732	200	1,948				
Jamaica	143,568	32,710	63.815	0.829				
St. Vincent	1,183	3,628	10	1				
Antigua	10,222	242		41				
Grennda	12,112	9,572	793	100				
St. Kitta	9.941	491	655	13				
St. Lucia	9,346	110	35	- 1				
		-						
Totals	416,258	165.143	111.481	13.829				
Pominica	6.021	354						
Montserrat	1.773	100	64	2000				
			100000					

CANADIAN-U. S. AGREEMENT ON TRADE MAY BE CONTINUED.

TORONTO, ONT .- Negotiations for a new trade agreement between Canada and the British West Indies have been interfered with by the outbreak of war, and the present agreement, which expires Dec. W. D. Euler, Canadian minister of trade and commerce, recently stated that the pressure of events prior to and since war began has made it impossible to enter upon negotiations for revision. He said no arrangement had been made so far but there would be no difficulty in extending the agreement if both sides were willing.

BREAD IS THE STAFF OF LIFE-VANCOUVER FLOUR EXPORTS DOWN

VANCOUVER, B. C .- Exports of flour from this port in August were only down slightly from the same month last year, but the total for the first eight months of the calendar year was sharply higher than in the same months of 1938. Shipments in August were 26,895 bbls, of which 25,539 were consigned to the Orient, 82 to Central and South America and 1,356 to "other countries" including the Philippines. Nothing was moved to the United Kingdom. A year ago shipments aggregated 28,084 bbls. For the year to Aug. 31 clearances have been 369,823 bbls, comparing with 198,838 in the same months last year. New Westminster cleared 1,240 bbls in August, all to the Old Country, compared with nil a year ago. Total for the year is listed as 17,850 bbls, against 13,590 last year.

BREAD IS THE STAFF OF LIFE-

CHARLES A DUNNING RETURNS

TORONTO, ONT.-Charles A. Dunning, who was president of Maple Leaf Milling Co., Ltd., Toronto, up to the time of his entry into the Canadian government as minister of finance, is back from England where he went some time ago in search of health. He is now in his usual good form and will be available for public service in any suitable capacity during the war period. He is still a member of the House of Commons, though the portfolio of minister of finance was filled on his own advice at time of his breakdown in health.

FLOUR MARKET IN TRINIDAD

TORONTO, ONT .- The Department of Trade & Commerce, Ottawa, under date of Oct. 25, gave the following information regarding the flour market of Trinidad, B.W.I:

"Canadian high grade bakers flour is still being sold at \$5@5.15 for two bags of 98 lbs, c.i.f. A lower grade of Canadian flour is being sold at \$1.65 but the price for this flour has not been sufficiently below that of the high grade to permit a half cent per pound difference

in the retail sale with the result that the sale of low grade flour has not been ns extensive as might be expected in the absence of English extras. It is also reported that the dark color of the low grade Canadian flour has not been found acceptable on this market. At present the government control wholesale price for Canadian bakers flour is \$6 per bag of 196 lbs. At this price local importing merchants are inclined to replenish their stocks."

FARM ESSAY CONTEST COMPLETED

WINNIPEG, MAN .-- Awards for the A L. Searle \$1,000 Farmers' Essay Competition have been announced, with first prize of \$250 going to George Shepherd, West Plains, Sask., second to H. L. Christie, Innisfail, Alta., and third to Russell G. Brewer, Ashville, Man. The judges were Dr. E. A. Howes, of the University of Alberta, Dr. L. E. Kirk, of the University of Saskatchewan, Dr. P. J. Olson, of the University of Manitoba, and Dr. L. H. Newman, Dominion Cerealist, Ottawa Two hundred essays were received Accepting a recommendation of the judges, A. L. Scarle announces that the competition will be repeated next year.

BREAD IS THE STAFF OF LIFE FEW GRAIN SALES CONFIRMED

VANCOUVER, B. C .- Very few actual sales of export grain have been con firmed due to the fact that few British ships have arrived here and the purchasing board is not taking wheat until the boats are near. The embargo placed by Canadian railways on both wheat and coarse grains from the prairies to the head of the lakes is being reflected in mounting elevator stocks here. Storage now totals close to 7,000,000 bus, an increase of one-third in the past fortnight.

-BREAD IS THE STAFF OF LIFE REJOINS CANADIAN WHEAT BOARD

WINNIELG, MAN .- C. Gordon Smith, director of the Reliance Grain Co., and export manager for that firm, has been appointed assistant chief commissioner of the Canadian Wheat Board. He was export sales manager of the board, under the chairmanship of James R. Murray. from December, 1935, until July, 1937, when he rejoined his company following the disposal of Canada's wheat surplus.

-BREAD IS THE STAFF OF LIFE-RATE DIFFERENTIAL STATED

TORONTO, ONT. The Cereal Import Committee, of London, Eng., which is the government organization in control of imports of flour and other foodstuffs into the United Kingdom, was recently advised that the difference in rail freight to St. John, Halifax, Portland, Boston, etc., is 1s per 280 lbs over Montreal.

-BREAD IS THE STAFF OF LIFE-

II. C. MILNE RETURNS SAFELY

TORONTO, ONT .- A private letter from H. C. Milne, of William Morrison & Son, Ltd., flour importers, Glasgow, who was visiting in Canada and United States when the present war began, says he has completed his return trip to Glasgow safely. He and Mrs. Milne traveled on a United States vessel.

-BREAD IS THE STAFF OF LIFE-

SEED CLEANING UNITS ACTIVE

WINNIPEG, MAN .- Seed cleaning units are operating in many rural municipalities in Saskatchewan according to S. H. Vigor, provincial crops commissioner.

Britons Called to Increase War-Time Production of Food

London, End.—Early in the year the government offered an inducement to farmers and other land owners to plow up their grasslands for food producing purposes by offering them a grant or subsidy of \$10 per plowed acre. At the time many agriculturists pointed out that as no conditions were imposed as to the type of grass to be plowed up, except that it must have been grassland for seven years, it was feared that many farmers would plow up land quite unsuitable for the production of crops. Also, there were many dangers connected with grassland not adapted for cereal culture unless considerable money were spent on drainage.

Now that the country is in the midst of war farmers again are being urged by the government to speed the plow with all their might. Those who took advantage of the government's offer earlier in the year will receive the promised grant of \$10 per nere early in October, but only where the conditions hid down by the Ministry of Agriculture have been fulfilled. No immediate payments will be made on hand recently plowed up, but all the same the farmers are encouraged to increase their food producing acreage, which it is estimated will amount to about 1,500,000 acres.

A similar policy was followed in the last war and proved disastrous for the hay crop, so that large quantities of hay had to be imported from Canada and Argentina. When there is a shortage of cargo space, as in war time, hay is found very unconomic as tonnage, owing to its bulk, and during the 1914-18 war to became both scarce and valuable. It looks as if there will be a repetition of this same experience if care is not taken to preserve a sufficient area of grassland for pasture and hay.

In order to help the farmer plow up the proposed 1,500,000 acres of grassland, and for general plowing, the gov ernment is prepared to loan tractors and other farming implements. The idea is to work on a contract system, under the control of a machinery officer, that each County War Committee is empowered to appoint to organize tractors and other machinery in a particular area. Actually, there are 60,000 tractors in use in Great Britain, but they are not evenly distributed, the greater number being in the eastern counties of England, and it is not considered desirable to adopt a national pooling system. The problem, therefore, had to be considered on a county basis and each county committee will be expected to organize its tractors so as to secure the fullest possible use. government tractors are a reserve for use where local resources are deficient and the charge made for them to farmers and other cultivators will be on the same level as the rates charged in the district by reputable machinery contractors, provided such rates are reasonable.

In order to economize in the use of tractors and other farm implements, it is suggested that the farmers should endeavor to work in groups of five. It is specifically stated that the government tractors will not be loaned to individual farmers to carry out the work themselves, the whole idea being to secure team work. It will be the task of the

County War Committees to organize assistance between one farmer and another. In bad cases of unwillingness the minister of agriculture would be prepared to consider powers of requisition under defense regulations.

Not only are the farmers and large cultivators urged to increase food production but the general public, by growing vegetables and edible roots in their gardens and on allotments. An effort is being made to increase the number of allotments in England and Wales by half a million.

The Minister of Agriculture stated in a recent broadcast that allotment bolders can help—perhaps more than they realize—to feed themselves and others. He estimated that the produce of an average allotment will keep a man, his wife and three children in potatoes alone for nearly two thirds of the year.

An order has been issued whereby local authorities can take possession of (a) unoccupied land—where it can be cultivated—without having to obtain any consents; (b) occupied land, by agreement with the owner and occupier; (c) common land, with the consent of the Minister of Agriculture. Moreover, the Minister has asked the authorities to arrange for expert assistance to be given to allotment holders in the preparation and cultivation of their plots.

There was a splendid response to a similar appeal at the beginning of the last war and the growth of the movement was described by a well-known London editor "as a symptom of the most important revival, the greatest spiritual awakening this country had seen for generations." There is every reason to believe that the response will be even greater this time, as the art and love of gardening has grown so immensely in the period between the two wars.

The Ministry of Agriculture, in its desire to help amateur growers, is issuing a series of booklets under the title "Growmore Bulletins." No. 1, which is now on sale for 3d (6c), is entitled "Food from the Garden." It gives much valuable and helpful information as to soils, cultural operations, usunuring, cropping, suitable crops to grow, amount of seed required, etc. Thus, an interesting and absorbing occupation for spare time is being fostered, and one that stands foremost in southing and calming the nerves, never more necessary than in these days of strain and tension. Therefore the garden or allotment vegetable plot will be of twofold value to the nation.

BRITISH FEED TRADE ASKS FOR ALLOCATION OF WORK

London, Eng.—An emergency meeting of the National Cattle Food Association was held on Sept. 22 in the Merchants' Hall of the Baltie Exchange, over which W. H. Pinnock, of Pinnock Bros., feed dealers and importers, London, presided and at which at least 40 members were present.

Mr. Pinnock stated that the meeting had been called for the purpose of passing a resolution to be forwarded to the Ministry of Food, expressing the dissatisfaction of the feeding-stuffs trade with present arrangements, pointing out the chaotic conditions that have prevailed since the government took over the control of the trade, and to ask that something should be done for the cumployment of all sections of the trade. The resolution put to the meeting was as follows:

"We are seriously concerned with the feedingstuffs (Pravisional Control) order, dated Sept. 18, 1939, issued by the Ministry of Food, and are of the opinion that all those at present engaged in the trade he asked to place before them (the Ministry of Food) a scheme for the purchase and distribution of cattle feedingstuffs, so that everyone in the trade he allocated a reasonable proportion of the renumeration. Furthermore, members of the trade are disturhed at the evident signs that executive powers under the suggested government scheme are being vested in representatives of one section of the trade to the almost complete exclusion of the other interests of the trade, which represent the major part of the trade and of whose capital in the aggregate, adequate use will not be made. In the latter event large numbers of persons, principals and staff, will be deprived of their livelihood."

It was agreed, without further discussion, that this resolution should be sent to the Ministry of Food without delay. A leading member of the trade then put forward a further resolution, namely:

"That those present ask the government to give immediate instructions for the disposal of goods landed abroad or arriving in foreign countries, due consideration being given against such goods going to the enemy and to permit trade between allied and neutral countries to continue under license. It is pointed out that foreign trade in this country is at a standstill and that it is being forced into the hands of foreign countries."

Judging from the criticisms of flour importers, the same chaotic conditions exist in the flour import trade as complained of by the feeding-stuffs trade, and similar resolutions might very appropriately be passed by the National Association of Flour Importers.

FARMERS URGED TO GROW RYE

London, Eng. - A press notice was issued by the Ministry of Information on Sept. 27 wherein farmers were recommended to grow rye, it being stated that its cultivation is simple. It also was pointed out that rye is one of the crops approved by the government as eligible for the £2 (\$10) grant under the plow ing up scheme, which was launched earlier in the year. The notice emphasizes the interesting fact that the chief reason for the decline in cultivation of tye in this country was the increasing popularity of white bread. Its increased growth at the present time is urged because of its value for the manufacture of "crisp-bread" and of its straw for feeding and thatching purposes. It is suggested it should be grown with a small quantity of winter vetches, the straw of which, it is stated, has a high value for feeding cattle.

"In recent years," reads the notice, the area of rye grown in England and Wales has been componatively insignificant (about 16,000 acres in 1939). Formerly it was, next to wheat, the chief grain crop, and in northern European countries it is still by far the most important bread crop."

SHORTAGE OF FLOUR SACKS HAMPERS LONDON MILLERS

London, Eng. London millers are experiencing a temporary shortage of flour sacks and thereby suffering considerable inconvenience. The custom prevails in London for bakers to return to the millers all flour sacks. When the flour is delivered they are charged Is (24c at par) for each 1to-lb sack, which amount is credited to them when the sacks are returned. But it appears that recently the sacks have not been returned and on investigation it was found that many bakers sold them to the enterprising Jewish gentlemen who went around buying them up. The latter, in their turn, cut them up for sandbags—each flour bag making about four sandbags—which have been in great demand for protection of property against air raids—and were resold at a very handsome profit. Hence the temporary shortage of flour sacks.

As a result of this situation, the Cereals Control Board has issued an order increasing the charge to be made for returnable flour hags to 2s 6d (60x) per 1to-lib hag. In view of the heavy demand for sandhags—both for civil and military purposes—it is surprising that there has not been a very much greater increase in the price of jute. A government order recently was placed in Calcutta for 15,000,000 sandhags.

DISTRIBUTION OF IMPORTED FLOUR TO INTERIOR POINTS

Losnos, Exa.—A circular letter was sent out by the London Port Area Committee, Imported Flour Department, on Sept. 28, to flour importers and factors, headed: "Distribution of Imported Flour to Interior Points." An extract from this letter follows:

"When larger quantities of imported flour become available in the territory controlled by the London Port Area Grain Committee, it is intended that sunplies shall be stored in suitable warehouses at distributing centers through out the territory, in addition to the stocks at the usual wharves at London and Southampton. In order to assist in drawing up the necessary plans, importers and factors are asked to inform this office what centers they have been using for country distribution and to give any information they can as regards suitable warehousing accommodation at those points.

For the guidance of the importers and factors a list of the counties in the south and southeast of England, coming under the control of the London Port Area Committee is given.

FLOUR LEVY REDUCED; BREAD PRICE UNCHANGED

Lorners, E.so. The wheat quota payment or flour levy was reduced on Oct. I to 3s 5d per sack of 280 lbs, a cut of 1s from the rate that had prevailed since Sept. 10. In the ordinary way a reduction in the flour levy should mean a reduction in the price of bread, which recently as advanced to 8d per 4 lb loat. However, it is understood that the present bread price schedule is to be abandoned, as it cannot function under present conditions. Therefore, the price of bread will remain unchanged.

Stuffed Straights

FROM THE MANAGING EDITOR'S SIFTER

By Carroll K. Michener =

CALENDAR CRISIS.—The World Calendar Association, which looks for the adoption of its reformed and rationalized world calendar by Dec. 31, 1944, sees in the current Thanksgiving Day upset one of the many reasons for reform. Under its plan there would never be a fifth Thursday in November.

The association thinks another important improvement in the Thanksgiving schedule could be made. Since there is nothing sacred or significant about Thursday in connection with this holiday—it has, in fact, been celebrated on all sorts of days and dates—the association would transfer it to Monday. This could readily be done, it is argued, in the reformed calendar. In fact Monday would become, under this plan, the day upon which nearly all holidays would fall.

In the association's argument for Monday holidays recognition is given to the differences between holidays having a month-date and those whose observances are not so restricted. Holidays like Feb. 12 and 22, July 4, Oct. 12 and Dec. 25 should remain where they fall in the present calendar, it is admitted. But among the important non-dated holidays, not so restricted, Memorial Day, Labor Day, Election Day and Thanksgiving Day, there exists no valid reason, it is propounded, why these could not be celebrated on Monday. Labor Day, already a Monday, has long been widely acclaimed because of this advantage. Similar observance of Memorial Day and Thanksgiving Day would bring the same benefits. Memorial Day is included in this group as the date is one arbitrarily chosen with no apparent historical basis. Placing Election Day on Monday is recommended as an advantage to voters. Campaign speeches and activities could be concluded on Saturday night, and the restful Sunday following would, at least in theory, afford citizens an opportunity to weigh the issues, thereby bettering their chances of picking right at the polls. These detailed advantages for a Monday Thanksgiving are set forth:

- 1. It spaces the holidays within a period of seven weeks more or less evenly throughout November and December. It falls approximately three weeks after Election Day and four weeks before Christmas.
- 2. Being a Monday, it avoids an awkward break in the week which interferes with the smooth flow of business and education.
- "Domestic and social enjoyment" would be enhanced in combining it with

Saturday and Sunday, rather than isolating it between two working days.

The long week-end would allow numbers of families living at distances

members of families living at distances to gather around the festive board.

5. To churches the fourth Monday

 To churches the fourth Monday would be a signal for the ending of Trinity Sundays and the beginning of Advent Sundays which announce the coming Christmas season.

6. It would be the fourth Monday in either the present Gregorian or the proposed World Calendar without any loss of the above mentioned advantages. In connection with a Monday Thanks-

In connection with a Monday Thanksgiving, it has been objected that a feastday on Monday would be an unnecessary
hardship for women since they must prepare for it on the preceding Saturday,
a half holiday. But every housewife is
first of all a woman and it is doubted
whether she would long weigh the necessity of a little planning aforehand against
the benefit to the public or the joy of
having members of her family with her,
no matter from what distances they might
have to come. With a Monday Thanksgiving, families would have ample time
to assemble for the feast.
Let's go!

222

No longer do we convert swords into plowshares. When war ceases the plow must rust lest there be troublesome surplus. When war begins the plow must go to work-its digging no less important than that of the bayonet that scoops a trench. For the warring nation must be fed. Hence, today, in England, the minister of agriculture demands that an additional 1,500,000 acres must be brought under the plow in the coming year, and county executive committees, supported by district committees whose members know the local conditions, are already getting to work to see what farmers can do individually and in co-operation.

2 2 2

Christopher Morley is a fancy literary gent and can't be taken too seriously, but here is what he says ubout baker's bread: "Nothing rouses such contempt in my heart us modern American factory-made bread, wrapped up in wax-paper and already sliced by machinery. You can't even have the fun of cutting through a good stiff crust with a sharp knife. A miscrable, moist, soft, sweetish, spongy, indigenous, exogamous, unnutritious kind of rubbery cellulose. Talk about totalitarianism and dictatorships. When was there ever such a humiliation imposed upon a nation as American artificial bread? They even have to moan about it on the radio to try to sell it. The dreadful thing is there's a whole new generation grown up who hardly ever saw a loaf of real bread and take that terrible pulp for granted. Turn, oh, turn your minds back to a genuine crusty loaf of home-made bread."—Terrible, we calls it!

CEREAL CONSCIOUSNESS.—Manufacturers of cereals are going to be obliged to watch their steps from now on. This is because of a startling new phase of the consumer-consciousness movement. Under the sponsorship of a journal called the American Consumer a food sampling plan recently was tried out on consumer education pupils at Pipkin Junior High School at Springfield, Mo. After their study had been concluded, the pupils summarized what they had learned in this way:

- Useful information was acquired as to the different grains used in breakfast foods.
- 2. A wider acquaintanceship with foods generally was obtained through the project.
- 3. The value of measuring containers and counting servings was learned.
- 4. Simple methods of computing costs per serving were taught.
- 5. It was discovered, through actual comparison, that some prepared foods are as inexpensive per serving as some cereals that require cooking.
- 6. Pupils, in studying wrappers, learned how to judge the value of contents listings and protective wrappings.
- 7. It was found that package sizes might be misleading to the buyer.
- 8. The necessity of eliminating personal prejudices in using the sampling plan was demonstrated.
- 9. Group work produced more ideas and information than independent research
- 10. Pupils proved for their own information the value of measuring inches, ounces, pounds, and of using decimals.
- II They received a better understand-
- 12. Using the project in terms of life situations, pupils found how they could apply school subjects, such as mathematics, to bring about economy in shopping.

Charts were prepared showing price differentials per ounce in leading brands of breakfast cereals. It was found that in the local market the most expensive brand cost almost three times as much per ounce as the least expensive brand.

Other findings were that there was an excessive amount of fine flour in some of the packages, this for some unexplained reason being considered a very serious fault; that some of the packages were inconvenient in shape and size; that in one case there was a lack of uniformity in color, and that there was very little unjustified slack fill.

The most popular breakfast cereal with the class was the second most expensive on the list of those sampled.

Recommendations for use were made by pupils for each brand studied and sampled. With the exception of price differentials, the reports were generally favorable.

Cereal manufacturers may have something here. At least they should have a look at a situation that promises to produce a whole new generation of cerealconsciousness, built presumably upon textbook premises that should be worth looking into. In any case, they may find there's something for them to learn from the school room as well as something they ought to have a hand in teaching there.

2 2 2

The October Doughnut Month idea certainly is catching on. No. we're not going to quote any statisties, though they prove it. What interests us is this collateral and probably unposed evidence of success: The Tailored Woman's new store on Fifth Avenue in New Yawk City is featuring a new fall fashion color called Doughnut Brown-or, to use the official mis-spelling, Donut Brown. By official, we do not mean anything Websterian-we mean only the bright and shining orthography of the National Donnt Committee's thinkerupper of publicity plugs.

2 2 2

BREAD LIKE MOTHER'S.—J T. McGlynn, proprietor of McGlynn's Bakery, Minneapolis, which uses 250 grocery stores and five loop retail shops as outlets, saw this colyumist squib in a local newspaper:

"Theodore Hayes, dean of the amusement business in Minneapolis, lamented the other day about the bread our bakeries give us. 'I know,' he told me, 'that bread you talk about is fresh and all that sort of thing. But, do you know what I'd like? I'd like to get a loaf of honest-to-goodness home-made bread. A loaf like my grandmother used to turn out. A high loaf. I can smell it now as she cautiously took the pans out of the oven and then rubbed butter over its nut-brown crust. If some bakery took the old formula that Grandma used to use and turned out that type of loaf, say just one day a week, I'll bet they'd have tremendous sales.' And Mr. Hayes may have something there."

Mr. McGlynn is quick on the pick-up. His advertising immediately burgeoned

"Mr. Hayes, the renson for this—most all bread these days is made by machines, contains some different ingredients, more water for that extra softness and is baked in steam injected ovens. You cannot make her kind that way. Today's commonplace bread is something different.

"However, there is one baker in Minneapolis with pretty good distribution, who does make that kind of bread you are looking for. It is real hand-made and oven roasted.

"We invite you and the great host of other fellow citizens who are of the same mind as you, to ask for and try Mc-Glynn's (home-style) breads.

"You will find they are quite different and cat with the same gusto as Mother's or Grandma's bread."

This sort of thing seems to be epidemic. If it keeps up we may have to invoke the historic phrase: "Nay, sire, it's revolution."

*The proposed World Calendar divides the year into 91-day quarters, the first month in each quarter having 31 days and the other two 30 days each. The 365th day of the year becomes Year End Day and follows saturday, Dec. 30, each year, as an extra saturday. When there is a Leap Year, the extra day would fall after June 30, again putting two Saturdays in a row. The calendar would remain the same for each year. Each quarter would begin on Funday and end on Saturday. Each quarter would contain 13 weeks. Month dates always would fall on the same week days. Each yearwould have 26 week days plus five Sundays in the first month of the June 14 party of the calendary of the other two. Sach year would begin on Sunday. Year End Day and Leap Year Day would be international holidays.

READY TO BOARD THE CHICAGO BAKERS' COURTESY CLUB'S SPECIAL TRAIN TO NEW YORK

This distinguished group of men was lined up before the camera just before the special train arranged for by the Chicago Bakers Courtesy Club pulled out for the convention of the American Bakers Association in New York. The special train, over the New York Central System, left Chicago the afternoon of Oct, 14, and carried more than 100 passengers. Pictured left to right, are: A. G. Tomlin, Milwaukee Representative, Bear-Stewart Co; J. D. Faulds, Faulds Oven & Equipment Co., Chicago; S. O. Werner, The Northwestern Miller and American Baker, Chicago; F. J. Bergenthal, Red Star Yeast & Products Co., Milwaukee; E. L.

Sikkema, Peter Pan Bakeries, Kalamazoo, Mich; Harry Irle, Armour & Co., Chicago; V. T. Johnson, Wilson & Co., Chicago; A. W. Fosdyke, Read Machinery Co., Chicago; Earl Benedict, Hotel Sherman, Chicago; Roy Nichols, Hotel Sherman, Chicago; A. Beier, Beier's Bakery, Dixon, III; P. E. Minton, American Molasses Co., Chicago; J. H. Debs, Chicago Metallic Mfg. Co., Chicago; R. G. Attridge, Washburn Crosby Co., Chicago; Dr. L. A. Rumsey, W. E. Long Co., Chicago; O. Breault, Brolite Co., Chicago, and J. Schafer, of the Peter Pan Bakeries, Kulamazoo, Mich.

Personal & Otherwise

CHICAGO VISITORS

Among visitors to the Chicago market lost week were: Carl B. Warkentin, president, Midland Flour Milling Co., Kansas City; Fred Borries, president, Ballard & Ballard Co., Inc., Louisville: Frank Coppes, president, Nappanee (Ind.) Milling Co., Inc; George Urban, president, George Urban Milling Co., Buffalo; M. W. Fuhrer, sales manager, Fuhrer-Ford Milling Co., Mount Vernon, Ind; K. L. Burns, president, Glohe Milling Co., Watertown, Wis; Philip H. Postel, president and general manager, Ph. H. Postel Milling Co., Mascoutah, Ill.

CHANGES BUSINESS

C. A. Johnson, who has been in the flour brokerage husiness in Chicago for the past few years, has taken a position as sales supervisor for the Curtis Publishing Co., and will reside in Miami, Fla.

HOME FROM IRELAND

Thomas Coulter, of Coulter & Coulter, Inc., New York flour brokers, returned home on the Georgic last week after a stay of several months in the north of Ireland, lengthened by difficulty in getting return passage early in September as he had planned before sailing.

MANHATTAN GUEST

Blaine Thompson, general manager, Morten Milling Co., Dallas, Texas, was the guest of David Coleman on the New York Produce Exchange last week during a business trip to New York.

VISITS HEADQUARTERS

Robert G. Lockhart, of New York, bakery service man in the East for the Russell-Miller Milling Co., is visiting headquarters in Minneapolis this week.

NORTH CAROLINA VACATION

H. Frank Freeman, recently resigned from the Russell-Miller Milling Co., returned to New York last week from a trip to Minneapolis. He plans to take a short vacation with his wife and child in North Carolina, his former home, and has not yet announced his subsequent plans.

WITH EASTERN TRADE

A. H. Recksteiner, sales manager for the Northwestern Elevator & Mill Co., Toledo, has been visiting eastern markets calling on the trade and mill connections.

MINNEAPOLIS VISITORS

Carl A. Quarnberg, president of the Tri-State Milling Co., Rapid City, S. D., and Stewart N. White, chemist for the company, spent several days in Minneapolis last week, and attended the chemists' and operative millers' meetings Friday and Saturday.

BIRTHDAY

C. C. Bovey, director of General Mills, Inc., Minneapolis, on Oct. 25 observed his 75th birthday anniversary.

NIMROD

While J. Spagnol, Pittsburgh broker, was visiting mill connections in Minneapolis last week, he and some of the officials of the W. J. Jennison Co. went to Appleton to look over the company's mill and, incidentally, do a little pheasant shooting. The party met with success, and no doubt Mr. Spagnol had some "tall" stories to tell his friends when he got back home.

ILLNESS

Frank Archer, Atlanta, southeastern representative for the Acme Mills, Hopkinsville, Ky., is seriously ill in Emory University (Ga.) Hospital.

BAKER PROMOTED

Claude J. Thompson, who began his career in the bakery business as a delivery hoy and for the last five years has been assistant manager of the George Rushton Baking Co., Wichita, Kansas, has been made manager of the Wichita branch. He succeeds Neil Kreeck, who has become part owner of the Peerless Pie Co., Wichita

ita. Mr. Kreeck bought out the pie interests of C. G. Mustoe, who has taken up cattle ranching in southeast Kansas.

OPERATION

Saul Gold, Rocky Mount (N. C.) Bakery, is in a hospital in that city for an operation.

IN BOSTON

George Urban, of the George Urban Milling Co., Buffalo, was in Boston recently. He visited Sands, Taylor & Wood, his firm's representative in that district.

BAGS DEER

John F. Brown, James H. Knowles & Son, Boston, reports bagging a deer on his hunting trip in northern Maine last week. Mrs. Brown made the trip with him.

BACK AT OFFICE

Walter E. Sands, president of Sands, Taylor & Wood, Somerville, Mass, has recovered sufficiently from his recent illness to return to his office.

GULF FISHING

C. A. Jordan, vice president of the Consolidated Flour Mills Co., Wichita, has returned from a four-day vacation at Port Aransas, Texas, where he has been tarpon fishing in the Gulf. Mr. Jordan and his partner hooked five tarpon and landed two. They also caught 125 lbs of red fish.

MILLER'S ESTATE

The estate of the late Fred Wolf, Ellin-wood, Kansas, miller, has been valued at \$150,000. It all goes to his son, Fred Wolf, Jr., manager of the Wolf Milling Co., except approximately \$16,000 left by specific bequest to several relatives.

MARRIED

Robert A. Kipp, second son of Theodore Kipp, president of Kipp-Kelly, Ltd., Winnipeg, was married Oct. 25 to Donalda Catherine Johnston, also of Winnipeg. Until the outbreak of war Mr. Kipp was in London in charge of the company's foreign office business, and he hopes to return to that post when circumstances permit.

AT HOME OFFICE

Mr. and Mrs. Dudley B. Huff, Paterson, N. J., are visiting in Wichita. Mr. Huff is the representative at Paterson of the Wichita Flour Mills Co.

HOME FROM EAST

J. S. Hargett, Oklahoma City, president of the southwestern division of General Mills, Inc., with Mrs. Hargett, returned recently from a trip to New York and Detroit.

SHARES SPOILS

Deer hunting appeared a little too much work for C. C. Kelly, president of the William Kelly Milling Co., Hutchinson, Kansas, home from a vacation in Colorado. He spent his time in the mountain cabin and helped cat venison provided by others in the party, he declared.

IN NASHVILLE

O. A. Church, president of the Noblesville (Ind.) Milling Co., was in Nashville last week calling on the trade with the firm's local representative, Allen Cornelius, of W. R. Cornelius & Son.

Carl Walling, manager of the Southeastern Flour Co., of Murfreesboro, Tenn., was a Nashville visitor. James T. Cole, of the New Milling Co., of Rockford, Tenn., also was a visitor, as was T. L. Brice, Atlanta, southeastern sales manager for the Burrus Mill & Elevator Co.

IN NEW ORLEANS

F. W. Morrison, president of the Morrison Milling Co., Denton, Texas, was a New Orleans visitor this week, calling on the local trade.

LINES MEET

P. H. Baum, secretary-treasurer, and Fred Burrall, general sales supervisor, for the William Kelly Milling Co., Hutch-

TOLEDO BOARD GOES A-GOLFING

Here's only one of the distinguished foursomes comprised of Toledo Board of Trade members who enjoyed themselves at the board's recent Columbus Day outing at the Sunnigdale Golf Club: H. Wallace Applegate, secretary, Mennel Milling Co.: Fred Mayer, grain man and former president of the Toledo board; John H. Bailey, manager. National Milling Branch of National Biseuit Co., and D. L. Norby, manager of the Toledo branch office for Cargill, Inc.

inson, Kansas, left on trips to call on the trade with New York the ultimate destination of each. Mr. Baum will call on connections in the south central states and Mr. Burrall will visit the trade in the north central states.

AUTO ACCIDENT

H. Everett Musser, bakery owner of Somerset, Pa., was sent to the Community Hospital there on Oct. 17 when his car skidded on the highway south of the town and overturned. He sustained several fractured ribs and a broken bone in his left foot as well as painful body bruises.

ATTENDS FUNERAL

E. O. Wright, president, Wisconsin Milling Co., Menomonie, Wis., passed through Chicago, Oct. 28. He was enroute to Philadelphia to attend the funeral of L. A. Kley, vice president of his company, and also his local representative.

LEISURELY TRIP

A. L. Jacobson, manager of the Arnold Milling Co., Sterling, Kansas, and family returned from a lessurely vacation trip through the East, visiting New York, Washington and other points.

SECOND OPERATION

Grant Morris, grain department manager for the Newton (Kansas) Mill & Elevator Co., is doing as well as could be expected after another operation. He has been in a critical condition since an operation several weeks ago.

LICKS FLU BUG

Ben S. Hargis, eastern states sales director for Larabee Flour Mills Co., Kansas City, believed at the end of last week that he had licked the flu bug sufficiently to leave for a trip through his territory. Mr. Hargis spent most of the week at home.

HOME FROM HONEYMOON

Mr. and Mrs. Charles A. Barrows returned to Kansas City Oct. 29 after a three weeks' honeymoon in Colorado and New Mexico. Perfect weather prevailed in the mountains despite the late season. Mr. Barrows is export sales manager for Midland Flour Milling Co.

OBITUARY -

MORRIS BICKER

Morris Bicker, of the Abbott Baking Co., New York City, died on Oct. 13 from injuries received in the plant. He is survived by his wife, a daughter and his son, Irving, general manager of the bakery. He was 60 years old and had been with the company for the past 14 years.

C. DALE JONES

C. Dale Jones, 55, pioneer miller of Utah and Idaho, died Oct. 25 in Salt Lake City following an illness of several months. Mr. Jones was born at Woodvine, Kansas, and entered the milling business with his father at Scattle, Wash, early in life. He engaged in the flour milling business at the Jones Flour Mill at Mahad, Idaho, and at the White Fawn Flour Mill at South Jordan. Funeral services were conducted in Brigham City, Utah.

WILLIAM IRONS

William Irons, familiar figure in the flour milling industry of the Pacific Northwest, passed away at his home in Scattle recently. Death resulted from coronary thrombosis. Mr. Irons in the early years of the present century was with the Hammond Milling Co. Later he became manager of the Puget Sound Flouring Mills Co., a part of the Portland Flouring Mills system. When this was sold to the Sperry Flour Co. Mr. Irons was sent to the Orient. Later he returned to Scattle, opening a grain and export flour business.

REGINALD F. RICHARD

Reginald F. Richard, 55, general manager of the phosphate division of the Monsanto Chemical Co., died of pneumonia at a St. Louis hospital Oct. 25. He was born in Buffalo, N. Y., and was associated with the General Chemical Co. from 1905 to 1933, being general manager at the time he left to join the Swann Chemical Co. The Swann company was acquired by Monsanto in 1935. Surviving are his wife, his mother, two sons and two daughters.

HARRY GLASS, CANADIAN BAG FIRM EXECUTIVE, DIES

Harry Glass, second vice president of the Canadian-Bemis Bag Co., Ltd., died at Vancouver on Oct. 23 after a six months' illness. Cancer of the lungs was the cause of death.

Mr. Glass, who was in his 60th year, was born in Dundee, Scotland, and at the age of three was brought to Montreal, Canada, where his father became employed by the Canadian Bag Co., Ltd. At the age of 20 Mr. Glass went to work for the Canadian company in Montreal. In 1909 he was transferred to the company's Winnipeg plant as a salesman. A year later Mr. Glass was appointed

A year later Mr. Glass was appointed manager of the Winnipeg plant and in 1917 he opened a plant in Vancouver for the Canadian Bag Co. At that time he was appointed western manager of the company, having charge of both the Winnipeg and Vancouver plants.

In 1937 the Vancouver and Winnipeg

COSMOPOLITAN

Sieghert Gudell, who formerly operated his own bukeries in Palestine, Vienna and Danzig, and who was head pustry chef in the Moritz Dobrin, in Berlin, is opening his own French Pastry Shop at 978-980 Bergen Street, Jersey City, in a building now under construction.

plants of the Canadian Bag Co. were amalgamated with the Winnipeg plant of the Bemis Bro Bag Co., the new company being known as the Canadian-Bemis Bag Co., Ltd. Mr. Glass was appointed second vice president of the new company and was also elected a director.

Mr. Glass was well known in the Canadian milling industry and also had immureable friends in the United States.

CHARLES NOLEN WITH LARABEE

Kansas City, Mo.—Charles W. Nolen, for the last several years with Arkansas City (Kansas) Flour Mills Co., as southern representative, has resigned to become Oklahoma and Texas salesman for Larabee Flour Mills Co., Kansas City. He assumed his new duties last week.

He assumed his new duties last week.

Mr. Nolen will sell both family and bakery flour for the Larabee company, which already has a big trade in the South. His home is in Dallas, Texas.

BREAD IS THE STAFF OF LIFE

WILL REBUILD ELEVATOR

EVANSVILLE, IND.—The E. H. Morris elevator, burned here a week ago together with some 50,000 bus of wheat, corn and soybeans, is to be rebuilt as soon as debris can be cleared from the site.

ONE-MAN BAND

Major Edward Bowes' 27,000,000 radio listeners recently heard Frank G. Jungewaelter, secretary of the Associated Retail Bakers of America, do the impersonation of a one-man band that has amused pretty nearly every bakers' convention for years. Mr. Jungewaelter attended the American Bakers' Association convention, and while in New York City stopped in at Major Bowes' studios for an audition. His act—a first class imitation of an old fashioned German beer garden band—so clicked with the radio impresario that he put it on that night's program.

Mr. Jungewaelter told his radio listeners (Coast-to-Coast NBC network) that he was down to a mere 250 lbs, having lost 55 by exercise.

"What exercise?" asked Major Bowes.
"Pushing myself away from the table before I had all I wanted to eat," was the

Major Bowes ruled against Mr. Jungewaelter's desire to tell of his reducing success with a bread diet, but he managed to get in one plug for the baking industry, telling his listeners how many trucks were used. His stunt drew a lot of votes in the weekly contest. There is no truth to the rumor, however, that he has joined Unit No. 6.

NO SCARCITY IN COTTON GOODS FOR FORWARD SALE

In commenting on the present position in the cotton goods market, the Benits Bro. Bag Co. says:

Bro. Bag Co. says:

"The process of digesting the huge volume of business in cotton sheeting which
was entered in September may possibly
prove to be the main activity of the finishing, converting and cutting trades for
some time to come. Prices are steady and
generally unchanged. Although early
goods continue scarce, in the case of a
few of the heavier weight sheetings, and
are commanding premiums, there is almost no business in these early positions.
Mills will sell as far forward as March,
1940, at current prices which show them
a profit.

1940, at current prices which show them a profit.

"Dr. Murchison, president of the Cotton-Textile Institute, is urging cotton mills to avoid long term bookings and three shift operations. He would have the mills maintain normal operating schedules not in excess of two shift operations indefinitely. He would avoid selling beyond 90 days on the general assumption that contracts placed for longer periods are generally speculative. Production is known to be heavy and increasing at the present time, and the possibility of overproduction has already become a nightmare to many.

"However, present cotton goods prices are only comfortably profitable to mills and there is consequently not the likelihood of as serious a break in prices as occurred in 1936-37 when the profit margin on goods rose to excessive levels under the double stimulus of advancing cotton and heavy forward speculation in goods. Today there appears to be little chance of any advance in cotton beyond 10c and the current backlog of bookings, while substantial, is relatively smaller than in that period."

L. A. KLEY, FLOUR MAN OF PHILADELPHIA, IS DEAD

Philadeletta, Pa.—Lewis A. Kley, head of the Kley Flour Co., of Philadelphia, and also vice president of the Wisconsin Milling Co., Menomonie, Wis., died Oct. 26, at the Sacred Heart hospitol in Norristown, Pa. He was 57 years of age and is survived by his widow. Mr. Kley was a director of the Wisconsin Milling Co. and its Philadelphia representative, as well as being vice president. He had been associated with the company since 1907.

DREAD IS THE STAFF OF LIFE-

DILLTH GRAIN SRIPPING SLOW

Dulurit, MINN. Grain shipping was slow during the week, but movement of iron ore is setting a fast pace. Package freighters continue to stay busy in handling flour, feed and other products. Freight rates remain firm, at the top level of the navigation season. They are expected to advance in anticipation of cold weather, thus speeding up grain slupping. Temperatures dipped to a low of 19 above on Oct. 28 and thin ice formed on small lakes in this area. The tight storage situation at the Canadian head of the lakes has led to inquiries about elevator room here and possibility of gram imports from there for accumulation, So far there has been no action on this matter.

FEDERAL AND STATE FLOUR REQUIREMENTS

The Bureau of Supplies and Accounts, Navy Department, Washington, D. C., has announced that it will receive sealed bids, in duplicate, on canned wheat flour for delivery to various east coast points, until 10 a.m., EST, Nov. 15. Quantity desired was not stated.

• DOCTOR'S DAUGHTER •

These three photographs are "stills" from "Doctor's Daughter," an educational food film prepared by Swift & Co. which was previewed for the trade during the convention of the American Bakers Association in New York City. The plot concerns the endeavor of a young advertising man to prove that he is worthy of marrying the daughter of hard-headed, conservative medico. The young man makes an animated film to support the doctor's contention that the normal human body, in addition to rest and exercise, needs only a balanced diet of carboliydrates, proteins, fats, minerals, vitamins and water to keep healthy. The doctor's case against food fuddism is proved and the girl's hand is thereby won. The nutritional value of breadstuffs is emphasized strongly in the film.

THIRD OF WORKERS' MONEY IS SPENT TO FEED FAMILY

In discussing where the dollar from the average workers' pay envelope goes, Commissioner Lubin of the United States Bureau of Labor Statistics reports that food takes 33e out of the typical city workers' dollar, while housing and fuel take almost 25c. "When another 10c goes for clothing, a balance of 22e is left to cover all the other items which enter into family living," Mr. Lubin said

These are the findings of a survey made by the Bureau of Labor Statistics in 42 cities covering 12 months within the period 1934-36. A total of 11,169 families of employed wage earners and clerical workers who had received no relief during the year co-operated with the bureau by giving answers to detailed questions regarding their incomes and expenditures.

This group of families, with at least one employed member and a minimum income of \$500, the lower limit set by the plan of the investigation, averaged \$1,515 per year. However, half of the

families studied had incomes of \$1,158 or less.

The average family, taking all the fam-

ilies studied in the 42 cities as one com-posite, spent a third of its entire income, \$508, for the butcher and baker, the gro cer and dairyman, and at lunch counters and restaurants to purchase the family's

FLOUR CHARACTERISTICS A SUBJECT FOR ADDRESS

CHICAGO, ILL.- W. M. Tinkham, head of the products control, central division Washburn Crosby Co., will be the guest speaker at the dinner meeting of the Chicago Flour Club, to be held the evening of Nov. 16 at the Sherman Hotel. Mr. Tinkham will discuss various types and characteristics of flour.

William Gilbert, a broker member of the club, will also give a short talk on market conditions.

President L. R. Merrill extends an in-

vitation to all members to bring salesmen to this meeting, as he believes Mr. Tinkham's talk should be of great interest to all engaged in selling flour.

DREAD IN THE STAFF OF LIFE NEBRASKA GRAIN DEALERS

CHANGE ASSOCIATION NAME

OMAIIA, NEE-The Independent Nebraska Grain Dealers voted at its annual convention here to change its name to the Nebraska Grain Dealers and Managers Association. Present officers, of whom Gene Binning, Dix, Neb, is president, will hold over until the new organization holds its first meeting next June.

The grain dealers also adopted a resolution calling for lower railroad freight rates to Omaha and the Missouri River so that elevators can handle grain for water shipment when barge navigation begins at Omaha. A minimum reduction of 50% on inbound rates is sought, effeetive as soon as possible.

The dealers predicted that if rates were not reduced they would have to operate their own truck lines or build facilities on the river to stay in business.

DREAD IS THE STAFF OF LIFE

ST. LOUIS MILLERS PLAY

GOLF AT FALL MEETING

Sr. Louis, Mo .- St. Louis Millers Club held its annual fall meeting Oct. 25 at the Glen Echo Country Club. The afternoon was devoted to a golf tournament consisting of a blind bogey of 70-80. First prize was won by Charles Barron, second by Ralph W. Taylor, and third A contest for by P. A. Spragelberg. the nearest ball on a 132-yard hole was won by Ed. Stanard, his ball being within six feet of the pin. Second prize for this feat went to P. C. McGrath and third to L. P. Johnson. The four holes of 3-par contest was taken by Ben Schulein, followed in order by C. Kellenberger, and Walter Krings. There was a large dinner attendance. J. O. Ballard, president, Ballard-Messmore Grain Co., was accepted as a member at the dinner meeting. Attendance prizes were given to Julius Albrecht, J. O. Ballard, Walker Mac Millan, W. R. Tibbets and R. L. Parker. The rest of the evening was taken up with bridge.

INSTITUTE MAKES SURVEY OF WORLD WHEAT STOCKS

A survey of the world wheat stocks from 1890 to 1914 and from 1922 to 1939 has been prepared by the Stanford University Food Research Institute (Wheat Studies, Vol. XVI, No. 2, price 75c). Comparisons between prewar and post war years show a materially higher level of stocks in the postwar period. This is largely attributable to growth of pop-

ulation and to the persistence of an un-precedented world surplus of wheat after the bumper harvest of 1928.

Less important but significant factors were the increase in world trade and the development of Argentina and Australia as major exporters. Tending slightly to offset these influences were the lower postwar level of per capita wheat consumption and the several factors that combined to speed delivery of new crop wheat from farms to consuming centers. The stocks series presented show two

major periods of persistent wheat sur-plus-1893-96 and 1929-35-and five years of notably small stock—1898, 1900, 1925, 1937 and 1938. As com-pared with the prewar period, the two decades since the war have been characterized by much heavier wheat surpluses and less marked wheat shortage SHEAD IS THE STAFF OF LIFE

BAKERS HEAR LECTURER

Victor L. Short, president of the Institute of Human Science, Springfield, Mass., has been engaged by the Retail Master Bakers Association of Western Pennsylvania to deliver a series of three lectures on Nov. 6, 7, and 8 at 8 p. m. in the William Penn Hotel, Pittsburgh. Sales staffs of the member firms are being enrolled for the three talks on "Per

sonality," "Customer Relations" "Mental Efficiency." ------

BUREAU GETTING READY FOR INDUSTRIAL CENSUS

Washington, D. C. Feed manufacturers whose products are valued at more than \$5,000 annually will be visited, beginning Jan. 2, 1940, by census enumera tors whose business it is to collect information for the biennial census of manufactures, as part of the decennial census of 1940. Information to be compiled will cover the year ending Dec. 31, 1939.

Manufacturers will be called upon to state ownership, earnings, salaries, number of employees, types of power machinery used, cost of materials, distribution of sales, and other salient facts as to the nature of their businesses. These facts, incidentally, will be kept confidential by the Bureau of the Census, as provided by certain acts of Congress.

General information to be presented in the census reports will be gathered from manufacturers by means of a "general schedule" form, copies of which will be filled out by firm officials. An "administrative office schedule" form and special schedule forms will also be used in the gathering of information. It is expected that the basic facts of the 1940 census, by states and industries, will be available during 1910, statistics by industrial areas, counties, cities and towns to be published as soon as they are prepared in report form.

Feed manufacturing is only one of approximately 100 industries which the census will cover, including 200,000 establishments. The census of manufactures was first taken in 1810 to cover the previous year. Beginning in 1904, the census was taken at five-year intervals, and since then at two-year intervals

LARGER MARYLAND BAKERY PAYROLL

BALTIMORE, Mn .- September brought about a decrease in employment in the Maryland bakery products industry, but at the same time payrolls in the industry were higher. Compared with August. employment was 1.1% lower and payrolls were 1.2% higher. September employment, however, was 3% higher than in September, 1935, and payrolls were Considering the Baltimore inches trial area as a separate unit, employ-ment was 5% lower and payrolls LICC higher than in August. Compared with previous September, employment was 6% and payrells 3.2% higher

TO AN EMPLOYER

Employees of Procter & Gamble recently dedicated the marble monument here pictured to the memory of the late William Cooper Procter, grandson of William Procter, co-founder of the company. The monument with its surrounding gardens is part of a newly-erected unit at the Ivorydale, Cincinnati, Ohio, plant of the company which includes the recently completed Manufacturing, Administration and Research Building, shown in the center photograph. Mr. Procter, in his many years as executive head of Procter & Gamble, led the organization in establishing movements toward improved employer-employee relations.

Since 1886 some form of profit sharing has been in force for the benefit of employees, and in 1923 a plan for guaranteed year-round employment was put into effect by Mr. Procter. Under this plan, all factory employees who have been with the company for a period of two years are assured of 48 weeks' work per year, regardless of the variations in the husiness curve. A pension, sick hencfit and insurance plan rounds out the firm's labor relations program.

Part of the new building consists of quarters for the Procter & Gamble bakers research department. Offices, laboratories and bakeries comprise the first floor of one section of the new building. The enlarged quarters, shown in the bottom picture, provide individual laboratories for basic research on the chemistry of baking, for deep frying tests, for checkup on the quality control of the company's products and for investigation on problems pertaining to the use of salad oils, coconut oils, and related products.

BREAD PRICE WAR STILL UNSOLVED IN LOS ANGELES

Reports indicate that the bread price war in Los Angeles has not been settled as vet. The Associated Bakers of Southern California, through its secretary, William Francis Ireland, is continuing its campaign to bring about an early settlement of the controversy.

MARKETS IN DETAIL

U.S. FLOUR MARKETS

THE SOUTHWEST

Kunsts City States with the exception of the governors states with the exception of the governors with mills about to sell only about 15% of expacity, compared with 19% the previous week and 35% a year again, and 10% of the previous week and 35% a year again, and 10% of the previous week and 35% a year again, and the previous week and 35% a year again, and the previous week and 10% of the previous with the previous week and the the previous week and the clear that the market would not advance in the face of the heave Canadian early-ever the millers and the Clear and began to look around for small quantities. The price of clear, how-deadle a few round lot nurchass that how the previous week in the previous week in the previous way the previous way that the previous way that the previous with the previous with the previous way
Denver: Little new business developed, prices remain unchanged; both outside and local sales alack; inquiries only fair. Quo-tations Oct. 28 high parent \$5.10, straight \$4.10, spring wheat bailers \$5.10, clear \$4.70

tations Oct. 28. high patent \$5.10, straight \$1.90, spring wheat baisers \$5.10, clear \$1.70.

Texus; One Texas mill secured a round lot of the government booking, but otherwise no improvement in current business; sales still averaxing 150 20% of capacity daily; however, inquiry better. Operations to observe the content of the content

Intelluson: Sales draggy, with inquiry imited. Shipping directions fairly satisfac-ery. Quotations, Kansas City, Oct. 28: fami-ly patent \$5.00, takers patent \$1.75, stand-rd \$150, first clear \$3.90 9.4, jute

Wichita: Trend about steady, with good directions and slow sales. Mills operating from 70 to 1997. Quotations, Oct. 27: bakerra short patent, hard winter, Kansas City, 14 15 9 1.

THE NORTHWEST

Minirupolla: Another unusually quiet week was experienced by syring wheat milling companies. Although they combed the market, they found very few customers ready to buy. The impression prevails that the volume of business done in early September, while on a liberal scale, was not as streat as it was considered at the time, and that there will be a renewal of buying interest before long.

They are encouraged in this belief by the fact that buyers are beginning to report low quotations allegedly made to them. This is usually a preliminary to buying, because they pay no attention to quotations when they are not in the market. Investigation by mills mostly reveals that the so-called quotations referred to grades other than the represented.

quotations referred to grades other than that represented.

There has been a little softening in clear prices. The trade reports much freer offerings of these grades, particularly from the Southwest. In the Northwest, the larger mills are still fairly well oversoid on clears, and prices here have not shown much of any recession.

Tyrections have just about ceased. Buyers and the larger mills are the larger as well as discounted to be the same the contract of the same than the

intertions have just mout teased. Puyers
ust the to lakers as well as disbutors—loaded up during the war scare in
otember, and with everyone in the same

position, these oversupplies are lasting much ionger than expected. It is not a question of the cost of the flour involved hecause, millers say, buyers in some instances have flour that is delinquent that cost them as much as 75° bil under the current market. The sooner this situation rights inself the better about the situation rights traft the better than the control of the sharp advance in milled for prompt shipment. No expert. Even Cubs. for the

for prompt shipment. No export Even Cuba, for the lime be-lug, is uninterested. Shipments are going the control of the control of the control of the cleant for time being. CANADIAN MARKETS

Toronto: Trade in spring wheat flour stow. Buyers well covered by previous heavy buying and not in the market. Delivery instructions on contracts coming in satisfactorily, but no inducement to place further orders as wheat is keeping steady in price. Millers not disposed to force sales, as this has a demoralizing effect on the price of the state of the state of the price of the state of the s

basis f.o.b. Montreal, which means 65c bu, cars, country points.

Montreal: Sales of spring wheat flour in the domestic market slow. Buyers not interested, as they are fully covered and prefer to get their contracts reduced before placing further business. Wheat not going out of the country as rapidly as was expected when war first broke out and the panicky feeling about supplies has died down. No change in millers' lists, Quotations, Oct. 28; top patents 35.60 bbl, seconds 34.85, bakers 34.75, whole wheat flour 34.85, laid, in 35's, juto, delivered Toronto territory, less 16c bbl for spot cash.

Export business in spring wheat flour with the United Kingdom good. Current business through United Stageons and the government business in spring wheat flour with the United Kingdom good. I select a function of London as been placing substantial orders of London as been placing substantial orders of London as been placing to the Scandinavian countries. Also some buying by South American markets, Priess now being based on Canadian ports. Quotations, Oct. 25: copper patents 228 6d Hallfax-St. John, December.

Winter wheat flour in slow demand. Bis-continuous and the buyers cov-plaints being made at the high price of this flour in comparison with springs. A reduc-tion of Lee bid since a week ago Quota-tions, Oct. 28 33.36 bid, in second-hand Jute bear. Source of the continuous
tions, Oct. 28, 33.38 tott, in Section 2015, Montreal freights.

Winnipeg: Demand moderately good as far as western mills concerned, with supplied to the section of the experience of the exper

55.30 per bbl. Jute; seconds \$4.80; second patents to bakers, \$4.70, car lots, basis jute \$2.8x; cottons 10c more.

Vancouver: Most mills in western Canacontinuo busy on orders backed some time continuo busy on orders backed some time terialized within the past corrulate. Second in the case of the latter backed some time terialized within the past torrulation. Second in the case of the latter there has been a picture in very muddled at present, being in about the same position as wheat except in the case of the latter there has been a practically no flour has been listed to be second in the case of the latter there has been a practically no flour has been listed to be second from here on sovernment-provided ships.

Aside from placing some small orders for regular brands, oriental buyers are paying the Pacific the latter part of the week served further to curtail transpacific flour sales in view of high insurance charges and freight rues. Attempts to get back into the formerly lucrative flour market in New Zealand, Canadian millors have just about given up hope because of the persistence of the New Zealand albor sovernment plan to wheat and flour. White a certain quantity of Canadian hard wheat will continue to be imported there, the bakers, with the assistance of the Wheat Research Institute of New Zealand, and learning to use their own four will decrease. At present it is estimated that about 3,000 tons of Canadian four will be imported annually for mixing purposes.

flour will be imported annually for mixing purposes.

Domestic hard wheat flour trade remained dull as an aftermath of the war scare buying splurge of early September. Prices held steady, cash quotation on first patients being \$5.70 for 98's, jutes, with an extra loc for cottons, while bakers patients were quoted at \$5.20. For locally milled imported American soft wheat, the wholesale price is fairly steady at \$5.25 for 88's, cottons.

MILLFEED MARKETS

Quotations Tuesday, Oct. 31

Quotations Tuesday, Oct. 31.

Minneapolis: Demand picked up very materially late in the week, and pickes advanced \$1.50@2 in two days. Millfreed fures, of course, have been gaining in strength for some time, while spot prices lagged. The drouth in the Southwest soems to be largely responsible for the changed situation. Advices from there say that southwestern regularinents will have been admitted by the control of the country of the coun

ages this plant.

Bakeshop Notes

recently installed a new automatic roll brake, sli divider and rounder. Jake Golman man-other equ

The C. & S. Bakery, Kilgore, has purchased a new delivery truck.

Two new wrappers have been installed by the Main Baking Co., of Houston.

All new equipment has been purchased by the Sanitary Bakery in Childress.

Vaughn's Sweet Shop, Big Spring, recently installed an entire bakery shop that included an oven, mixer, dough om page 25.)
brake, slicer, racks, wrapping table and
other equipment.

WASHINGTON

Walter DuBois has purchased an interest with Gene and Paul Hanken in their Sunny Maid Bakery, which was recently opened in the K. P. Building in Pullman.

The Tekoa (Wash.) Bakery has been sold by O. J. Spacek to D. R. Pitt, of Chewalah. The sale included the business, merchandise and stock on hand and equipment, but not the building.

The Brewster (Wash.) Bakery has reopened following important interior remodeling.

The asme of Christy's Bakery has been changed to the Shelton (Wash.) Bakery, Amos and Clement Boudreau announce. They purchased the bakery recently from Harry Christofferson, who had been operating it for the last three years.

Leo O. Smart, of Spokane, has purchased the Davenport (Wash.) Bakery from William and Frances Heimes, who had operated the business since 1926. Mr. Smart has had 18 years' experience.

The Homestead Bakery at Wapato has moved its retail store from the Bower Building to the Rohrer Building on Wapato Avenue, sharing the building with the M & E Cafe.

WISCONSIN

Robert Lampman, of Shell Lake, has purchased the City Bakery on Water Street in Black River Falls, from Hans Dahle, who established the bakery in June.

B. Switzky will open a retail bakery at 1404 West Walnut Street, Milwaukee

The Oscar Hanson family, for many years proprietors of the Morris (Minn.) Bakery, have moved to Portage, where they will take over a bakery business.

Dorothy D. White and Ellen Ransom will open a retail bakery at 1711 East Irving Place, Milwaukee.

A new bread slicer was installed at the Prescott (Wis.) Bakery by Walter Hansen.

Anna Wilger will open a bakery businers at 1734 West Galena Street, Milwaukee.

Mr. and Mrs. Jake Meier, who have been operating the City Bakery in Darlington for the past five years, have purchased a bakery and sweet shop at Brodhead.

Omar Bakeries, Fond du Lac, opened a branch in the J. I. Case Building on South Main Street limits.

The Sparta (Wis.) Bakery in the Stanley Webb Building, was badly damaged by fire recently.

A new and modern home bakery will be opened soon on the South Side in New London by Mr. and Mrs. Peter Blazer, of Green Bay.

The Krueger Bake Shop, 137 Front Street, Beaver Dam, has been sold to Lester Norenberg of this city by Bernard Krueger, who has operated the shop since he acquired it as the Hammerling Bakery. In the future the bakery will operate as the Home Bakery.

WYOMING

D. W. Weaver, formerly employed in a Casper bakery, has purchased the Diamond Bakery at Douglas and will operate it under the name of Douglas Bread & Pastry Shop. He will be assisted by Mrs. Weaver, who is also a baker.

Dale Palmer has remodeled his Big Horn Bakery at Basin and installed a new Harper oven. Open house was held to celebrate the opening of the new plant.

- BREAD IS THE STAFF OF LIFE-

BRANDY SAUCE FOR EXTRA SALES

By MARY GLEESON

BRANDY sauce adds a crowning touch to mince pies, plum puddings or fruit cake served as a pudding. Last Christmas, the H. C. Capwell Co., Oakland, which operates a large bakery, found that many customers were glad to he saved the bother of making their own brandy sauce during the busy holiday season. The same sauce as served in its tearoom and fountain was bottled for over-the-counter selling and featured at 50c for a pint bottle. Bottles of clear, amber colored sauce, attractively labeled, were featured with displays of fruit cakes in the bakery and in the street floor hostess shop. Accompanying cards detailed the uses for the sauce. Many bottles were sold in combination with fruit cakes for holiday gifts.

QUICK ACTION QUESTIONS

Question.—As a precaution against rope, how much vinegar should I use for each 100 lbs of flour?—C.M., lown.

Answer.—Usually about one pint of 90 grain vinegar is used for each 100 lls of flour. It may be necessary to decrease the fermentation time slightly, when using vinegar, in order to decrease the tendency of overnging the sponge or dough.

Question.—When making brake bread, how many times should the dough go through the brake?—I. P., Kansas.

Ansierr.—The number of times a dough should go through a brake depends upon the finished loaf that you desire. Some lakers brake their dough 12 to 18 times, others go as high as 25 or 30 times.

Question. What is the best temperature to have the egg whites for making angel food cakes?—S. P., Nebraska.

Answer.—Experimental work done on this question shows that a temperature of about 70° F. produces the best cakes. Below or above this temperature caused the cakes to have somewhat less volume.

Question.—Why do some bakers use egg whites in the dough for hard water rolls? —N. A., Illinois

Answer.—The addition of egg whites helps to produce a thin, hard crust.

Question.—We use mashed potatoes in our yeast raised doughnuts. Is it pos-

sible to use potato flour, as it is quite a nuisance to boil and must the potatoes:

—R. E., Michigan.

Answer.—If a good quality potato flour is substituted, excellent results should be obtained. Of course, some adjustment will have to be made in the formula as mashed potatoes are quite high in moisture. Extra water would have to be used when using potato flour.

Question.—What is the effect of substituting about 20% egg yolks for whole eggs, when making sponge cakes?—O. T. Washington.

Answer.—The use of part egg yolks in a sponge cake mix will improve the color. A better texture will result and the volume of the baked cake will be increased.

Question.—When making returded rolls, what should the percentage of humidity be in the refrigerator?—B. O. Massachusetts.

Answer.—It seems to be the general opinion that the humidity should be about 85 to 88%.

Question.—We use crumbs in our ginger cookies and find that we do not obtain uniform results. Is there any way we can overcome this trouble?—M. N., Tennessee.

Answer.—Unless you use the same type of crumbs all the time, variation is bound to result. We would suggest that after

DAILY CAPACITY FIVE THOUSAND BARRELS

TOE TO HEEL!

Several dry slices and a four-inch heel are the stale remains of a loaf in the breadbox of a housewife we know.

The family didn't like it—wouldn't eat it—and the housewife will take no more of that brand.

Don't let hungry hordes do this to your bread!

Give them golden loaves they will relish from toe to heel.

Make them with one of these fine flours.

What "Big Jo" Is to the Family Flour Trade—

"Diamond Jo"

is to the Baker who is trying his utmost to make bread that will bring his customers back for more—bread that is outstanding in quality and flavor. After all is said with reference to bread ingredients, it is the flour that really determines the quality of the bread. Expensive improvers, shortenings, sugars, etc., have their place, but back of them all, and the foundation on which they must rest, is the flour. Start with "Diamond Jo" as your foundation and you will have uniformly good bread, repeating customers and good will that has its base in quality.

"Golden Loaf" The Flour with the Doubt and Trouble left out

TENNANT & HOYT COMPANY Lake City, Minn. you have made your dough, you cut out a few cookies and bake them. From the baked sample you can see whether the dough should be made softer or if more leavening should be used. The "Trouble Shooter on Cookies" should be an excellent guide in making the necessary adjustments to produce a uniform product.

Question.—When making checolate marshmallow, I find that as soon as we add the cocoa, the mixture softens down and becomes runny. Have you any suggestions to offer?—K. W., Indiana

Answer.—For this type of marshmallow, you should use a cocoa that is very low in fat. It is possible to huy a cocoa that contains less than 1% fat. Also, do not beat or stir the mixture any longer than necessary after the cocoa has been added.

Question.—We are planning to make salt-rising bread. Should we make our own corn much or do you think we should buy a prepared salt-rising yeast?—L. B., Ohio.

Answer.—It is our experience in making our own corn mush that the results obtained were not very satisfactory. We would suggest that you purchase the prepared salt-rising yeast and you will find that it will save you a lot of grief. This prepared yeast is made under scientific control and we have used it for years with excellent results. Directions for its use are usually found in the container.

Question.—Why do some hakers make the shells for custard pies 24 to 18 hours before filling them?—G. McD., North Dakota,

Answer.—This is done in order to decrease the soakage of the crust. It also decreases the tendency of the crust, due to its absorption, to dry out the filling.

Question.—How much skim milk powder is usually recommended for a quality white loaf of bread?—H. E., Oregon.

Answer.—At least 6% milk solids based on the weight of the flour is recommended. In some shops as high as 12% is used. It has been found that as the milk solids will take on quite a large amount of water, the cost of the finished loaf will not be very much higher.

Question.—How sweet is corn sugar when compared with cane or beet sugar?

—D. F., Minnesota.

Answer.—The sweetening value of corn sugar as compared to cane or beet sugar is rated at about 75 to 78%. In bread doughs, due to the consumption of a large part of sugar during fermentation, it would be quite hard to detect any difference in sweetness in the baked bread.

Question.—We recently bought some rye bread that had a very dark color. What can be used to get this dark color? —P. R., New York.

Answer.—Caramel color is quite often used. Some bakers use a low grade molasses. The use of dark rye flour will also help.

Question.—At a recent convention 1 heard that the pH of a molasses cake should be above 7. Why is this so?—A. J., North Dakota.

Answer.—Molasses cakes should be on the alkaline side so that they will have a good color. On the pH scale, 7 is

neutral. Below 7 is acid and above 7 is alkaline. A molasses cake that has a pH below 7 will have a disagreeable grayish brown crumb color. If the pH is too high, the taste and flavor will be adversely affected.

Question.—When discussing frozen fruit, what is meant by 5 to 1 pack?—G. I., Louisiana.

Answer.—When talking about 5 to 1 pack frozen fruit, it means that 5 lhs of fruit are used with 1 lb of sugar; 3 to 1 pack would refer to 3 lbs fruit and 1 lb sugar.

Question.—We are getting too much oven spring on our bread. What can I do in order to get smaller volume?—N. R. Tevas.

Answer.—You might try using slightly more salt. Replacing part of your hard flour with a weaker flour such as a cake or pastry flour will help. A stiffer dough will usually help hold down excessive spring.

Question.—1s there any objection to using ammonia in French doughnuts?—W. M., Minnesota.

Answer.—Ammonia has a tendency to darken the frying fat used in making French doughnuts. Better doughnuts may be made by using eggs as the only leavening agent.

Question.—When making boiled icing, how can I prevent the graining of my sugar?—D. E., Wisconsin.

Auswer.—There are several things you can do to eliminate this trouble. (1) Replace some of your granulated sugar with invert syrup or honey; (2) add a small

amount of vinegar, cream of tartar or any other edible acid to your boiling sugar; (3) wash down the sides of the kettle, while boiling the sugar, with water; use either a brush of clean cloth to do this; (4) place a cover, loosely, on the kettle; the steam will wash down the sides of the kettle.

Question.—We have quite a bit of powdered egg white on hand. We tried making angel food with it but were not successful. Can you tell us how to make good angel food cakes using the powdered whites?—F. W., Illinois.

Anawor.—Our experience in trying to make angel food using powdered whites has been disappointing. Work is being done on this problem and as soon as satisfactory results are obtained, we will get in touch with you.

Question.—What is the difference between oleomargarine and vegetable margarine?—T. S., Illinois.

Answor.—Oleomargarine is usually made of a combination of animal fats and oleo oil and churning the same in a cultured milk until it has taken on a butterlike flavor. Vegetable margarine is made by churning a vegetable fat such as coconut oil of the right plasticity with cultured milk so as to have it absorb the flavor, some water and the curd of the milk.

Question.—Why do some baking powders contain more starch than others?— G. W., Kansas.

Americer.—Baking powder is composed of baking soda, acid or acids and starch. Due to variation in acid strengths, variation in the starch content is necessary. The amount of baking soda remains the same.

FOR THE SMALL WHOLESALE BAKER: POINT-OF-SALE ADVERTISING

As Told to CHARLES N. TUNNELL by a CLASS "B"
WHOLESALE BAKER

Nour market we are class B bakers. We take this classification because we are not large operators. We have seven routes, in contrast to some class A bakers of our market who have 15 to 60 routes. Bakers of our type in our market receive le lb less for bread than the class A bakers. Generally bakers in our class have a product that does not measure in to the class A bakers' products.

ure up to the class A bakers' products.

Our classification, however, is based more upon the fact that big bakers advertise in a market-wide field, while smaller ones do not. Nevertheless, we have found it just as profitable and logical for the little wholesale baker to advertise as it is for the big fellow—the only difference is that we do not cover the entire market. We must therefore find other media than competitive newspapers and radio programs and place our advertising more directly, so that every dollar will score a bull's-eye.

dollar will score a builts-eye.

We believe that, hefore any baker's advertising will be profitable, he must have a quality product. Even though we are class B bakers, we don't make second rate bread—in fact, our quality compares very well with that produced by major bakers.

Knowing our quality will back us up, we have been successful in reaching our consumers through point-of-purchase advertising, store window displays, women's club groups, package inserts and recipe slips, community newspapers, changeable panel signs for route trucks, occasional radio spot announcements, and by making at least one different type of special loaf or sweet goods to get us into certain preferred stops that would not be open to our pan bread alone.

be open to our pan bread alone.

In the first place, we are thoroughly "sold" on point-of-purchase advertising, for we can use this material in stops that we actually serve with our products. It attracts women when they are in the store and ready to buy bread. Conventional placards that merely claim, "Our bread is better bread," will not win the favor of grocers. We have to relate our product to the grocer's, helping to sell more of his other items before we can win his support and consent in putting up special counter displays and cards, ice box stickers, swinging cards, window treatmers are

streamers, etc. To help the grocer, we designed a series of "Toast of the Town" recipes, accompanying them with store cards and stickers. For the cards, we had oblong strips of heavy paper printed with such suggestions: "Serve Fruit Toast Tonight," "Cinnamon Toast for a Peppy Break-fast," "Hot Milk Toast Is a Treat," "Try a Slice of Honey Toast Before Retiring." These oblong strips were of various colors of paper stock, each 11 inches wide by 12 inches long and printed in bold black letters. These strips were displayed in various grocery stores, strip on the section devoted to dry fruit. one gummed to the refrigerator, one near the spices, and one with the display of honey and preserves. The route sales-men placed these "talking signs" with the permission of the store owners, using thumb tacks to attach them to wooden shelving or cellophane tape to stick them

on fixtures and glass.

We find that most grocers will welcome these talking signs when they actually are placed in various sections to help sell other foods. Thus the average grocer feels that the bread salesman is interested in helping him sell dry fruit, cinnamon and sugar, butter and milk, honey and preserves and such items.

To supplement these signs, we used a series of toast recipes and other good menu suggestions in bread inserts for a long period. By explaining to the grocers that each loaf contained an insert calling for the use of other foods, most of them were more receptive to the signs—some even suggested that these signs be stuck across their entrance doors and on screen door panels.

When our boys find a grocer that refuses to let them place any point-of-sale advertising pieces or make any special display, they put him on a list. Then, as hoss, I follow up on these special grocers—just a good will visit—and explain that I am just checking up my own boys to see how good a job they are doing. Three out of five of the grocers who refused permission to the salesman will go ahead and invite the baker himself to place these talking strips.

Another of our schemes is to work up

Another of our schemes is to work up some really helpful menu leaflets for the grocers to use as package inserts. We use these leaflets mainly for special seasons—and when we use them, we use no bread inserts. The only way grocers and their clerks will take these menu suggestions, actually distributing them, is to make a suitable display near the checking counter where women can take one free. In some instances, grocers see how many companion items are featured in these menus and they are glad to place one in every package they hand to the customer or deliver to the home. Many times when we have some menu slips printed, we also use a "box" or a portion of the printed slip to contain an institutional message to the consumer—boosting the grocer.

One of the hest bread inserts we ever

One of the hest bread inserts we ever used was to break down our formula, telling the consumer the approximate weight and quality of every ingredient in her loaf of bread. Grocers told us that women commented a great deal. Many were surprised that we used milk in bread, that we used fine shortening, and that we used any sugar and a grade of flour that she could be proud to have in her kitchen.

The only radio advertising we have tried has been spot announcements on

An OPPORTUNITY to purchase a book you have wanted for a long time!

At Less Than One-Half Former Price!

Price \$200 per copy, postpaid

Bakers hardly need be told about A. F. Gerhard's "Handbook for Bakers,"—many already have it in their shops, and wherever it is used it is highly commended. It is handsomely bound, as the illustration shows, has 484 pages, with 85 illustrations, completely indexed; it is in understandable language; contains tried and dependable recipes in convenient, permanent form.

"Handbook for Bakers" was first offered for sale through booksellers ten years ago, and has been distributed by thousands to bakeshops all over America. Ten years on the proving grounds of practical baking has not upset its standing as a valuable aid to any baker, experi-

enced or novice.

A limited number of these books remains in our possession, and will be closed out at a price less than half the original and current retail charge of five dollars. This is your opportunity to avail yourself of one of these valuable copies while the stock lasts. Use the order blank because the

Send check with the order and the book will be sent by prepaid parcels post. Keep it and examine it carefully. If you should want to return the book for refund of your remittance, you may do so within five days of its receipt, provided the copy is carefully packed and reaches us in a salable condition.

EVANS MILLING CO. Manufacture Kiln-Dried WHITE CORN PRODUCTS Capacity, 5,000 Bushels some new loaf, a new wrapper or some-thing of a news or limely nature. If a news angle can truthfully be used, we have found that even the small baker can use these announcements. But we do not maintain any regular program.

We have used some community newspapers with fair results; and we have tied in with various community club activities to good advantage. However, we turn down all schemes that are disguised as club sponsored activities. Our best results have been obtained by having a trained hostess in connection with other foods present our product and our story in a dramatized way before church, PTA and such groups of women—or by having an artist who could do crayon drawings of funny characters, as well as draw wheat growing, milling and baking scenes, give some educational talks and demonstrations. Only mentioning our name as sponsors without too much commercialism, we have been able to contact more than half of the school children in the section of our market where we actually distribute our prod-ucts. This is most valuable work, but it has to be done diplomatically, along educational lines.

Although our first love and main interest is our regular white loaf of pan bread, we do use varieties and several special items as a wedge into certain good stops that would not stock our prodgood stops that would not stock our products if we were selling white pan bread alone. For example, we make a coffee cake that is richer—and we think better—than anything in our market in the wholesale trade. These coffee cakes and

cinnamon buns have won us lots of cuscinnamon buns have won us lots of customers who have helped us get into store by their frequent requests for these poducts. We make one variety of bread the sells at a premium. It has a limited unne, but a steady demand. We try to place extra care into the making and merchandising of any variety bread sweet dough product so it will actually open more stops and make more customers for our main bakery line—regular pan bread. pan bread.

SALES STUNT USES CANDID CAMERA

By co-operating with several other merchants in a "candid camera" shopper interest campaign, the Marklin Bakery, St. Louis, Mo., has increased by several times the traffic in and by its location at 8225 North Broadman with reality in solitons. way, and is realizing a very satisfactory increase in cake sales as a result.

The bakery is located in Baden, a suburban shopping center of St. Louis, and Mr. Marklin, together with several other store owners in Baden, conceived the idea of having a photographer mingle with the Saturday afternoon shopping

crowd each week, and take candid shots at random of individual shoppers. As many pictures are taken as there are merchants co-operating in the plan and on Monday, each store mounts a print of one of the pictures on a window plac-ard reading: "Another candid picture of a Baden shopper. If this candid picture is of you, come in and get this gift free."

Each merchant undertakes to furnish a gift of \$2 in value, and the gift is shown in the window with the prize, in the evening after closing, and the card is kept inside the store during shopping hours, to insure store traffic.

This necessitates a visit to each store engaging in the promotion on the part of hopeful shoppers, to see if they can locate a picture of themselves in any of the stores. The cards are kept on display throughout the week, and when the pic-tures are replaced by new ones each Monday, the old ones are mailed to the persons whom they depict, with the compliments of the store.

Marklin's built up a very attractive display of medium sized cakes on the counter on which the card was kept in the day, and backed up the window with a cake display at night; the resulting attention to the cake showing brought a noteworthy increase in counter sales and in orders for special pastries.

According to Mr. Marklin, the campaign has not only increased traffic and trade, but has created an extensive interest in the community, which is resulting in considerable good will. Any group of merchants in a small town or in a community shopping center in a large city can advantageously employ the system, the merchants of Baden believe.

LET'S STRIP THE COMPETITION

By LUTHER H. SAUNDERS

IT has been demonstrated time and again that a sales contest with a strong humorous theme will bring much better results than one affording no laughs or smiles, regardless of how interesting or clever it might be. It was with that observation in mind that Helms

Bakerles, Los Angeles, designed one of the most unusual contests ever held in the baking business-a "strip tease" event.

It was a crazy contest-no doubt about it. The men had a gleeful time stripping mannequins representing leaders of opposing teams. The losers had to attend the banquet which closed the contest dressed as their stripped leader. The crazy features, however, were the very factors that made the contest a success, a hilarious success.

The contest was figured on a point difference between the coach and franchise department weekly averages. The object of the contest was to strip the opposing department by increasing the difference between averages. Since the franchise department normally has a higher average than the coach department, the former spotted the latter \$16 a week.

Standings were figured weekly from sales sheets. The contest was arranged to run 14 weeks, one week for each piece of clothing in an average man's ensemble. For each dollar average gained by the winning side during a week, the mannequin representing the losing side lost one piece of clothing.

The mannequins used were made to order to resemble as closely as possible the heads of the two departments. Each of these started the contest fully dressed, and as the difference in points between the two departments changed, so was their dress changed-removal of one piece of clothing for each dollar lost.

The mannequins were stripped in this

- 11 lower loses cont
- 12 lower losts vest 13 lower loses belt
- \$4 lower loses shirt \$5 lower loses left shoe \$6 lower loses right shoe
- 17 lower loses trousers 18 lower leses left garter

\$9 lower loses left sock \$10 lower loses necktle \$11 lower loses undershirt \$12 lower loses right garter \$13 lower loses right sock \$14 lower loses shorts

The real fun began at the banquet. Members of the losing side were required to attend the banquet in the same state of undress as the mannequin representing their leader. Hilarity waxed strong when photographs were taken of all the banqueters.

Advance interest in the banquet was drummed up by distribution to all routemen of a set of five cards, designed similarly to playing cards. There were four aces and a Joker in each hand. On the front of each card was a humorous illustration of a caveman attired in nothing but a breech cloth. A brief bit of ad vertising copy appeared on the back of each card.

A total of 180 individual prizes were awarded the top men in three divisions in each of the two sales departments. More than \$2,000 was spent on these prizes in addition to extra commissions and bonuses.

Clever promotional work all the way through also was instrumental in making the contest successful. Rules were published in a booklet using the same cover

illustration as that on the playing cards, plus the slogan: "How Stripped I Am! How Stripped I Am! Everybody Knows How Stripped I Am." On the back cover was printed the theme song, "Those Pants of Mine," to be sung to the tune of "Sweet Adeline." It went this way:

> Those pants of mine, Dear pants of mine! All day, dear pants, For thee I pine, In all my dreams Those britches gleam; You're the object of my sales, Dear pants of mine!

"Double Your Money, If You Win!"

D UT you have no chance to win the old shell game from this slicker. You couldn't double your money. You wouldn't try it.

Inferior cake flours, too, may sometimes look like an easy way to raise profits. But you lose with smaller volume, cripples and dissatisfied customers.

For the tender, rich cakes that sell the best today, you need a superior cake flour-one that can carry the load of increased sugar and moisture.

KISMET cake flour will do this every time. It costs very little more than inferior flours and it's cheaper in the long run.

Try It! Ask us about our SPECIAL INTRODUCTORY OFFER.

"LIVE WIRE" YOUR FUTURE BAKERY CUSTOMERS

By FRED E. KUNKEL

If you want to get a personal touch, if you want your sales message to be seen and read, and if you want to talk face to face with every customer (or prospective customer) in your sales teritory, why not do something different?

That, at least, is the business philosophy of one baker who believes in capitalizing on the idea of letting the telegram do it—a new note in merchandising, one with a sales kick. He realizes that the power of the telegram has manifold advantages for merchandising purposes.

It all came about when he opened a new bakery and wanted to find some way of letting people in his neighborhood know in a unique but impressive way, simultaneous with the opening, and in such a manner as to pull immediate results.

Advertising in the newspapers would have told the whole city about it and no doubt would have made nice reading

and heautiful publicity, but people living at the other end of town or five miles away would hardly have been interested in rushing across town to see his new place of business.

On the other hand, a personally written letter (no matter how unique) delivered by the postman, would have just been another sales letter. It might have heen helpful in getting people better acquainted with his new bakery, but then people receive plenty of mail and other advertising literature almost daily, so that one mailing piece would be about the same as another in the end and produce no better results.

He might have put out a handbill—good, bad or indifferent—as most handbills are, of the common garden variety—or he might have shown pictures of his new bakery and told them the whole story in words and pictures, leaving nothing to the imagination, and implanting some sort of desire to come some day, any day, sometime. But a handbill would merely have been dropped from door to

door via a small boy, and the distribution would have been more or less indiffectent and haphazard, so that it would after all have been just another circular, achieving no particular purpose except that of general publicity.

He could have used postcards, or any other form of publicity which is commonly used, but when this baker opened his new bakery, he decided to be different—because "the man who builds a better mousetrap than his neighbor soon has the world at his door."

So he sent each prospective customer a telegram, in the form of a message. He got the addresses from the telephone book.

And thus he attracted unusual attention. He knew the telegraphic sales message was a powerful stinulant to action. Sales letters are common, but telegrams are uncommon. That is why they sell and become a new note in merchandising. There is an urgent demand behind them which compels action. People associate importance with telegrams—they have for years; hence the business psychology for using them. It is the tested method of getting maximum attention value.

The delivery of a telegram is a straight line between the bakery and the customer's home. It gets inside the door, where it is read and given more attention than any other method of communication. It is the most direct nethod—with no time wasted—just exactly as expeditious and effective as all telegrams usually are. And it is an impressive way to merchandise. It is an ambassador of good will, but it also adds an air of importance. It has the power to compel attention and suggest action.

The combination of messenger and telegram is a guaranty that doors will open and that people will accept your sales message. A smartly uniformed messenger boy steps up to the door, rings the bell, and hands the lady of the house a telegram—and presto! the spark is ignited which attracts new business to your bakery.

This baker stepped off on the right foot when he had messenger boys deliver advertising in the form of telegrams-actually addressed to the individual home owner. In other words, he is one of the most up-to-date merchandisers, when it comes to advertising and sales promotion. The same modernism which he used to advertise his new bakery was, of course, carried out in his interior furnishings, plus his salesmanship in all service angles. Why?

Because out of the business doldrums, the depression, have come two facts—the public has changed, and different methods of selling are necessary to meet consumer demand. The live merchandiser, going one step further, uses the telegram to find out quickly what the

public wants, what it will buy and at what price. It is a "finding" medium. Yes, there are plenty of uses for tele-

Yes, there are plenty of uses for telegraphic selling. This is an age of television and speed. The telegram gets there quickly. Of course, the baker whin wishes to use the telegraph for general advertising purposes will not find it nearly as effective as when he uses the telegram to inform his customer (and prospective customers) that on Friday, for one day only, he has certain specials on sale. Announcing the fact by telegram again (1,200 being sent out), the baker who tried it first made more than

For the circulation minded baker, the telegram gets home—the messenger bay is always welcome because he brings a message of importance. Does he wish to test the buying power of his community or the quality of some merchandising appeal? He sends out his telegram and in a very short time finds out just where he stands in his merchandising plan.

The telegraphic message sent out by this baker is in every respect like a regular telegram only it isn't yellow--it's on a pink sheet and printed. But for the average person at home, unused to the daily arrival of the telegram, the caption at the top, "Messenger Service," is enough.

Since it is delivered by a uniformed messenger boy, it has all the appearance of a regular telegram. Naturally, it receives quick attention. People begin to "sit up and take notice." The result was that when this baker opened his new bakery, he played to a full house and started his new venture with plenty of sales.

A telegram sells ideas because naturally importance is immediately attached to any telegram. People actually read it—every word of it—and what he had to say stayed with them. People can sidetrack a letter, but they hesitate a good deal before sidestepping a telegram and its important message.

The best kind of circular or letter may he dropped into the nearest wastebasket because it is the common way to advertise, but a telegram is seen and read. It is as personal as a telephone call or a house-to-house canvass face to face with the individual.

"I have found more importance attaches itself to the telegraphic communication than to any other form of writing," he explained, "so I decided to use it. While it may not be a sensational method of advertising and sales promotion, it can be labeled under the title of result producing merchandising.

"A telegram reaches its objective by the most direct route. It is brief, concise and to the point. It says something in a few well chosen words and says it well, forcefully, convincingly and grippingly so that it has the necessary effect on the recipient."

And this baker did not miss a good hunch when he decided to send all his neighbors within a 10- to 20-block radius the following telegram:

A new bakery opens tomorrow at 5315 Wisconsin Avenue. If convenient we would like to have you call and become one of our first patrons. Come and see us and get acquainted. We have an unusual novelty you will appreciate which is given free on the opening day.

As one of the finest and most complete bakeries in the city we shall feature only the highest quality merchandise. Your phone orders will be promptly attended to. I will be here at all times to serve you personally as well as to extend every possible courtesy.

We are anxious for you to call tomorrow and invite your criticisms and suggestions as to how we can Established 1874

Zeph Himself Says-

Trimming a little metal from the edges of Uncle Sam's coins is known as "sweating" and he puts folks in jail for doing it. "Sweating" flour grades and qualities is just another milling trick.

THE NABORHOOD BAKERY William Ashby Jump, Proprietor,

Of course, this bakery was in the milie eye in the flicker of an eyelash didn't take weeks, months and years to get over the idea that a new baker, had come to the neighborhood—a come munity with plenty of traffic and plenty of fine homes—and he got the business, by telegraph. When he sent all his neighbors a telegram telling them of his new placers, he got results new bakery, he got results.

-DREAD IS THE STAFF OF LIFE

White Cross Bakery, Efficient, Compact

OMBINING large volume with com OMBINING large volume with compact, conomical operation, the new White Cross Bakery of Oakland, Cal., is showing the way to larger profits for this city's independent bakers.

This institution, operated by M. C. Beach and A. B. Hughes, is an old and valued friend to the Oakland public. For 20 years Mr. Beach and Mr. Hughes operated their bakers at the course.

operated their bakery at the corner of Ninth and Washington Streets. And in And in addition they retailed their product at four branches, the Tenth Street Market, at Tenth and Washington Streets, the New City Market at 1225 Washington Street, a store at 1615 Telegraph, and the Market Center at 19th and Telegraph.

And now the new plant at 2781 Tele graph, as modern and up to date as a cellophane package, gives ample evidence of the successful merchandising ability of its owners. Freshness and efficient distribution are the keynotes of this or-ganization. The owners have always beganization and the branches are within this policy. All the branches are within convenient distance of each other, and two deliveries a day are maintained, with the result that all goods are always oven

The White Cross Bakery has always pushed a full line of bakery goods, and Mr. Beach believes this is one of the man factors in its success. Selling the full line is more profitable than an attempt to push a single item, he thinks. "With a small, compact unit it is easy to meet public demand," said Mr. Beach. "If the public taste changes from layer cake, for instance, to some other kind, why, then we can easily change our operations to this type also. And within a few hours. In a larger organization it is not always possible to do this."

The White Cross Bakery is ideally situated to meet this plan of operation All baking activities are taken care of in a space of 100 sq ft. Baking operations are visible from Twenty-seventh Street. and everything is kept spotlessly clean. A large refrigerator is within a few steps of the oven. Refrigerated dough is kept here and if there is a run on any item, replacements can be quickly baked. With this compact set-up it is also possible to keep a careful check on quality, an important feature of White Cross' business.

Although the business of this firm is based on volume, Mr. Beach feels that volume has its drawbacks. "After a man has become accustomed to selling in volume he hates to give it up," he says. "But, speaking comparatively, there is often more profit in smaller sales."

The White Cross staff, which has been with Mr. Beach and Mr. Hughes for years, baked two immense cakes in honor of the new bakery. All workers are nest and clean and are as proud of the new bakery as their employers.

The new White Cross Bakery is a show house of twentieth century merchandising, a powerful sales organization.

THE HOUSE OF SHELLABARGER

SHELLABARGER FLOURS are milled to serve the baker, not to require the baker to serve them.

SHELLABARGER FLOURS are elastic and adaptable with "performance characteristics" that insure satisfaction either when baked straight or in whatever blend you like.

SHELLABARGER FLOURS represent first word bread quality and last word cost economy.

I No "Shellabarger Baker" ever takes a chance.

The Shellabarger Set-Up

- 1. WHEAT SELECTION
 - A. Thirty country elevators assuring use of country-run wheat.
 - B. Favorable transit position of Salina, permitting us to draw wheat from the entire Southwest.
- 2. UNIFORMITY.
 - A. Experimental mill pre-testing of wheat for baking characteristics.
- B. 2,500,000 bushels storage.
- 3. MILLING
 - A. Efficiency of 2,500 barrels daily capacity.
 - B. Versatility of three units.
 - C. Thoroughly modern equipment, maintained up to the minute.

- 4. BAKING RESULTS
 - A. Bakery Service Department, in charge of actual bakery engineer.
 - B. Completely modern analytical and baking laboratory.
 - C. Technical knowledge of what is required to give the best results.
- 5. POLICY
- A. To mill flour to standards of uniform baking characteristics as well as analytical standards.
- B. Quality based on maximum production results at a fair price.

Adaptability: the Secret _{Of} Baking Success

By VERA HENRY

As delightfully feminine as a lace handkerchief is the Lyttle Bake Shop, owned and managed by Mrs. M. K. Lyttle, of Windsor, Ont. It is the cort of shop that makes a customer toss her budget and diet to the winds and go happily berserk over pink and white meringue shells, glazed strawberry tarts, crumpets and beautifully iced cakes.

enkes.
This shop is well illuminated with modernistic lights, air-conditioned and absolutely spottess. Nothing is crowded, yet every inch of space is utilized to give the greatest possible efficiency.

greatest possible efficiency.

It is quite obviously manuaged by someone who enjoys and is proud of her business. Upon the display cases flowers are arranged in lovely low vases; there are pussy-willows in a blue bowl and well arranged sprigs of fresh, green leaves. On one of the rear counters is an unusual white primrose, and near it a beautiful green glass eat. In the cases are many little chian figures, odd disbes, etc. Many of these things belong to the salesgirls, who enjoy using them to decorate the shop.

Mrs. Lyttle makes generous use of

Mrs. Lyttle makes generous use of color in her display cases, especially of pink, always a favorite with women.

800 Barrels Dally

Missouri Soft Wheat Flour Fine Family Flour High Ratio Cake Flour Highly Competitive Location

MARCO MILLS, Inc., Joplin, Missouri

She features a large variety of extraordinary articles, including crisp, little, odd-shaped bridge rolls, pastel-tinted angel food, patty and timbale shells, and an almost amazing variety of tea cake; cookies, etc. In addition to these she carries the regular stand-bys. But these are stand-bys with a difference, for even the simplest cakes are given at least a touch of color contrast, or some other little twist to lift them out of the ordinary. All articles are arranged to create the most effective color scheme.

Besides the regular breads, Mrs. Lyttle carries date and nut, walnut, date salad, cinnamon, orange, and pastel colored bread. The pastel bread is particularly famous. This comes in pink, orchid and green. Like all the Lyttle breads it is of an unusually fine quality, and sells for almost twice the regular price. It is made by adding vegetable coloring to the regular dough mix. It is in addition a very effective form of advertisement. Its clear, delicate coloring and fine texture always draw admiring comment, when it is served at parties. So for has its fame spread that hostesses in near-by towns frequently have it sent by mail.

A considerable portion of this shops sales is "party business." For this reason the high display shelves back of the counters feature elaborately iced cakes for every possible occasion from bon voyaggo to wedding anniversary.

In one of the counter display cases is

In one of the counter display cases is a beautiful patty case, rectangular in shape, about 18" long, with an unusual design on the lid. This is a great favor-

Mrs. M. K. Lyttle Behind the Counter of Her Bakeshap

ite with Windsor hostesses as a centerpiece for buffet lunches.

Completely in keeping with the gleaming showcases are the salesgirls in their neat black dresses and white Peter Pan collars and aprons. These collars and aprons were made and designed by one of the salesgirls, Mrs. Kading.

About once a month Mrs. Lyttle uses

About once a month Mrs. Lyttle uses two tables in the center of the shop for a "Food Parade." Upon these tables are displayed unusual ideas for parties. For instance, the St. Partick's Day display included green meringue shells, several cakes shaped like shamrocks, etc., with appropriate icing, small individual shamrock cakes with names in white icing; checker, roll, shamrock, green hat, etc., sandwiches, made by combining the green and white party breads; mint jelly; cookies decorated with hats, frogs and pipes, tea cakes in an unusual green spun glass container, etc. These tables were decorated with white hyacinths, white tulips and ferms.

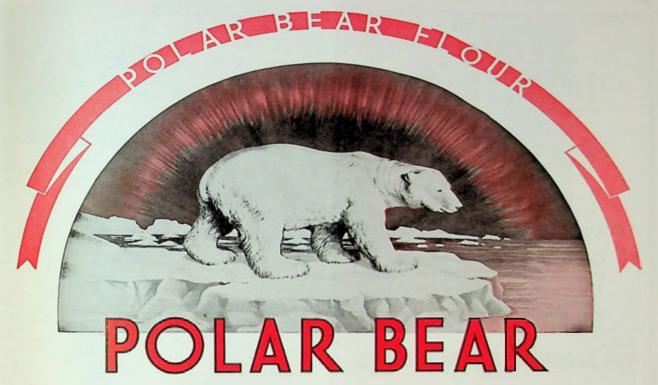

As an outgrowth of the bakeshop, this store now carries a fountain service, with tea cup readings on Tuesday, Wednesday, Thursday and Friday afternoons. Mrs. Lyttle also does entering to order

The street display is as attractive as the interior. Each article is displayed upon a lace doily. In place of shelves Mrs. Lyttle uses unusual wooden stands. These are made something like deep open bookenses, and are about four feel high and two feet wide. They give a clever, modernistic air to the window. In the corner of the window are listed menu suggestions for the day. She always has some unusual article in the center of the window to attract attention. For St. Patrick's Day this was a gay little green pig, in a pig-sty made of chocolate logs.

Mrs. Lyttle advertises both in newspapers and on the radio. She makes her mailing list from the society columns of local newspapers. She believes that in a small city like Windsor, however, the most effective form of advertising is by satisfying customers, who in turn tell their friends.

Mrs. Lyttle modestly refuses to take the credit for her charming, very original store. "These are other people's ideas," she says. "I just adapt them." She takes 14 magazines and studies each carefully for ideas. At least once a week she spends an afternoon visiting bakeshops in near-by towns and cities. Each year she makes trips to New York and Chicago to learn what is being done there.

Mrs. Lyttle gives much of the credit for her success to her 30 employees. "They are as interested in the success of the store as I am," she says. There is a pride in her voice when she speaks of the accomplishments of her employees that is fine to see in a period of labor

FLOURISKING

The Wheat That Grows Right Around Us

This year,—as nearly every year recently,—we have had the good fortune to be at the very center of Kansas' best wheat. We mean both as to size and quality of the crop. This advantage goes to our customers,—not in cheaper flour but in dependably better flour for the same money cost. And POLAR BEAR invites any comparison.

nimenties. Her employees regard her with genuine affection and loyalty. "I've been with her 15 years," one girl said. "In all that time 1 have never known her to be angry, nor to ask anyone to do anything she herself wouldn't be willing to do." difficulties. Her employees regard her

The salesgirls in the Lyttle Bakery voluntarily attend sales classes and lec-tures given by advertising clubs. The men belong to a bakers' club and take advantage of the classes offered by shortening companies and industrial firms. One baker even helps evenings in other

hakeries, learning new ideas.

Even during the summer months this hakery does an enormous volume of business. Some items are dropped, but be using cool-tooking icings and display trims, at the same time by keeping retomers comfortable with air conditioning, business is held up very well.

"I am plensed with what we have

ing, business is field up very well.
"I am pleased with what we have accomplished," Mrs. Lyttle says, "but theris still so much we want to do."
In that eagerness for fresh ideas and

the courage to try them out lies the secret of a splendid, growing business.

ECONOMY THROUGH GOOD DESIGN

THE Homestead Bakery, Oakland, Cal., found the way to economy through simple technical manipulation-by reducing operating time of its trucks with shortened wheel base and

widened tire tread. Now its fleet of 22 trucks, appealing in color scheme and modernized body design, assumes part of

operating costs and upkeep.

The Homestead Bakery wanted a truck with the average 157-inch wheel base body capacity, but one that could be operated with more case and speed in congested traffic. It wanted a unit with "bread appeal." Here's what was

worked out:

A 131-inch wheel base chassis was cut A 131-inch wheel base chassis was cut down to 112 inches, and a cab-over-engine unit was installed. The trend was widened five inches, to provide additional short radius turning. Then a body with 358 cubic feet of space was constructed. Sixty regulation bread trays used in delivery can be placed in this body, or removed, with greater ease than ordinarily, because six does are than ordinarily, because six doors are provided. On both sides and in the rear are double doors.

Time saving starts at the bakery. A

standardized system of loading places certain brands or kinds of bakery prod-ucts in the same location in each truck Regardless of what truck a driver may be operating at any time, when he makes a delivery be opens the right door to get whatever is desired by the customer. It is unnecessary to remove or replace any other item or tray. Stopping time is therefore materially reduced, although a capacity load is carried.

Actual time is also saved in turning— a relatively small matter with one or two trucks, but a big item with 22 trucks and eight hours' operation. By shorten-ing the wheel base to 112 inches and at the same time widening the tread five inches, the large capacity body can be made to "turn on a dime." With a good motive unit kept at maximum operating capacity, a short, quick turn will often climinate a loss of several minutes caused by going around a block or more. A loss of three minutes getting a long truck through heavy traffic, or by going around a block, once to each truck of the fleet, means a time loss of an hour. Eight such turns in a day would mean the loss of one man's time each day. The

Many Standard Packages

were designed along with the

And weren't they the smart new numbers then? Talk of the Town!

But Mr. Ford has made a few improvements since -in line, in color, balance and design.

CABLE ADDRESS: "CENTENNIAL-SEATTLE." All Codes

same time loss feature also exists in same time loss feature also exists in side-parking when delivering. A quick turn into traffic by the slightest move-ment of the steering wheel throws the entire side of the truck into full view of oncoming cars in the same lane. Thus oncoming cars in the same lane. Thus a right of way is actually forced that a longer truck could not obtain because the longer wheel travel is necessary to move the front of the body into traffic. All of the fine points involved were carefully predetermined in this unit, characterized as the "down town" bread truck.

Other longer units utilizing standard wheel bases are also used. The standard 121-inch wheel base carries a 416 cubic foot body with 73 tray capacity, and the 157-inch wheel base chassis, a 174 cubic foot body with 83 tray capacity.

Body design conforming both to the modernistic trend as well as to the basic cab-over-engine unit gives a streamlined effect, provides good straight-away vision and clear visibility when turning. Light glare is somewhat eliminated by the canopy effect cab top which blends into the complete top. Beading around the body

provides a "break" for the color scheme, provides a "preak" for the color scheme, and the streamlining idea is thus accentuated by different front and rear curves. The painting scheme, with the bakery trade emblem and design on the door, on each side, takes away the usual distracting, unsightly appearance of the doors. doors.

Colors were selected to harmonize with the product carried. A rich yellow, al-most orange, covers the lower section of the body below the beading. Above this is a harmonizing rich cream, slightly darker than the usual cream paint color A circle on the door section is a light blue, matching perfectly the actual bread wrapper color design.

A particularly pleasing effect has been developed by omitting the usual company name, street location and telephone number, under the theory that the casual reader will inore readily grasp a message of the distinctive and highly suggestive design. The slightest glance flashes a message: "Homestead Bread—Certified." More careful consideration reveals: "Not One Cheap Ingredient."

Instead of being camouflaged under mass of colors brought about by large letters and a large amount of wording, the straight colors stand out in traffe. The cab-over-engine design, closely molded into a compact part of the body, although not entirely new, is outstanding enough to attract attention.

It seems to me that I can see

Two reasons why some shouldn't.

-Chicago Tribune.

HOT SALESMANSHIP

Not far from the North Pole a traveling Eskimo salesman knocked at the entrance of an igloo. A brother Eskimo answered.

"Would you be interested in an electric fan?" asked the salesman.

"Fan!" echoed the second Eskimo. Why, what would I want with a fan? Do you realize it's 50 below up here?"

The salesman nodded. "That's true," he admitted, "but you never can tell about this weather. Tomorrow it may jump up to zero."—Christian Science Monitor.

UNFORTUNATELY

A lecturer, suspecting that publicity would lessen attendance at repeat per formances, asked the reporter of a local paper not to publish his address

The reporter's version was this: "Mr. Smith delivered an excellent lecture in the church hall. He told some very good

stories, but, unfortunately, they cannot be published."—Christian Science Moni-

PRUCATION AT LEISURE

Student.-Let's cut classes and take in a movie

Second Student .- Can't do it, old man, I need the sleep .- Tiger.

HORSE TRADING

Ezekiel owned a well-known racehorse, for which Cyrus offered him \$10,000.

Zeke accepted the offer and a check, promising to deliver the horse the next day.

Overnight, however, the horse died. But Zeke could not bear to lose his bar-gain, so he cashed the check and sent the horse on.

He heard nothing further and did his best to avoid Cy. Unfortunately, the day came when they met face to face. Zeke took the hull by the horns and asked Cy what had become of the horse.

"Well," said Cy, "when I found it was dead, seeing that everyone knew what a wonderful horse it was, I raffled it, and

Your Company Name

BEMIS DELTASEAL BAGS

The attractive, clean-cut appearance of Bemis Deltaseal Bags has an instant appeal to housewives. And the greater convenience of their quickly formed spout for easy pouring builds repeat business for your

Merchants, too, like Bemis Deltaseal Bags because they stack easily and make sales-building mass, shelf and counter displays.

These Deltaseal advantages help you sell more flour.

Deltaseal Bags are closed on high speed automatic Deltaseal machines which keep pace and fit in efficiently with any bag-filling equipment. Where high speed is not required, manually operated Deltaseal machines are economical and efficient.

Write for further information. No obligation.

BEAUTY

... a specification for fine flour

Careful selection and blending of wheat, correct tempering and proper milling combined to make a quality flour cannot always overcome nature's vagaries.

Today's wheat may readily make it impossible to match the color standard of yesterday's flour. That is why most millers consider Novadel an essential step in the milling process.

NOVADEL-AGENE

AGENE FOR MATURING NOVADEL FOR COLOR

NA-59

Maybe yours IS good but how much BETTER could it be?

"The better the goods, the greater their sale" is true of any business selling to consumers. Shrewd merchandisers know that the first requisite of sales-promotion is a good product . . . the best that can be made.

No doubt you have good merchandise now . . . so has your competition. The real problem is: how much better could that merchandise be? For any improvement will reflect its worth in new sales!

Here's the man with the answer! your General Mills man

"Counsellor in Good Business" would be an apt title for the General Mills man who calls on you.

He is trained in the principles of sound merchandising.

He offers a complete line of superior flours . . . flours that enable you to build utmost quality and consumer appeal into each of your products. He can provide sales-tested formulas for products that give real support to any merchandising plan. And his service includes merchandising and selling *ideas* galore . . . *good* ideas, proved in practise, many in complete "campaign" form.

So—why not "get the answer" from your General Mills man? From flour to sale of finished product, he is trained and equipped to serve you best!
